Course: Agricultural Science I
Unit: Introduction to Beef Production
Lesson: Introduction to the Beef Industry
Estimated Time: 50 minutes

Student Outcome
Describe the importance of the beef industry in Missouri.

Learning Objectives
1. Describe the importance of the beef industry in Missouri.
2. Explain how the beef industry evolved in the United States.
3. Differentiate between commonly used beef cattle terms.
4. Describe how the segments of the beef industry differ.
5. Identify career opportunities that are available in the beef cattle industry.

Grade Level Expectations

Resources, Supplies & Equipment, and Supplemental Information

Resources
1. PowerPoint Slides
   - Ppt 1 – Beef Cattle Industry Flow Chart
2. Activity Sheets
   - AS 1 – A Career in the Beef Industry

Supplemental Information
1. Internet Sites
### Objective 1

*Discuss the importance of beef cattle to Missouri. Explain that beef cattle convert forage to pounds of beef and that much of the land used for forages cannot be planted for grain production, so cattle production is the best use of this land.*

*Use the Interactive Flash Enhancement “Beef Cow Numbers – Top Ten Counties” to show the top ten beef cow counties in Missouri.*

**Content Outline**

1. Missouri ranks second nationally in total number of beef cows in production.
2. More than 7 percent of U.S. cattle operations are found within the state.
3. More than 4.5 million head of cows and calves are inventoried in Missouri each year.
4. Missouri ranks highly in the production of purebred beef cattle; several nationally recognized herds are located in Missouri.
5. Beef production is scattered statewide, with most of the cows in southwestern Missouri.

### Objective 2

*Describe the evolution of the beef cattle industry in the United States. Discuss the fact that beef cattle are not native to this continent and had to be imported. Point out the importance of beef cattle production in the settlement of the western United States.*

**Content Outline**

1. Christopher Columbus brought the first cattle to the New World on his second voyage.
2. The Spanish introduced the Longhorn breed into Mexico in the early 1500s.
3. The first known purebred breed to be imported was Shorthorns, which were brought to America in the 1780s.
4. Cattle drives brought Longhorn cattle out of Texas to cow towns from which cattle were shipped east.
5. The reduction of buffalo herds and the end of clashes with the Native Americans helped open the Great Plains for beef production.
<table>
<thead>
<tr>
<th>Instructor Directions</th>
<th>Content Outline</th>
</tr>
</thead>
<tbody>
<tr>
<td>6. The fencing of the west with barbed wire led to the improvement of herds that could be managed more easily.</td>
<td></td>
</tr>
<tr>
<td>7. An emphasis on improving herds led to the importation of many modern beef breeds in the 1960s.</td>
<td></td>
</tr>
</tbody>
</table>

**Objective 3**
*Each livestock production system has a unique set of terms. Ask students if there are any beef terms they do not understand.*

**Differentiate between commonly used beef cattle terms.**
1. Steer – castrated male
2. Heifer – young female that has not given birth to a calf
3. Bull – mature male
4. Cow – female that has given birth to a calf
5. Polled – genetically without horns
6. Feeder calf – term used for a male or female animal from weaning until the calf is placed into a feedlot
7. Replacement cattle – bulls and heifers that will be used to add to or replace existing breeding stock
8. Slaughter cattle – steers and heifers between 1,000 and 1,350 pounds that will be processed into beef

**Objective 4**
*Discuss the four major segments of the cattle industry. Point out that Missouri produces many feeder calves that are shipped west to be fed out. Use Ppt 1 to illustrate the four major segments of the cattle industry.*

**Describe how the segments of the beef industry differ.**
1. Purebred breeders produce genetically superior females and herd bulls to be used by commercial cow/calf producers to improve their stock.
2. Cow/calf producers produce steers and heifers, which they may sell at weaning to a backgrounder or feedlot operator as feeder calves.
3. Backgrounders graze the cattle on forages, usually supplemented with small amounts of grain, until they are ready to go to the feedlot.
4. Feedlot operators purchase or custom feed calves from either cow/calf producer or backgrounders; they feed the calves until they are ready for slaughter.

**Objective 5**
*Emphasize the diversity of beef cattle career opportunities. Some careers require only a high school education, while others require advanced degrees and training. Have students use AS 1 to research a career in the beef cattle industry.*

**Identify career opportunities that are available in the beef cattle industry.**
1. Beef cattle producer
2. Ranch manager
3. Artificial insemination technician
4. Livestock order buyer
5. Veterinarian
6. Pharmaceutical sales representative
### Instructor Directions

- *industry and report their findings to the class.*

### Content Outline

<table>
<thead>
<tr>

<tbody>
<tr>
<td>Answers to AS 1</td>
</tr>
<tr>
<td>Answers will vary.</td>
</tr>
</tbody>
</table>

### Other activities

1. Have students research the history of beef production in another country, such as Argentina or Australia.

### Closure/Summary

Though beef cattle are not native to the United States, their production has become very important to the agricultural industry. The beef industry is a vital part of agriculture in Missouri, which is ranked second in the nation in the number of beef cattle and has several nationally recognized purebred herds. Many career opportunities exist in the beef industry for people interested in this field.

### Evaluation: Quiz

A Career in the Beef Industry

Objective: Learn more about the beef industry by conducting an interview with someone in a career related to the industry.

Interview a person with a career in the beef industry. Record his or her name, occupation, and place of employment. Use the questions on this sheet as an aid during the interview. Write down the answers to the questions and any other information that is important. Report about the career to the class.

Name:

Occupation:

Place of Employment:

How long have you worked in your present occupation?

Why did you choose this career?

What training was necessary for this job?

What professional skills do you use?
What jobs have you previously had that helped prepare you for this one?

What other jobs have you considered?

What are your career plans for the future?

What advice would you give someone who is considering a career in this area?

Comments:
EVALUATION

Circle the letter that corresponds to the best answer.

