TABLE OF CONTENTS

List of Tables	vii
List of Figures	xvii
List of Abbreviations	xix
Executive Summary	1
E.1 Background	1
E.2 Administration	1
E.3 Student Performance	2
E.4 Evidence Supporting the Validity of Inferences from the MO EOC Assessment Scores	2
Chapter 1: Introduction	7
1.1 History of Missouri’s End-of-Course Assessments	7
1.2 Brief Description of Missouri’s Current Assessment System	9
1.3 Summary of the MO EOC Assessments	9
1.4 Testing, Reporting, and Accountability	10
1.5 MO EOC Assessments Organizational Support	11
1.6 Purpose of the Technical Report	12
Chapter 2: Test Development	15
2.1 Introduction	15
2.2 Design of the MO EOC Assessments	15
2.3 Test Blueprints	17
2.4 Test Specifications	20
2.5 Development of Test Items	49
2.6 Test Form Assembly	53
2.7 Braille and Large Print Versions	55
2.8 Online Forms Construction	56
2.9 Quality Control for Test Construction	56
2.10 Summary	57

Chapter 3: Achievement-Level Setting	58
3.1 Introduction	58
3.2 Goal of the Standard Setting	58
3.3 Overview of the Standard Setting	58
3.4 Staff and Participants	58
3.5 Overview of Standard-Setting Activities	62
3.6 Specific Standard-Setting Activities	63
3.7 Session Results by Panel and Round	68
3.8 Results of Participant Evaluations	70
Chapter 4: Item Analysis	72
4.1 Introduction	72
4.2 Analysis of Forms for Each End-of-Course Assessment	72
4.3 Speededness	88
4.4 Item Bias Statistics	88
4.5 Summary	94
Chapter 5: Test Administration	96
5.1 Introduction	96
5.2 Students for Whom the EOC Assessments Are Appropriate	96
5.3 Students for Whom a School or District is Accountable	90
5.4 Dissemination of Testing Materials and Information	97
5.5 District and Test Examiner Training	97
5.6 Test Security	98
5.7 Test Administration	98
5.8 Accommodations and Modifications	102
5.9 Materials Handling and Return	104
5.10 Summary	105
Chapter 6: Scanning, Scoring, and Quality Control Procedures	106
6.1 Introduction	106
6.2 Quality Control Overview	106
6.3 Preparation and Materials Check-In	106
6.4 Materials Scanning	107

6.5	Summary	108
Chapter 7: Scaling and Equating		110
7.1	Introduction	110
7.2	Item Response Theory	110
7.3	Scaling and Equating	111
Chapter 8: Reporting		180
8.1	Introduction	180
8.2	Individual Student Report	181
8.3	Student Score Label	183
8.4	Online Crystal Reports	183
Chapter 9: Summary Statistics		187
9.1	Introduction	187
9.2	Descriptive Statistics for Total Raw Score	187
9.3	Descriptive Statistics for Total Raw Score by Cluster	188
9.4	Descriptive Statistics for Scale Scores by Test Period and Subject	190
9.5	Descriptive Statistics by Demographic Group	191
Chapter 10: Reliability		240
10.1	Introduction	240
10.2	Reliability and Measurement Error	240
10.3	Evidence of Raw-Score Internal Consistency	241
10.4	Conditional Standard Error Estimates for Scale Scores	267
10.5	Reliability of Classifications	269
Chapter 11: Validity		275
11.1	Introduction	275
11.2	Purpose and Intended Uses of Test Scores	275
11.3	MO EOC Assessment Scores	276
11.4	Content-Related Evidence of Validity	276
11.5	Validity Evidence Based on the Internal Structure of the MO EOC Assessments	277
11.6	Discriminant Validity Evidence for the MO EOC Assessments	281

11.7 Additional Validity Evidence for the MO EOC Assessments	282
11.8 Summary	283
References	284
Appendices	286
Appendix A: List of Missouri Education-Related Professional Organizations	286
Appendix B: Nomination Letters	288
Appendix C: Nomination Forms	295
Appendix D: Panelist Qualification Guidelines	299
Appendix E: Panel Demographic Characteristics	301
Appendix F: Participant Agendas	307
Appendix G: Opening Session PowerPoint Presentation	310
Appendix H: Draft ALDs with Panel Edits Marked	322
Appendix I: Qualifying Test	345
Appendix J: Mid-Process Evaluation	348
Appendix K: Example Rating Sheet	350
Appendix L: Participant Evaluation Form	355
Appendix M: Results for English I	363
Appendix N: Results for Algebra II	370
Appendix O: Results for Geometry	377
Appendix P: Results for Government	384
Appendix Q: Results for American History	391
Appendix R: Participant Evaluation Form Data	398

LIST OF ABBREVIATIONS

Below is a list of abbreviations that appear frequently in this technical report.

