Interpreting Functions	Kindergarten	<p>I am an elementary art teacher. I am just giving some opinions on the math curriculum. I believe it is an excellent idea to teach common units of instruction in the core subject areas. It is a great benefit for our students across the nation. The "What" we teach is valuable but also the "How" we teach it is just as valuable. You can get a math question correct using different methods, but the quickest, shortest way is usually the best. I read an article recently it had a student showing his math problems to a NASA mathematician who said that he would be fired if it took him all day to work one problem, or if an astronaut needed his help fast, it would be disastrous. It would be mindful to remember that when the "How" is chosen.</p>	Yes	Educator	65608