1. Which industry segment is involved solely in grazing cattle on forages and small amounts of grain until the cattle are ready to be fed out?
   a. Cow/calf producers
   b. Purebred producers
   c. Feedlot producers
   d. Backgrounders

2. Where does Missouri rank in beef cattle numbers?
   a. First
   b. Second
   c. Third
   d. Fourth

3. Which industry segment produces genetically superior bulls and heifers to improve stock?
   a. Cow/calf producers
   b. Backgrounders
   c. Purebred producers
   d. Feedlot operators

4. How many cows and calves are inventoried in Missouri each year?
   a. More than 2.5 million
   b. More than 3.5 million
   c. More than 4.5 million
   d. More than 5.5 million
Complete the following short answer questions.

5. Who brought the first cattle to the New World?

6. What are five careers in the beef industry?
   a.
   b.
   c.
   d.
   e.

7. What is the difference between a bull, steer, and heifer?
Student Outcome

Identify the major beef breeds and explain their significance to the beef industry.

Learning Objectives

1. Explain the difference between the *Bos indicus* and *Bos taurus* species of beef cattle.
2. Describe the history and identifying characteristics of beef breeds common in Missouri.
3. Explain factors that influence breed selection.

Grade Level Expectations

SC/LO/1/E/09-11/a

Resources, Supplies & Equipment, and Supplemental Information

Resources

1. Activity Sheets
   - AS 1 - Beef Breeds
   - AS 2 - Researching Beef Breeds
2. *Introduction to Beef Production (Student Reference).* University of Missouri-Columbia: Instructional Materials Laboratory, 1997.

Supplies & Equipment

- Picture of a black breed of cattle other than Angus, such as black Limousin or black Salers
- Picture of a crossbred beef cow

Supplemental Information

1. Internet Sites
2. Print

## Instructor Directions

### Objective 1

Ask students what the main differences are between different breeds that they have seen. Lead into a discussion of the two species of beef cattle, *Bos indicus* and *Bos Taurus*.

**Bos indicus**
1. Originated from Zebu cattle from India
2. Loose skin
3. Large ears
4. Humped
5. Heat resistant
6. Insect resistant

**Bos Taurus**
1. Originated in Europe
2. Tight hides
3. Small ears
4. No humps
5. More tolerant of cold weather

### Objective 2

Ask students how many breeds of cattle they can name. Stress that there are more than 200 breeds worldwide.

Point out that many of the breeds common in Missouri are crossbred to produce calves with desirable characteristics.

Hand out AS 1 and have students fill in the chart as you discuss the history and identifying characteristics of beef breeds common in Missouri.

#### Angus
1. First imported from Scotland by George Grant of Kansas in 1873
2. Black
3. Polled
4. Maternal
5. High quality carcasses with a large degree of marbling

#### Red Angus
1. Red due to a recessive gene in Black Angus

---

## Content Outline

1. Explain the difference between the *Bos indicus* and *Bos taurus* species of beef cattle.
2. Describe the history and identifying characteristics of beef breeds common in Missouri.
3. Explain factors that influence breed selection.
### Instructor Directions

*different beef breeds.*

✍ AS 1 – Beef Breeds

*After completing the lesson, hand out AS 2 and have each student choose a different beef breed association.*

✍ AS 2 – Researching Beef Breeds

### Content Outline

2. Same characteristics as Black Angus

Beefmaster
1. Developed in Texas in 1931 by Tom Lasater
2. ¼ Hereford, ¼ Shorthorn, ½ Brahman
3. Red to almost white in color
4. Horned or polled
5. Good growth rate
6. Hardy
7. Maternal
8. Fertile

Brahman
1. Developed from Zebu cattle from India crossed with several European breeds
2. Gray to black in color
3. Loose hides
4. Large ears
5. Humped
6. Horned
7. Heat resistant
8. Insect resistant

Brangus
1. Developed in the United States in the early 20th century
2. 5/8 Angus, 3/8 Brahman
3. Black
4. Polled
5. Maternal
6. High growth rate
7. Thick carcasses with a minimum of excess fat

Charolais
1. Introduced into the United States by the King Ranch in the 1930s
2. Originally developed in France
3. White
4. Horned or polled
5. Large
6. Heavily muscled
7. Fast growing

**Objective 3**

*Each producer faces a different situation and different needs for cattle. These factors affect the breed type that a particular producer will select.*

1. Needs of the producer
2. Breeds used in the past
3. Available feed and labor resources
4. Goals of the operation
5. Market trends
6. Traits of the breeds

**Application:**

- **AS 1 – Beef Breeds**
  
  Answers to AS 1
  See Objective 2

- **AS 2 – Researching Beef Breeds**
  
  Answers to AS 2
  Answers will vary based upon breed students choose.

**Other Activities:**

1. Show students pictures of the different breeds of cattle discussed in this lesson and have them identify the breed.
2. Have students search the Internet for information on different breeds. Oklahoma State University has a website that covers many breeds.

**Closure/Summary**

The two species of cattle are *Bos indicus* and *Bos taurus*; all breeds of beef cattle belong to one of these two species or are some combination of the two. Many different breeds are found in Missouri. Producers must decide which breed best meets their needs when selecting a breed for production.

Lesson 2: Breeds of Beef Cattle

Name ____________________________

Researching Beef Breeds

Objective: Become more familiar with the various beef breeds.

Obtain the address of one of the major beef breed associations from your instructor. Write a letter to the association requesting information, pictures, videos, etc., for that breed.

When you receive the materials from the breed association, prepare a report for the class. Your report should answer the following questions.

- What is the official name of the breed association?
- What is the history of the breed?
- When was the breed association formed?
- What are the standards for registration?
- What characteristics would disqualify an animal for registration?
- What are the important traits of the breed?
UNIT - INTRODUCTION TO BEEF PRODUCTION

Lesson 2: Breeds of Beef Cattle

EVALUATION

Match the name of the breed on the right with the best description on the left.

_____ 1. Black and polled a. Limousin
_____ 2. Red with white face b. Angus
_____ 3. Originally from Spain c. Longhorn
_____ 4. 1/4 Shorthorn d. Hereford
_____ 5. Originated in France e. Beefmaster

Circle the letter that corresponds to the best answer.