ALD	Achievement-Level Descriptor
AMO	Additional Materials Order
ARC	Assessment Resource Center
AYP	Adequate Yearly Progress
CCSSO	Council of Chief State School Officers
CLE	Course-Level Expectation
CMS	Content Management System
<i>CSEM</i>	Conditional Standard Error of Measurement
CTT	Classical Test Theory
DESE	Department of Elementary and Secondary Education
DIF	Differential Item Functioning
DOK	Depth of Knowledge
EFT	Embedded Field Test
EOC	End-of-Course
FRL	Free and Reduced Lunch
FT	Field Test
GLE	Grade-Level Expectation
GRF	General Research File
IAP	Individualized Accommodation Program
IDEA	Individuals with Disabilities Education Act
IEP	Individualized Education Program
IPASS	Image-Based Performance Assessment Scoring System
IRT	Item Response Theory
ITS	Internet Testing Systems
LEP	Limited English Proficient
LOSS	Lowest Obtainable Scale Score
MAP	Missouri Assessment Program
MH	Mantel-Haenszel procedure
MOSIS	Missouri Student Information System
MS	Mean Square
NCLB	No Child Left Behind
PCA	Principal Components Analysis
PE	Performance Event
RIF	Regional Instructional Facilitator
RSS	Riverside Scoring Service [®]
<i>SE</i>	Standard Error
<i>SEM</i>	Standard Error of Measurement
SR	Selected Response
TAC	Technical Advisory Committee
TCC	Test Characteristic Curve
TDS	Test Development Specialist
WP	Writing Prompt

EXECUTIVE SUMMARY

This document provides a technical summary of the 2010–2011 administrations of the Missouri End-of-Course (MO EOC) Assessments in English I, Algebra II, Geometry, Government, and American History. The criterion-referenced MO EOC Assessments are designed to assess students' knowledge of Missouri's Course-Level Expectations (CLEs) in these five content areas. The 2009–2010 school year marked the first operational administration of the assessments.

E.1 Background

In 1993, the Missouri legislature passed the Outstanding Schools Act (Senate Bill 380), requiring the Missouri State Board of Education to adopt challenging academic performance standards that define the skills and competencies necessary for students to successfully advance through the public school system, prepare for post-secondary education and the workplace, and participate as citizens in a democratic society. The Missouri State Board of Education formally adopted the academic standards known as the Show-Me Standards in January 1996.

In addition to mandating the development of rigorous academic standards, the Outstanding Schools Act of 1993 required the development and implementation of a comprehensive, primarily performance-based assessment program to measure student proficiency in the knowledge, skills, and competencies identified in the standards. Upon adoption of the standards in 1996, Missouri began developing the Missouri Assessment Program (MAP).

In January 2007, the Missouri State Board of Education approved a plan to replace the MAP for high school students with MO EOC Assessments beginning with English II, Algebra I, and Biology in the 2008–2009 school year. The remaining EOC Assessments (English I, Algebra II, Geometry, Government, and American History) were added the following year.

E.2 Administration

The MO EOC Assessments are administered in summer, fall, and spring windows each year. Because the No Child Left Behind Act (NCLB) goal for every school in the state is Proficient as defined by the Missouri State Board of Education, EOC testing is conducted as close as possible to the end of each course to allow school staff and students the greatest opportunity to achieve the goal of proficiency.

The scope of this technical report includes the Summer 2010, Fall 2010 and Spring 2011 assessments..

District- and state-level reports for the MO EOC Assessments are produced and distributed following each Spring administration. The score reports for the 2010–2011 assessment year contained information from the Summer 2010, Fall 2010 and Spring 2011 assessments. In future years, reports will continue to include information from the previous year's Summer, Fall, and Spring administrations.

E.3 Student Performance

A MO EOC Assessment score describes the relationship of student performance to a defined level of achievement. Achievement-level descriptors (ALDs) associated with each level provide details about the content expectations that students at that level meet or exceed. Missouri uses four achievement levels for the EOC Assessments: Below Basic, Basic, Proficient, and Advanced.

Table E.1 displays the percentage of students at each achievement level for the Summer 2010, Fall 2010 and Spring 2011 MO EOC Assessments.