6. Which breed did Henry Clay introduce to America?
   a. Simmental
   b. Hereford
   c. Santa Gertrudis
   d. Shorthorn

7. *Bos indicus* cattle originated in which country?
   a. India
   b. United States
   c. Russia
   d. England
Complete the following short answer questions.

8. What are four breeds that can be black?
   a. 
   b. 
   c. 
   d. 

9. Which two breeds were used to develop the Brangus?
   a. 
   b. 

10. What are two maternal breeds of cattle?
    a. 
    b. 

11. What are two considerations when choosing a breed?
    a. 
    b.

</table>

**Student Outcome**

Utilize the available information to select beef cattle.

**Learning Objectives**

1. Identify the parts of a beef animal.
2. Identify the wholesale cuts of beef.
3. Determine the criteria used in the selection of slaughter and feeder cattle.
4. Determine the criteria used in the selection of breeding cattle.
5. Explain the difference between crossbred and purebred breeding systems.

**Grade Level Expectations**

|-------------------|-------------------|

**Resources, Supplies & Equipment, and Supplemental Information**

**Resources**

1. PowerPoint Slides
   - Ppt 1 – Parts of a Beef Animal
   - Ppt 2 – Wholesale Cuts of Beef
   - Ppt 3 – Thickness
   - Ppt 4 – U.S.D.A. Grades for Feeder Steers
2. Activity Sheets
   - As 1 – Parts of a Beef Animal
   - As 2 – Calculating Adjusted Weaning Weights
   - As 3 – EPDs and the Performance of Limousin Bulls
3. *Introduction to Beef Production (Student Reference).* University of Missouri-Columbia: Instructional Materials Laboratory, 1997.

**Supplies & Equipment**

- Picture of a champion market steer from a major show
**Supplemental Information**

1. **Internet Sites**

2. **Print**
**Interest Approach**

1. Show a picture of a champion market steer from a major show (e.g., the Missouri State Fair) from a trade magazine or semen catalog. Discuss the value that the steer generated and how selection was a key to its success.
2. Allow students to participate in judging contests. Many area, district, and state livestock judging contests are open to agricultural education students.

**Communicate the Learning Objectives**

1. Identify the parts of a beef animal.
2. Identify the wholesale cuts of beef.
3. Determine the criteria used in the selection of slaughter and feeder cattle.
4. Determine the criteria used in the selection of breeding cattle.
5. Explain the difference between crossbred and purebred breeding systems.

---

**Instructor Directions**

**Objective 1**

*Display PPt 1 and pass out AS 1 to students.* While correctly labeling the diagram, discuss the importance of knowing the correct terms for various parts of the beef animal. Confusion can arise from trying to describe an animal using incorrect terminology.

- P Pt 1 – Parts of a Beef Animal

<tr>
<td>1. Frame size</td>
</tr>
</tbody>
</table>
| a. Frame size is determined by looking at height in
**Objective 4**

Ask students why selecting breeding animals carefully is important. Stress that breeding animals will have a long-term impact on a producer’s herd because of females kept as replacements. Have students complete AS 2 and AS 3 after discussing EPDs.

- **AS 2 – Calculating Adjusted Weaning Weights**
- **AS 3 – EPDs and the Performance of Limousin Bulls**

</tr>
<tr>
<td></td>
<td>c. Frame size is based on a prediction of what the live weight of the calf will be when it has 1/2 inch of external fat in the 12th and 13th rib area.</td>
</tr>
</tbody>
</table>

2. Muscling
   a. Feeder steers and heifers may have a muscle score of 1, 2, or 3, with the lower number indicating the more muscular animal.
   b. Scores depend on the animal’s thickness.

Determine the criteria used in the selection of breeding cattle.

1. Skeletal—ease of movement
   a. Taking long strides off both ends of the skeleton
   b. Filling its track
   c. Setting feet down square and wide

2. Volume/capacity
   a. Deep sided
   b. Wide ribbed
   c. Spring or curvature of rib cage

3. Muscling—Heavily muscled

4. Balance
   a. Long bodied
   b. Level topped
   c. Uniform in depth
   d. Stout boned
   e. Clean fronted

5. Performance values
   a. Actual weights—birth weight, weaning weight, yearling weight
   b. Feed to gain rations

6. Frame score—height in relation to age
   a. Males larger than females
   b. Range from one to ten, with five to seven considered ideal

7. EPDs—expected progeny differences
   a. Birth weight (BW) EPD—prediction in pounds of the difference in birth weights
   b. Weaning weight (WW) EPD—prediction of the difference in pounds in weaning weights
   c. Yearling weight (YW) EPD—difference in pounds at one year of age
<table>

</tbody>
</table>

**Objective 5**

Ask students about the importance of proper selection for commercial producers using crossbreeding and for purebred breeders. For which is it more important?

**Explain the difference between crossbred and purebred breeding systems.**

**Crossbred**
1. Crossbreeding is mating in their herd animals of different breeds to take advantage of their different characteristics and produce offspring that display heterosis, or hybrid vigor.
2. Producers buy purebred bulls to use.
3. Most producers sell feeder calves or retain ownership through the feedlot.
4. Daughters of bulls are kept as replacements.

**Purebred**
1. Breeders use registered bulls and females of the same breed to produce bulls and females that will be purchased by other purebred breeders and commercial producers.

**Application:**

AS 1 – Parts of a Beef Animal

Answers to AS 1
1. Poll

#### AS 2 – Calculating Adjusted Weaning Weights

| AS 2 | Content Outline |
| Adjusted Weaning Weights |
| 1. $600 - \frac{75}{180} \times 205 + 75 + 0 = 673$ lbs. |
| 2. $480 - \frac{90}{180} \times 205 + 90 + 20 = 554$ lbs. |
| 3. $390 - \frac{70}{210} \times 205 + 70 + 54 = 436$ lbs. |
| 4. $690 - \frac{80}{210} \times 205 + 80 + 54 = 729$ lbs. |
| 5. $515 - \frac{79}{211} \times 205 + 79 + 40 = 543$ lbs. |

#### AS 3 – EPDs and the Performance of Limousin Bulls

| AS 3 | Content Outline |
| Answers to AS 3 |
| 1. 2, 1, 4, 3 BW EPDs, low to high |
| 2. 3, 4, 1, 2 WW EPDs, high to low |
| 3. 4, 3, 1, 2 YW EPDs, high to low, or fastest growth to slowest growth. Cattle will be over one year of age when sold, so the YW EPD will be expressed. |

#### Other Activities:

1. Use EPD information for a judging class.
2. Show a video on selection and judging.

#### Closure/Summary

Selecting feeder, slaughter, or breeding animals is a complex task. Producers can make wise choices if they keep in mind the traits needed by productive animals.

Calculating Adjusted Weaning Weights

\[
Adjusted \text{ weaning } weight = \frac{actual \text{ weight} - birth \text{ weight}}{age \text{ (days)}} \times 205 + birth \text{ weight} + age \text{ of cow adjustment}
\]

Objective: Calculate adjusted weaning weights.

Using the formula above, calculate the adjusted weaning weights for the calves in the following problems. Round to the nearest pound.

<table>
<thead>
<tr>
<th>Age of Cow Adjustment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Age (Years)</td>
</tr>
<tr>
<td>2</td>
</tr>
<tr>
<td>3</td>
</tr>
<tr>
<td>4</td>
</tr>
<tr>
<td>5-10</td>
</tr>
<tr>
<td>+11</td>
</tr>
</tbody>
</table>

Example: Calculate the adjusted weaning weight for a 200-day-old bull calf from a three-year-old cow. The calf had a birth weight of 80 pounds and now weighs 500 pounds.

\[
\frac{500 - 80}{200} \times 205 + 80 + 40 = 550.5
\]

The calf has an adjusted weaning weight of 551 lbs.

1. A six-month-old heifer calf had a birth weight of 75 pounds and now weighs 600 pounds. The cow was five years old.
2. A 180-day-old bull calf from a twelve-year-old cow currently weighs 480 pounds. Its birth weight was 90 pounds.

3. A two-year-old cow gave birth to a 70-pound heifer calf. The calf now is 210 days old and weighs 390 pounds.

4. A seven-month-old heifer calf with a birth weight of 80 pounds weighs 690 pounds. The cow was two years old at calving.

5. A bull calf from a three-year-old cow had a birth weight of 79 pounds. At 211 days old, it weighs 515 pounds.
Lesson 3: Principles of Beef Cattle Selection

Name ____________________________

**EPDs and the Performance of Limousin Bulls**

**Objective:** Use expected progeny differences to select bulls for breeding.

<table>

<td>+2</td>
</tr>
</tbody>
</table>

Use the information in the table to rank the bulls for breeding purposes.

1. **Rank the Limousin bulls as if you were selecting a bull to breed first-calf heifers.** Explain your answer.

2. **Rank the bulls as if you were purchasing a bull to use for breeding; all calves will be sold at weaning.** Explain your answer.

3. **Rank the Limousin bulls as if you were purchasing a bull to use in your herd.** You currently keep steers and feed them until they reach 1,250 pounds and/or 15 months of age. Explain your answer.
EVALUATION

Write the letter from the diagram in the blank next to the name of that part of the beef animal.

1. _____ Brisket
2. _____ Pin bones
3. _____ Cannon bone
4. _____ Loin
5. _____ Poll
6. _____ Flank
7. _____ Heart girth
8. _____ Dewlap
9. _____ Round
10. _____ Twist
Circle the letter that corresponds to the best answer.

11. Which of the following is not a wholesale cut of beef?
   a. Loin
   b. Round
   c. Flank
   d. Shoulder

12. To have the potential to reach choice grade, slaughter cattle should have how much external fat around the 12th and 13th ribs?
   a. ¼ inch or less
   b. ½ inch or less
   c. ¾ inch or less
   d. 1 inch or less

13. Which of the following muscle scores for feeder cattle indicates the most muscular animal?
   a. 1
   b. 2
   c. 3
   d. 4

Complete the following short answer questions.

14. What are three criteria used in the selection of breeding cattle?
   a. 
   b. 
   c. 

15. Why do producers use crossbred breeding systems?
Estimated Time: 50 minutes

Student Outcome

Compare various beef production systems.

Learning Objectives

1. Determine the facility requirements for the different production systems.
2. Describe how forages are used in each of the production systems.
3. Identify the production costs for beef cattle.
4. Describe how one determines which production system to select.
5. Explain the marketing options available for various production systems.

Grade Level Expectations

Resources, Supplies & Equipment, and Supplemental Information

Resources

1. PowerPoint Slides
   - Ppt 1 – Facilities
2. Activity Sheets

AS 1 – 90-Day Feeder Steer Budget
### Objective 4

Emphasize to the class that beef production is hard work. Point out that large amounts of money can be invested in beef cattle with little guarantee of profit. Describe the importance of assessing individual talents and interests when selecting a production system. Point out that students are better off starting small.

Describe how one determines which production system to select.

| Little experience, capital, labor, and time |
| 1. Backgrounding |
| 2. Small cow/calf operation |
| Some experience, capital, labor, and time |
| 1. Large cow/calf operation |
| 2. Small purebred operation |
| Large amounts of experience, capital, labor, and time |
| 1. Larger purebred operation |
| 2. Feedlot operation |

### Objective 5

List local cattle markets on the board. Ask students if any differences exist between how cattle are marketed today and how they were marketed in the past.

Describe the major terminal markets, such as St. Joseph or the St. Louis stockyard. Discuss the importance of communication and sales skills to purebred breeders.

Explain the marketing options available for various production systems.