Table E.1: Percentage of Students at Each Achievement Level

Test Period	Achievement Level	English I	Algebra II	Geometry	Government	Am. History
Summer 2010	Below Basic	18.9	34.5	41.9	20.1	56.5
	Basic	41.3	54.9	41.5	34.5	17.4
	Proficient	32.7	8.8	14.8	27.9	21.7
	Advanced	7.1	1.8	1.7	17.5	4.3
Fall 2010	Below Basic	12.2	9.0	16.3	9.0	26.1
	Basic	26.6	30.3	25.9	37.2	25.3
	Proficient	35.5	44.2	36.6	42.1	35.4
	Advanced	25.7	16.4	21.3	11.6	13.2
Spring 2011	Below Basic	10.8	8.5	16.3	7.5	24.3
	Basic	30.9	38.2	33.7	31.6	25.4
	Proficient	38.4	41.7	39.4	44.2	37.9
	Advanced	19.8	11.6	10.6	16.7	12.4

E.4 Evidence Supporting the Validity of Inferences from the MO EOC Assessment Scores

The MO EOC Assessments are part of an integrated program of testing, accountability, and curricular and instructional support. This technical report provides extensive detail about the development and operation of EOC Assessments. While a section of this report is devoted specifically to the documentation of validity evidence for the MO EOC Assessment scores, all information contained in the report ultimately contributes to the argument for the validity of the scores for their intended purposes.

A summary of the information contained in this report follows.

Chapter 1: Introduction

Chapter 1 provides background information about the MAP in general as well as some context for the MO EOC Assessments. Additionally, the chapter provides information about the organizational support provided by each contractor and subcontractor for the MO EOC Assessment program. The chapter ends with a statement of purpose for this technical report

Chapter 2: Test Development

Chapter 2 contains thorough descriptions of each step in the development process for the MO EOC Assessments, including test design, test specifications and target point distributions, test blueprints, item writing, content and bias review procedures, test form assembly, and statistical item review. The evidence provided in this chapter is important to the content-related validity of the MO EOC Assessment scores. Additionally, the chapter covers principles of universal design and outlines the quality control processes employed throughout the test development process.

Chapter 3: Achievement-Level Setting

Chapter 3 details each step in the planning and execution of the November 2009 standard-setting event that resulted in the cut scores for each of the MO EOC achievement levels. Chapter 3 covers selection of participants, development of ALDs, an overview of the methodology and considerations for the data that were available at the time of the standard-setting event, detailed information about each step in the process, and standard-setting results. Additionally, the chapter contains many appendices with examples of the materials that participants used during the standard-setting event.

Chapter 4: Item Analysis

Chapter 4 contains summary information, including item difficulty and discrimination indices, at the item level for each content area. The chapter also contains information on omit rates for the Summer 2010, Fall 2010 and Spring 2011 operational items, as well as differential item functioning (DIF) analyses performed on the Spring 2009 field-test and Spring 2010 embedded field-test data.

Chapter 5: Test Administration

Chapter 5 contains information about the paper-and-pencil and online administration of the MO EOC Assessments, beginning with a description of students for whom the assessments are appropriate. Following this, the details of the administration are summarized. This summary includes a description of how the materials are distributed and how Test Examiners are trained, as well as information about the organization of the assessments, preparation of students to take the assessments, and directions for administration. Next, the chapter includes information about the accommodations allowed on the MO EOC Assessments. Finally, the chapter briefly describes how materials are submitted for processing and scoring.

Chapter 6: Scanning, Scoring, and Quality Control Procedures

Chapter 6 covers the processes involved with scanning, scoring, and controlling the quality of the resulting score information for the selected response items on the MO EOC Assessments. The chapter contains detailed information on how the Riverside Scoring Service[®] (RSS) prepared the MO EOC selected response items for processing, including a check of scanning procedures prior to receipt of materials. Also, it details how the materials were handled from the time they were received and processed at the RSS on through to report generation.

Chapter 7: Scaling and Equating

Chapter 7 begins with an introduction to the item response theory (IRT) model used for the scaling and equating of the MO EOC Assessments. The actual scaling and equating procedures are described in detail, including the calibration of the 2009 standalone field-test items, steps undertaken to establish a base scale for the MO EOC Assessments, examination of the stability of the linking items, steps taken to recenter the 2009 item bank, and steps taken to bring Spring 2010 and 2011 field-test items onto the base scale. This chapter also includes information about the Summer 2010, Fall 2010 and Spring 2011 operational forms, a description of the IRT model assumptions, and evidence of data-to-model fit.

Chapter 8: Reporting

Chapter 8 contains information about the reports Riverside Publishing produced for the MO EOC Assessments, including the Individual Student Report and Student Score Label. A brief summary of state-produced reports is also included.

Chapter 9: Summary Statistics

Chapter 9 provides descriptive statistics for raw scores and scale scores for the MO EOC Assessments. Raw score statistics are summarized by test administration, content area, and cluster. Scale score statistics are summarized for each content area and are also broken down by gender, ethnicity, migrant status, free and reduced lunch (FRL), limited English proficient, Title I, Individualized Education Program, and accommodations.

Chapter 10: Reliability

Chapter 10 begins by defining reliability and providing an overview of reliability estimation techniques. Raw-score internal consistency reliability coefficients are presented for all students and for each demographic group. Conditional standard errors of measurement (*CSEMs*) are also presented at each scale-score cut point.