#### Cow/Calf producers

1. Auctions, including video auctions
2. Retained ownership—the cow/calf producer owns the cattle through the feedlot until slaughter
3. Livestock order buyer—buyers purchase cattle directly from producers
4. Alliance/marketing group—producers form groups to market like sets of cattle together as a branded or labeled product
5. Cattle futures market—futures contracts are bought and sold to help manage the financial risk involved in production

#### Purebred producers

1. Cattle futures market
2. Private treaty sale—a producer and customer privately negotiate the terms of the sale
3. Consignment auction—a producer entrusts a group of animals to another party, such as a breed association, to be sold for a commission
4. Production sale—one producer or small group of producers sells their animals at an auction that takes place on a farm

#### Backgrounders

1. Cattle futures market
2. Auctions, including video auctions
Feedlot operators
1. Cattle futures market
2. Auctions
3. Direct sales to packers based on the live weight or carcass grade of the cattle

Application:

<table>
<thead>
<tr>
<th>AS 1 – 90-Day Feeder Steer Budget</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Answers to AS 1</strong></td>
</tr>
<tr>
<td><strong>Costs:</strong></td>
</tr>
<tr>
<td>Cattle – 100 steers x 500 lbs. x $.65 per lb = $32,500</td>
</tr>
<tr>
<td>Feed – 10 lbs x 90 days x 100 steers x $.12 per lb = $10,800</td>
</tr>
<tr>
<td>Vaccinations – 100 steers x $3 = $300</td>
</tr>
<tr>
<td>Rent – 100 steers x 3 months x $5 = $1500</td>
</tr>
<tr>
<td>Commission – 99 x $3 = $297</td>
</tr>
</tbody>
</table>

**Total Cost:** $32,500 + $10,800 + $300 + $1500 + $297 = $45,397

**Projected returns:**
99 steers x 635 lbs x $0.66 per lb = $41,490.90

**Profit/Loss:**
$41,490.90 - $45,397 = $-3906.10 (loss)

**Breakeven price:**
\[
\frac{45,397}{99 \times 635} \times 100 \text{ lbs} = \$72.21 \text{ per 100 lbs}
\]

Other activities
1. Have students develop a map and building layout for an extensive beef cattle operation. Students should also research the cost of facilities.
2. Take a field trip to visit a local producer who has a well-planned, usable facility.

Closure/Summary

Production systems vary greatly in terms of the costs and demands placed on the operator. A producer needs to consider these factors when choosing a production system. He or she should keep costs and potential profits in mind when running an operation. One very important factor to consider is the type of facilities needed, because they can be expensive to construct. It is very important that facilities be well planned and usable. Feed costs are also important, using forages effectively is vital. To make a profit, a producer should carefully evaluate the marketing options available and choose the best one.

</tr>
</tbody>
</table>
Objective: Plan a budget covering the costs of raising feeder steers.

A producer is considering buying and backgrounding 100 feeder steers that are 500 lbs each at $.65 per pound. The producer must develop a budget showing projected costs to help decide whether to buy the steers. For 100 lbs of feed grain, the cost is $12.00, and each steer will be fed ten pounds a day for 90 days. The steers are expected to gain 1½ pounds a day. Vaccination charges will be $3.00 a head. Pasture rent is $5.00 a head per month. The producer assumes that one of the steers will be lost due to death before sale. The sale barn charges a commission of $3.00 a head. The steers should sell at $.66 a pound.

Develop a budget showing costs, total cost, projected returns, and profit or loss in the space provided below. Then calculate the breakeven price for the producer. (Round to the nearest cent.)

Costs

Returns
Profit/loss

Breakeven price
UNIT - INTRODUCTION TO BEEF PRODUCTION

Lesson 4: Production Systems

EVALUATION

Circle the letter that corresponds to the best answer.

1. Which of the following expenses is a variable expense?
   
   a. Interest  
   b. Repairs  
   c. Insurance  
   d. Equipment

2. What is a private treaty sale?

   a. A producer sells his or her animals at an auction that takes place on the farm.  
   b. A producer sells his or her cattle through another party, such as a breed association.  
   c. A producer allows a third party to secretly negotiate the terms of a sale.  
   d. A producer and customer privately negotiate the terms of the sale.

3. Which production system requires the fewest facilities?

   a. Cow/calf  
   b. Purebred  
   c. Backgrounding  
   d. Feedlot

4. Which of the following is a fixed expense?

   a. Taxes  
   b. Feed  
   c. Medications  
   d. Facilities
5. Producers with little knowledge of and experience with beef cattle may be best suited for what type of operation?
   a. Feedlots  
   b. Backgrounding  
   c. Small purebred operation  
   d. Large cow/calf operation  

   **Complete the following short answer questions.**

6. What facilities are required for backgrounding cattle?

7. What are three different marketing options available to cow/calf producers?
   a.  
   b.  
   c.  

8. How are forages used by feedlot operators?
Estimated Time
50 minutes

Student Outcome
Develop a herd health plan.

Learning Objectives
1. Identify the common health problems of beef cattle.
2. Determine the type of herd health program used for each production system.
3. Describe the proper techniques for administration of medications and vaccinations.

Grade Level Expectations

Resources, Supplies & Equipment, and Supplemental Information

Resources
1. PowerPoint Slides
   - Ppt 1 – Herd Health Program Based on Spring Calving (March 1 to April 30)
   - Ppt 2 – Routes of Administration
2. Activity Sheets
   - AS 1 – Information about Vaccines

Supplies & Equipment
- Pictures of beef cattle affected by disease
- Different types of animal health care products

Supplemental Information
1. Internet Sites
2. Print

### Interest Approach

1. Show pictures of beef cattle affected by disease. Ask the students to guess what type of disease is affecting the cattle.
2. Bring in different types of animal health care products to begin a discussion.

### Communicate the Learning Objectives

1. Identify the common health problems of beef cattle.
2. Determine the type of herd health program used for each production system.
3. Describe the proper techniques for administration of medications and vaccinations.