Chapter 11: Validity

Chapter 11 provides evidence supporting the validity of the MO EOC Assessments for their intended purposes. After a brief introduction to the validity evidence for the MO EOC Assessments, the chapter documents more specific evidence related to test content, the internal structure of the assessments, and other types of validity evidence proposed by the *Standards for Educational and Psychological Testing* (AERA, APA, and NCME 1999). The chapter summarizes and reiterates validity evidence presented in earlier chapters in addition to providing new information not presented elsewhere. It provides a

thorough argument supporting the validity of the MO EOC Assessments for measuring Missouri students' mastery of the CLEs, for identifying students' strengths and weaknesses, for serving as a basis for evaluating accountability plans, and for program evaluation.

CHAPTER 1: INTRODUCTION

1.1 History of Missouri's End-of-Course Assessments

In 1993, the Missouri legislature passed the Outstanding Schools Act (Senate Bill 380), requiring the Missouri State Board of Education to adopt challenging academic performance standards defining the skills and competencies necessary for students to successfully advance through the public school system, prepare for post-secondary education and the workplace, and participate as citizens in a democratic society. The Missouri State Board of Education formally adopted the academic standards known as the Show-Me Standards in January 1996.

These 73 standards are organized around four broad goals that address application, communication, problem solving, and responsible decision-making. Thirty-three process standards emphasize the importance of engaging students of all ages in hands-on, active learning and integrating practical, challenging learning across all content areas. An additional 40 content standards define the academic skills and knowledge that provide the foundation for student learning in six content areas: Communication Arts, Mathematics, Science, Social Studies, Fine Arts, and Health/Physical Education. Content standards serve as the vehicle through which students demonstrate proficiency in the broader process standards. The Show-Me Standards are available for review on the Missouri Department of Elementary and Secondary Education's (DESE) website at <http://dese.mo.gov/standards/index.html>.

In 2001, DESE developed Grade-Level Expectations (GLEs) to assist districts in articulating the Show-Me Standards across grade levels and content areas. GLEs have been developed for Mathematics, Communication Arts, Science, Social Studies, Physical Education, Health, Music, Visual Arts, and Theater. GLEs are available for review on the DESE website at <http://dese.mo.gov/divimprove/curriculum/GLE/index.html>.

In addition to mandating the development of rigorous academic standards, the Outstanding Schools Act of 1993 also required the development and implementation of a comprehensive assessment program to measure student proficiency in the knowledge, skills, and competencies identified within the standards. Upon adoption of the standards in 1996, Missouri began developing the Missouri Assessment Program (MAP) in collaboration with contractor, CTB/McGraw-Hill.

The Missouri State Board of Education adopted the purposes listed below to serve as guiding principles for development of the MAP:

- Improving students' acquisition of important knowledge, skills, and competencies
- Monitoring the performance of Missouri's educational system
- Empowering students and their families to improve their educational prospects
- Supporting the teaching and learning process

The first MAP assessments administered to students statewide were grade-span Mathematics assessments in grades 4, 8, and 10 in spring 1998. A voluntary grade-span Communication Arts Assessment for students in grades 3, 7, and 11 was also administered in spring 1998 and became mandatory in spring 1999. Required Science and Social Studies grade-span assessments (grades 3, 7, and 10, and grades 4, 8, and 11, respectively) were added to the program in subsequent years. A voluntary Health/Physical Education assessment was available in 2000 and required until spring 2002, and a Fine Arts assessment was field tested in 2001. Due to budget constraints, Fine Arts assessment development was suspended and Health/Physical Education Assessment was discontinued. Science and Social Studies grade span assessments returned to voluntary status in spring 2003. Social Studies assessments were discontinued in spring 2008 and required assessments in Science were implemented in grades 5, 8, and 11 to comply with NCLB requirements.

Through the spring 2005 administration, the MAP statewide assessment program included grade-span tests in the following grade levels/subject areas:

- Mathematics at grades 4, 8, and 10
- Communication Arts at grades 3, 7, and 11
- Science at grades 3, 7, and 10 (required spring 1998 through spring 2002; returned to voluntary status in spring 2003)
- Social Studies at grades 4, 8, and 11 (required spring 1999 through spring 2002; returned to voluntary status in spring 2003))

All MAP assessments included three types of items: selected response (SR), constructed response (CR), and Performance Events (PE). For all content areas, MAP assessments included selected response items from the TerraNova Survey Edition. CR and PE items were custom-developed with significant input from Missouri educators.

During the initial MAP development/implementation period, DESE developed two to four equivalent forms for each content area/grade level assessment, using the first form for a voluntary testing cycle and administering the next form(s) in subsequent years. Early in the development phase, DESE tried out new items using separate field tests that usually occurred in the fall of the school year. As the program continued, each test form contained embedded field test (EFT) items. Small-scale pilots continued, as well.

As each content area/grade level assessment was administered, DESE used the Bookmark approach to set achievement levels, defining student performance through spring 2005 as Advanced, Proficient, Nearing Proficiency, Progressing, or Step 1.

After nearly a decade of MAP administration, new federal and state legislation prompted change in the program. To comply with requirements of the No Child Left Behind Act (NCLB) legislation, Missouri's assessment program needed to incorporate Mathematics and Communication Arts assessments in all elementary and middle school grade levels (grades 3 through 8) and at one high school grade level. As a result, new grade-level assessments were developed for both content areas. These assessments were administered for the first time in spring 2006.

Additional NCLB requirements necessitated the addition of a mandatory science assessment once in the elementary grade range, once in the middle school grade range, and once in the high school grade range, beginning in spring 2008. The voluntary Science assessment in grades 3, 7, and 10 became a requirement and was moved to grades 5, 8, and 11. The voluntary Social Studies MAP assessment was eliminated following the spring 2007 administration. Missouri's assessment system changed further in 2008–2009 when high school content area MAP assessments were replaced by End-of-Course (EOC) Assessments.

1.2 Brief Description of Missouri's Current Assessment System

The current MAP system includes the following assessment components for elementary and middle school:

- Grades 3–8 Communication Arts
- Grades 3–8 Mathematics
- Grades 5 and 8 Science

The EOC Assessments administered in 2010-2011 included:

Phase I Assessments for:

- English II
- Algebra I
- Biology

Phase II Assessments for:

- English I
- Algebra II
- Geometry
- Government
- American History

In addition, the statewide assessment program currently includes the Missouri Assessment Program–Alternate (MAP-A) for students with severe cognitive disabilities, WIDA ACCESS for ELLs, and a Personal Finance assessment for high school students who do not enroll in a personal finance course or who are receiving personal finance credit for embedded coursework.

1.3 Summary of the MO EOC Assessments

In response to feedback from Missouri districts regarding large-scale assessments for high school, the Missouri End-of-Course (MO EOC) Assessments were developed and first administered in 2008 for English II, Algebra I, and Biology. The Phase II MO EOC Assessments listed above were developed and first administered in 2009. The MO EOC Assessments were created to address the needs of Missouri districts, schools, teachers, and students, while also meeting state and federal requirements. The Missouri State Board of Education identified the following purposes for the Missouri EOC Assessments:

- Measuring and reflecting students' mastery toward post-secondary readiness
- Identifying students' strengths and weaknesses
- Communicating expectations for all students
- Serving as the basis for state and national accountability plans
- Evaluating programs

Course-Level Expectations (CLEs) outline the ideas, concepts, and skills that form the foundation for each EOC subject area that is assessed. The CLEs are independent of student grade level. Because a course such as Algebra I could be delivered at any grade level, CLEs replace the GLEs. This replacement is necessary because each EOC Assessment is more specific and tailored to each EOC subject area. Districts can offer courses with different titles that cover the same CLEs.

Each Phase II MO EOC Assessment includes only SR items. An SR item presents students with a question followed by four response options. PE or CR items are not included on the Phase II Assessments. All Phase II MO EOC Assessments were offered only in online administration modes for the 2010-2011 school year.

1.4 Testing, Reporting, and Accountability

Evidence of students' progress in meeting the Show-Me Standards/CLEs is obtained from the MO EOC Assessments. These assessments provide the data that DESE uses to inform students, parents, the public, and the state legislature about students' performance; to help make informed decisions about educational issues; and to drive student services throughout the state.

The MO EOC Assessment reports provide useful information for determining the performance of students in a particular school and classroom. These reports help identify students who are below Proficient in a particular test area so that the school may determine a course of action that will meet the students' specific needs. Additionally, districts may use locally designed assessments, aligned to the Show-Me Standards/CLEs, to provide more detailed information for each student in specific test areas.

Testing for the MO EOC Assessments is conducted during three state-designated windows each year. Test windows are available for Summer, Fall, and Spring. Per contract requirements, however, paper reports for all administrations are provided only after the Spring testing window each year. (Teachers may use an online interface to access student raw scores for the SR items.)

Data for this technical report were collected during Summer 2010, Fall 2010 and Spring 2011 operational administrations. Data analyses for the total assessed population, which includes students who have not yet reached the secondary level, are based on a combination of assessment results as well as demographic criteria.

1.5 MO EOC Assessments Organizational Support

DESE coordinates the development and implementation of the MO EOC Assessments. In addition to planning, scheduling, and directing all EOC activities, the staff is extensively involved in numerous test reviews, security, and quality assurance procedures. Riverside Publishing is the primary contractor working in partnership with Questar, Internet Testing

Systems (ITS), Bookette, and others. The main activities for each of these groups are outlined in Table 1.1.