**Objective 2**

*Ask students if they have ever helped in vaccinating or treating a calf for a disease. Focus on the importance of proper techniques and a complete herd health program that emphasizes prevention. List the treatments needed for each type of production. Use Ppt 1 to illustrate the timing of vaccinations and treatments for parasites in a spring calving herd.*

Ppt 1 – Herd Health Program Based on Spring Calving (March 1 to April 30)

**Determine the type of herd health program used for each production system.**

**Cow/calf producers and purebred breeders**

1. Feeder calves before weaning
   a. IBR
   b. Parainfluenza (PI-3)
   c. BVD
   d. BRSV
   e. Pasteurella
   f. Clostridial diseases (blackleg)
   g. External parasites
   h. Internal parasites

2. Replacement bulls and heifers—vaccinations usually given 30 days before breeding
   a. BVD
   b. IBR
   c. PI-3
   d. Leptospirosis
   e. Vibriosis
   f. Hemophilus pneumonia
   g. Pasteurella

8. Internal parasites

**Objective 3**

*Have students think about the types of shots they have received.* Display PPt 2 and discuss the various methods of administering vaccines and other health products to animals. Emphasize that subcutaneous injections should be used whenever possible. Describe how a subcutaneous injection prevents tissue damage to the muscle of the calf.

- **PPt 2 – Routes of Administration**

  *Give students a veterinary supply catalog, such as the Jeffers catalog, and have them complete AS 1.*

  Describe the proper techniques for administration of medications and vaccinations.

  1. Intramuscular (IM) — made into the muscle; should be given in the neck
  2. Subcutaneous (Sub-Q) — given between the skin and muscle; should be given in the loose skin of the neck
  3. Oral or drench — administered by mouth
  4. Intranasal (IN) — sprayed into the nasal cavity
  5. Intravenous (IV) — administered into the jugular vein

EVALUATION

Circle the letter that corresponds to the best answer.

1. Diarrhea is a symptom of which of the following diseases?
   a. BVD
   b. IBR
   c. Shipping fever
   d. Pinkeye

2. Which of the following routes of administration is recommended when giving injectable vaccines?
   a. Intramuscular
   b. Subcutaneous
   c. Drench
   d. Intravenous

3. Which of the following diseases does not cause abortions?
   a. Brucellosis
   b. Vibriosis
   c. Leptospirosis
   d. Blackleg

Complete the following short answer questions.

4. How is an intranasal vaccine administered?

5. What are four diseases against which a feeder calf should be vaccinated?
   a. 
   b. 
   c. 
   d. 
Course: Agricultural Science I
Unit: Introduction to Beef Production
Lesson: Herd Management
Estimated Time: 50 minutes

Student Outcome
Explain management factors important to profitable beef production.

Learning Objectives
1. Describe how nutrition affects herd health.
2. Explain the factors to consider in reproductive management.
3. Describe the identification methods for beef cattle.

Grade Level Expectations
SC/LO/1/B/09-11/b SC/ST/1/B/09-11/a SC/ST/1/C/09-11/a

Resources, Supplies & Equipment, and Supplemental Information

Resources
1. PowerPoint Slides
   - PPt 1 – Gestation Table
2. Activity Sheets
   - AS 1 – Herd Management Calendar

Supplemental Information
1. Internet Sites
2. Print
3. Electronic Media
Interest Approach

Ask students when herd bulls should be turned out with the cows to have calving begin on March 1 and end on April 30. Discuss their answers. Point out that beef cows have a gestation length between 280 and 290 days. Also, focus on the fact that cows will not experience estrus until 60 to 90 days after the birth of the calf.

Communicate the Learning Objectives

1. Describe how nutrition affects herd health.
2. Explain the factors to consider in reproductive management.
3. Describe the identification methods for beef cattle.

</tr>
</tbody>
</table>

**Objective 3**

Ask students how someone who is unfamiliar with a herd could find a sick animal in a group of cattle that have no form of identification. Discuss the various identification methods.

Describe the identification methods for beef cattle.

- Ear tags—plastic tags that hang in the ear of the animal; can be removed if necessary
- Tattoos—permanent form of identification in which numbers and a herd prefix are tattooed in the ear of the animal
- Brands
  1. Fire brands—method of identification in which a hot branding iron is used to burn a number or symbol into the hide permanently
  2. Freeze brands—permanent method of identification in which a branded iron is placed in liquid nitrogen or dry ice and alcohol and then used to brand the calf; grows back with white hair

**Application:**

- AS 1 – Herd Management
  - Calendar
    - Answers to AS 1
      - Use PPt 1 - Gestation Table as a basis for evaluating student answers.
  - Other activities:
    1. Bring in different types of ear tags and an ear gun/tagger and let the students practice applying the tags to cardboard cutouts of an ear.
    2. Take a field trip to a local beef producer and let the students practice body condition scoring cows using the body condition scoring poster available from the Missouri Farmers Association.

**Closure/Summary**

Several factors are important in managing beef cattle effectively. Cattle require proper nutrition to maximize production and remain healthy. Reproduction should be managed closely to ensure reproductive efficiency. Proper identification is necessary for record keeping purposes.

</tbody>
</table>
Herd Management Calendar

Objective: Plan a herd management calendar.

Suppose that you have been asked to manage a herd of 100 cows. The producer currently allows bulls to run with the cow herd all year, and the cows calve year round. The producer has been noticing a decrease in the number of calves born over the last several years and has had problems putting together large sets of calves that are similar in size for sale.

Using the table provided, form a detailed plan for managing the herd more effectively. Give dates where applicable.

EVALUATION

Circle the letter that corresponds to the best answer.

1. Nutritional needs are increased for all of the following except:
   a. Growth.
   b. Gestation.
   c. Lactation.
   d. Maintenance.

2. How long should the calving season be?
   a. 60 days
   b. 100 days
   c. Three months
   d. Does not matter

Complete the following short answer questions.

3. What should be done with bulls that fail breeding soundness exams? Why?

4. Balanced diets for beef cattle contain several components. What are four of the components?
   a.
   b.
   c.
   d.
5. How do freeze branding and fire branding differ?
Student Outcome

Evaluate concerns of the beef industry.

Learning Objectives

1. Identify consumer concerns about the beef industry.
2. Explain the difference between animal rights and animal welfare.
3. Explain how the beef industry is addressing consumer concerns.

Grade Level Expectations

Resources, Supplies & Equipment, and Supplemental Information

Resources

1. Activity Sheets
   - AS 1 – Debating Animal Rights Versus Animal Welfare
2. Introduction to Beef Production (Student Reference). University of Missouri-Columbia: Instructional Materials Laboratory, 1997.

Supplemental Information

1. Internet Sites
### Interest Approach

Ask students to discuss what the term animal welfare means to them.

### Communicate the Learning Objectives

1. Identify consumer concerns about the beef industry.
2. Explain the difference between animal rights and animal welfare.
3. Explain how the beef industry is addressing consumer concerns.

<table>
<thead>
<tr>
<th>Instructor Directions</th>
<th>Content Outline</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Objective 1</strong></td>
<td></td>
</tr>
<tr>
<td><em>Ask students what concerns consumers have about beef cattle and beef cattle production.</em></td>
<td>Identify consumer concerns about the beef industry.</td>
</tr>
<tr>
<td></td>
<td>1. Food safety — Consumers are becoming increasingly concerned with bacterial and chemical contaminants and residues from growth hormones and antibiotics left in meat.</td>
</tr>
<tr>
<td></td>
<td>2. Environmental concerns — The American public is concerned with environmental issues, such as the pollution of groundwater and the overgrazing of public lands in the west.</td>
</tr>
<tr>
<td></td>
<td>3. Ethics — Cases of unethical showring practices, especially centering around ownership and the illegal use of performance-enhancing steroids, have attracted attention.</td>
</tr>
<tr>
<td></td>
<td>4. Animal rights — Some groups feel that animals have the same rights as humans.</td>
</tr>
<tr>
<td><strong>Objective 2</strong></td>
<td>Explain the difference between animal rights and animal welfare.</td>
</tr>
<tr>
<td><em>Make two columns on the board and write down the differences between animal rights and animal welfare.</em></td>
<td>Animal rights</td>
</tr>
<tr>
<td></td>
<td>1. Animal rights activists feel that animals have rights and should not be used for food or research.</td>
</tr>
<tr>
<td></td>
<td>2. Castration, dehorning, and vaccinations are all viewed as inhumane because they alter the animal from its original state and because many of them are done without anesthetics.</td>
</tr>
<tr>
<td></td>
<td>Animal welfare</td>
</tr>
<tr>
<td></td>
<td>1. Animal welfare is a concern for the well-being of animals used by humans.</td>
</tr>
<tr>
<td></td>
<td>2. Producers are responsible for providing the food and shelter necessary for the animal.</td>
</tr>
<tr>
<td></td>
<td>3. Most producers are in fact concerned with animal welfare.</td>
</tr>
</tbody>
</table>
Objective 3

Have students focus on what can or should be done to address these concerns. Focus on the need to educate producers and consumers about beef production.

After the discussion, have students carry out the debate outlined on AS 1. Divide the class into two groups – one supporting animal rights and the other advocating animal welfare. Allow the groups to research the subject in preparation for the debate. Moderate the debate for the students.

AS 1 – Debating Animal Rights Versus Animal Welfare

Explain how the beef industry is addressing consumer concerns.

Food safety
1. Local, state, and national cattlemen’s associations have developed programs that focus on correcting practices that might trouble consumers.
   a. The Missouri Cattlemen’s Association sponsors the Beef Quality Assurance Program with the goal of making producers aware of the issues that affect the safety and wholesomeness of beef.
   b. The Beef Quality Assurance Program aims at educating producers about proper management practices, proper record keeping for drug usage, details about various growth hormones and vaccines used in beef cattle production, and correct usage, dosage, and withdrawal times for hormones and vaccines.
2. USDA inspection program to reduce bacterial contamination focuses on bacterial counts rather than visual inspection.

Environment
1. The National Cattlemen’s Beef Association presents several Environmental Stewardship Awards annually to producers who use innovative methods to protect natural resources.
2. The Association’s publications for consumers emphasize that beef production is environmentally friendly.

Ethics
1. A major focus of many 4-H and FFA leaders has been to educate young people and their parents on the damaging impact of unethical showing practices.
2. The Missouri State Fair has adopted the National Code of Show Ring Ethics formulated by the International Association of Fairs and Expositions; exhibitors must sign a form that guarantees that they will not violate the code, and if they do, they forfeit any prizes won and may be barred from exhibiting their animals.
Animal welfare
1. The Beef Quality Assurance Program gives guidelines on how to handle and care for animals.
2. The Missouri Beef Quality Assurance Program manual includes a Code of Ethics that stresses the humane treatment of cattle.
3. Producers have relied on these industry associations to get the word out to consumers that beef producers care for the welfare of their animals.

| Application: | Answers to AS 1
Answers will vary and student participation should be accounted for. |
| --- | --- |
| AS 1 – Debating Animal Rights Versus Animal Welfare | Other activities:
Show students the videos Cattlemen Care About the Environment (7 minutes), Cattlemen Care About Animal Welfare (10 minutes), and Cattlemen Care About Beef Safety (12 minutes). |

| Closure/Summary | Producers must focus on addressing the concerns of consumers. Beef cattle producers must assure consumers that the beef they consume is a safe and wholesome product that was produced humanely and in a way that did not harm the environment. Producers must also concentrate on behaving ethically, especially in showring activities. |

| Evaluation: Quiz | Answers:
1. d
2. b
3. a
4. c
5. Animal welfare is a concern for the well-being of animals used by humans. Producers are responsible for providing food and shelter necessary for the animal. Animal rights activists feel that animals have the same inborn rights as humans and should not be used for food or research.
6. The goal of the Beef Quality Assurance Program is to make producers aware of issues that affect the safety and wholesomeness of beef. |
Objective: Explore issues surrounding beef production.

The class will debate about animal rights and animal welfare. The instructor will assign you to a group to argue one position or the other. Use any available resources to find information that supports your argument. Your research should answer the following questions.

- What do people mean when they use the words “animal rights?”
- What does the term “animal welfare” mean?
- What has prompted discussion about animal rights and animal welfare?
- How have animal rights and animal welfare affected agriculture?

When you have completed researching your position, the instructor will moderate the debate.
UNIT – INTRODUCTION TO BEEF PRODUCTION  Name __________________________

Lesson 7: Industry Concerns  Date __________________________

EVALUATION

Circle the letter that corresponds to the best answer.