Table 1.1: Main Activities for Groups Involved in MO EOC Organizational Support

Group	Responsibilities
Riverside Publishing	<ul style="list-style-type: none"> • Provides program management, including primary contact with DESE; coordinates all meetings; handles all administrative costs/activities; generates all program management reports and status reports • Works with DESE to develop items with Missouri educators • Creates <i>Test Coordinator's Manual</i>, <i>Test Examiner's Manual</i>, and other ancillary materials • Facilitates all review meetings with Missouri teachers and DESE • Conducts all psychometric analyses, reporting, linking/equating studies, and associated tasks, including participating in achievement-level setting • Provides all needed prepress work for program materials through camera-ready art • Produces all materials, including online, paper-and-pencil, Braille, and Large Print versions of test • Accounts for secure test books received after testing • Provides a direct customer service line, including technical support and general support to the program and customer interactions • Stores materials after testing • Participates in and presents at TAC meetings • Scores all selected response items • Produces and distributes all score reports and the <i>Guide for Interpreting Results</i> • Completes the technical report for DESE • Completes additional research studies
Questar	<ul style="list-style-type: none"> • Provides online enrollment and pre-ID system for use by Missouri districts • Packages and distributes all materials • Barcodes test books with security IDs • Leads facilitation and planning of achievement-level setting and provides members for the achievement-level-setting team • Contributes to the technical report • Participates in meetings with DESE, contributes to status reports, etc.

Table 1.1: Main Activities for Groups Involved in MO EOC Organizational Support (continued)

Group	Responsibilities
Internet Testing Services (ITS)	<ul style="list-style-type: none"> • Sets up a Missouri DESE-branded website for access to the online testing system • Provides the online test delivery of one complete form for each administration for the following content areas: English II, Algebra I, and Biology beginning in 2008, and Integrated Math II, Integrated Math III, Geometry, Algebra II, English I, American History, and Government beginning in 2009 • Provides system documentation for test administrators and the DESE website • Provides technical support from 8 A.M. to 6 P.M., Monday through Friday, for the Riverside Publishing help desk • Produces and hosts practice tests for the English II, Algebra I, and Biology content areas • Provides online tools for graphing and table creation/editing and provides an equation editor • Offers ruler and reference sheets in tests • Provides three administrations per contract year in fall, spring, and summer for all content areas • Supplies a data feed of results from ITS to Riverside Publishing
Districts	<ul style="list-style-type: none"> • Distribute materials to the school buildings, track all secure materials, and promptly return all materials, including answer documents, for scoring • Assist in the timely resolution of scoring alerts • Act as liaison between Riverside Publishing and buildings
School Buildings	<ul style="list-style-type: none"> • Administer tests, track all secure materials, and promptly return materials to districts for scoring
RR Donnelly	<ul style="list-style-type: none"> • Prints all nonscannable testing materials
Techniforms	<ul style="list-style-type: none"> • Prints all scannable test books and answer documents
Region IV, 3X	<ul style="list-style-type: none"> • Prints Braille and Large Print versions, respectively

1.6 Purpose of the Technical Report

The purpose of this technical report is to provide information about the technical characteristics of the 2009 field-test administration, the 2009–2010 operational administration, and the 2010-2011 operational administration of the Missouri EOC Assessments. Because this report is technical in nature and the intended audience is psychometric and educational research experts, it is best understood with a working knowledge of measurement concepts such as reliability and validity and statistical concepts such as correlation and central tendency. For some chapters, the reader is presumed to have basic familiarity with advanced topics in measurement and statistics such as item response theory (IRT).

This technical report provides extensive detail about the development and operation of the Missouri EOC Assessments. The empirical reliability of the assessments and validity of intended uses of the scores are reported explicitly in this document. While Chapter 10: Reliability is relatively straightforward, the steps in creating and operating the program

are all aspects of validity, which is discussed in Chapter 11. The validity of score use and interpretation for any assessment stems from the statement of the test's purpose and the intended use of the scores; the steps taken in designing the test; and the processes of developing the content of the test, consulting with stakeholders, communicating about the test to users, scoring and reporting, and data analysis. The careful documentation of each of these steps is a necessary piece of a comprehensive, defensible validity argument for the intended uses of the assessment scores. In short, while there is a specific chapter devoted to validity, other parts of this document provide evidence necessary to assess the validity of the Missouri EOC Assessment scores for their intended purposes.

In reading this technical report, it is critical to remember that the testing program does not exist in a vacuum; it is not just a test. It is one part of a complex network intended to help schools focus their energies on improving student learning. The MO EOC Assessments are an integrated program of testing and accountability as well as curricular and instructional support. They can be evaluated properly only within their full context.

CHAPTER 2: TEST DEVELOPMENT

2.1 Introduction

The English I, Algebra II, Geometry, Government, American History, and Integrated Mathematics II and III End-of-Course (EOC) Assessments were first administered operationally during the 2009–2010 school year. This chapter provides an overview of the development of the Missouri End-of-Course (MO EOC) Assessments, including the test specifications, item development, item review, and test forms development. According to the *Standards for Educational and Psychological Testing* (AERA, APA, and NCME 1999) (hereafter referred to as the Standards), “Important validity evidence can be obtained from an analysis of the relationship between a test’s content and the construct it is intended to measure” (p. 11). Accordingly, the thorough descriptions of the test development procedures included in this chapter provide evidence to support the construct validity of the MO EOC Assessments.

2.2 Design of the MO EOC Assessments

Figure 2.1 details the design of the Spring 2009 standalone field test, Fall 2009 operational administration, and Spring 2010 operational administration with embedded field test (EFT) for English I. Figure 2.2 details the design of the Spring 2009 standalone field test, Fall 2009 operational administration, and Spring 2010 operational administration with EFTs for Algebra II, Geometry, Government, and American History. Figure 2.3 details the design of the Spring 2009, Fall 2009, and Spring 2010 Integrated Mathematics II and III assessments. It should be noted that the Missouri Department of Elementary and Secondary Education (DESE) made the determination to discontinue these two assessments because of extremely low actual enrollments for the Fall 2009 assessments and low projections of the number of students who would enroll to take these assessments in Spring 2010.

Figure 2.1: Field Test and Operational Assessment Design, English I

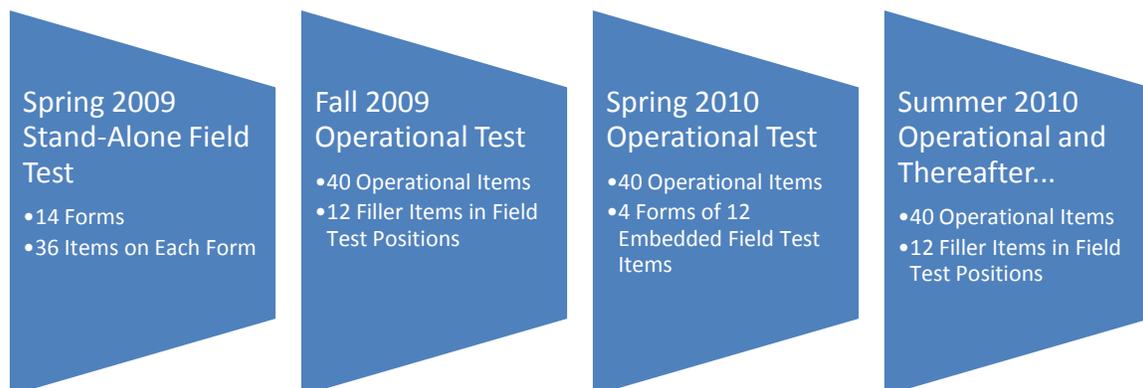

Figure 2.2: Field Test and Operational Assessment Design, Algebra II, Geometry, Government, and American History

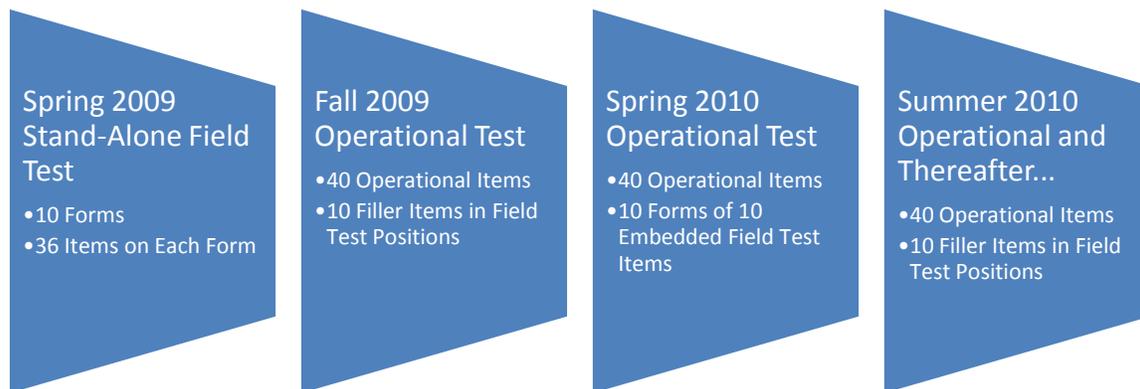

Figure 2.3: Field Test and Operational Assessment Design, Integrated Mathematics II and III

2.2.1 Spring 2009 Standalone Field Test

The Spring 2009 standalone field test provided item data to inform the 2009–2010 operational forms selection process. There were 10 unique forms of 36 items each for Algebra II, Geometry, Government, and American History. English I field tested 14 unique forms with 36 items on each form, and Integrated Mathematics II and III each piloted 4 forms with 36 items on each one. Forms for each course were spiraled at the student level across the state.