1. Which of the following is not a food safety concern of consumers?
   a. Bacterial contamination of beef products
   b. Residues in beef from antibiotics
   c. Hormone residues in their meat
   d. The right of cattle to receive medicines

2. What is one way that the concern about unethical behavior in the showring is being addressed?
   a. Passing federal laws that make all unethical showring practices illegal
   b. Educating young people about ethical issues through 4-H and FFA
   c. Emphasizing the need to spread information about animal rights to producers
   d. Educating consumers about how cattle are shown in the ring

3. Which of the following topics is addressed in the Beef Quality Assurance program sponsored by the Missouri Cattlemen’s Association?
   a. Details about growth hormones and vaccines
   b. Unethical medical practices in the showring
   c. How medications used on cattle affect the environment
   d. The practice of working cattle unethically

4. Which of the following is an environmental concern held by consumers?
   a. The right of cattle to good grazing areas
   b. Overgrazing of private farmland
   c. Pollution of ground water
   d. How medications used on cattle affect the environment
Complete the following short answer questions.

5. What is the difference between animal welfare and animal rights?

6. What is the goal of the Beef Quality Assurance Program?
Agricultural Science I

Curriculum Guide: Introduction to Beef Production

Unit Objective:
Students will demonstrate an understanding of basic principles of beef production by comparing and contrasting the management options applied by regional beef producers and presenting their findings in an oral report.

Show-Me Standards: 2.1, CA6

References:
Individual breed associations

Instructional Strategies/Activities:
• Students will engage in study questions in lessons 1 through 7.
• Students will complete AS 1.1, A Career in the Beef Industry; and AS 6.1, Herd Management Calendar.
• Additional activities that relate to the unit objective can be found under the heading “Other Activities” in the following location: p. 55 (1, 2).

Performance-Based Assessment:
Students will work in groups to compare and contrast the management options applied by beef producers in their area. Each group will interview a different beef producer to learn about the operation and the management techniques the producer prefers and why. Following the interviews, groups will be paired to compare and contrast their findings. The groups will present their findings to the class in a brief oral report.

Assessment will be based on the overall content and presentation of the report. At the instructor’s discretion students will contribute to the assessment process by providing a brief evaluation of the performance of the other members of their group.
Introduction to Beef Production
Instructor Guide

The instructor should assign the performance-based assessment activity at the beginning of the unit. Students will work toward completing the activity as they progress through the unit lessons. The assessment activity will be due at the completion of the unit.

1. Prior to assigning the performance-based assessment, contact beef producers in the area and develop a list of producers willing to be interviewed by students.
   a. It is preferable to have more producers, rather than fewer, if possible, because this will provide more opportunity for varied management styles and will help ensure a sufficient number of producers in case any must later cancel the interview.
   b. Additional sources for interview subjects or information on beef management could include the following.
      ❏ Upper-level students involved in beef production
      ❏ Individual breed associations

2. Divide the class into an even number of groups and assign each group one of the beef producers to interview. If preferred, arrange for telephone interviews with producers or have them attend class for a panel discussion.

3. Lead students in a discussion to develop a uniform interview questionnaire. A uniform questionnaire is important because students will be comparing and contrasting the information they collect. Use questions from AS 1.1, A Career in the Beef Industry, as a starting point, if desired.

4. Have students interview their assigned producer about his or her beef operation and management techniques.

5. Following the interviews, pair up groups to discuss how the two operations are similar and different. Each group will present its findings to the class in a brief oral report.
   a. Explain that the pairs of groups should discuss their presentations so that their reports work together to provide a clear and thorough picture of the two operations rather than present the same information.
   b. Students should be prepared to answer questions about their reports.
6. If desired, have students contribute to the assessment process by completing a short evaluation of the performance of each member of their original group. A peer evaluation form is included following the scoring guide.
   a. Have students complete the peer evaluation form by following the instructions listed at the top. Students should base their assessment on how much each person contributed to the project.
   b. If tasks are divided so that students do only one type of task to contribute to the project, have students adjust their peer evaluation form by disregarding the category that does not apply to a particular teammate. Instead of assessing teammates on two categories worth 0 to 3 points, students will assess teammates on one category worth 0 to 6 points.
   c. To determine the final peer evaluation score, add up the scores that a student receives from the other members of the group and divide the total by the number of scores received. The maximum number of points possible for each student is 6.

7. The final assessment score will be based on the overall content and presentation of the report and the final peer evaluation score.
Introduction to Beef Production
Student Handout

1. The instructor will divide the class into groups and provide each group with the name of a beef producer.

2. Your group will interview the producer about his or her beef operation and management techniques.

3. Following the interviews, your group will meet with another group to discuss how the two operations are similar and different.

4. Present your findings to the class in a brief oral report. Remember that your group’s report should work with the other group’s report to provide a clear and thorough picture of the two operations rather than present the same information.

5. Be prepared to answer questions from your instructor and classmates regarding your report.

6. If requested, you will contribute to the assessment process by completing a short evaluation of each member of your original group’s performance in conducting the interview and making the presentation.
   a. When the project is complete, fill out the peer evaluation score sheet.
   b. Give the completed score sheet to your instructor.

7. Your final assessment score will be based on the content and presentation of your report and your final peer evaluation score.

**TOTAL** 6 pts. maximum

**Final Assessment Total ________/100 pts.**

**Comments:**
Introduction to Beef Production
Peer Evaluation

Write your name on the line above. Fill in the names of your teammates in the spaces provided below. For each category listed below, give each teammate a score from 0 to 3 based on his or her contribution to the project. Use the following guide.

- 0 — no contribution
- 1 — minimal contribution
- 2 — average contribution
- 3 — excellent contribution

Add the person’s score in each category and place the total in the column at the right. Give the completed score sheet to your instructor.

Project development includes tasks such as conducting interviews and doing research. Project completion includes assembling or presenting the project. If tasks are divided so that you or your teammates do only one type of task to contribute to the project, consult the instructor about how to adjust your evaluation form.