2.2.2 Fall 2009 Operational Administration

The Fall 2009 administration consisted of seven operational assessments. English I consisted of one 52-item selected response (SR) form. Algebra II, Geometry, Government, American History, and Integrated Mathematics II and III consisted of one 50-item SR form each. In addition to the 40 scored items, each Algebra II, Geometry, Government, American History, and Integrated Mathematics II and III test book in the Fall 2009 administration contained a set of 10 EFT items. The English I test book contained 12 EFT items in addition to the 40 scored items.

2.2.3 Spring 2010 Operational Administration

The Spring 2010 assessments consisted of seven operational assessments. For all seven assessments, the forms consisted of 40 operational SR items. For English I, there were 4 unique sets of 12 EFT items. For Algebra II, Geometry, Government, and American History there were 10 unique sets of 10 field-test items. There was one form each of Integrated Mathematics II and III with online administration only. As previously noted, because these assessments were discontinued by DESE, districts never accessed the online Integrated Mathematics II and III assessments in spring 2010.

2.2.4 Summer 2010 Operational Administration

The Summer 2010 assessments consisted of five operational assessments with filler items in the EFT slots. There was one form for each course except Integrated Mathematics II and III.

2.2.5 Fall 2010 Operational Administration

The Fall 2010 administration consisted of five operational assessments. English I consisted of one 52-item selected response (SR) form. Algebra II, Geometry, Government, and American History consisted of one 50-item SR form each. Each Algebra II, Geometry, Government, and American History assessment consisted of 40 operational items and 10 filler item in the EFT slots. The English I test book contained 12 filler items in the EFT slots in addition to 40 scored items.

2.2.6 Spring 2011 Operational Administration

The Spring 2011 assessments consisted of five operational assessments. Each Algebra II, Geometry, Government, and American History assessment consisted of 40 operational items and 10 filler item in the EFT slots. The English I test book contained 12 filler items in the EFT slots in addition to 40 scored items.

2.2.7 Released Forms

In addition to the operational forms, DESE and Riverside Publishing also worked together to construct “released” forms for each operational assessment. These forms were posted on the DESE website in August 2009. They were constructed to mirror the test content of the actual operational forms (minus the EFT items) to allow Missouri teachers, parents, and students the opportunity to review the new format and representative content of the EOC Assessments. Although these forms were constructed to parallel the operational forms, the items in these released forms were never used on an operational EOC Assessment.

2.3 Test Blueprints

The test blueprint specifies the relative percentages of items in each high-level content strand. This document helps ensure that each strand is represented by the minimum number of points (8) for student score reports.

Riverside Publishing content experts worked with DESE to develop blueprints for each course before item writing began in fall 2008. Blueprint development was guided by the Missouri Show-Me Standards.

Tables 2.1 through 2.5 outline the test construction blueprints for English I, Algebra II, Geometry, Integrated Mathematics II, Integrated Mathematics III, American History, and Government.

Table 2.1: Test Construction Blueprint for English I

Big Idea	Target # of Points	Point Range *	Target % Total Points	Minimum Emphasis	Maximum Emphasis
1. Develop and apply skills and strategies to the reading process	15	13–17	38%	33%	43%
2. Develop and apply skills and strategies to comprehend, analyze, and evaluate fiction, poetry, and drama from a variety of cultures and times	12	10–14	30%	25%	35%
3. Develop and apply skills and strategies to comprehend, analyze, and evaluate nonfiction (such as biographies, newspapers, technical manuals) from a variety of cultures and times	13	11–15	32%	28%	38%
Total	40	40	100%		

Note: Total score points for each content strand may vary depending on which passages are selected for a particular administration. The percentage of total score points from each content strand (emphasis) will fall within the blueprint range described above.

*The minimum number of points in each strand will be 8.

This blueprint was built under the following assumptions:

1. The reading passages will generally be balanced between nonfiction and fiction. A slight imbalance may occur if an odd number of passages appears on the operational test.
2. Content strand 1 has a larger percentage of total points because it can be assessed using both fiction and nonfiction passages.

Table 2.2: Test Construction Blueprint for Algebra II

Content Strand	Target # of Points	Point Range	Target % Total	Minimum Emphasis	Maximum Emphasis
Number and Operations	8	7–9	20%	17.5%	22.5%
Algebraic Relationships	22	20–24	55%	50%	60%
Data and Probability	10	9–11	25%	22.5%	27.5%
Total	40	40	100%		

Table 2.3: Test Construction Blueprint for Geometry

Content Strand	Target # of Points	Point Range	Target % Total	Minimum Emphasis	Maximum Emphasis
Algebraic Relationships	8	7–10	20%	18%	25%
Geometric and Spatial	24	22–24	60%	55%	60%

2.4 Test Specifications

Standard 1.6¹ specifically addresses the appropriateness of test content and its relationship to a solid validity argument. Additionally, Standard 3.3² defines “test specifications” and provides examples of the type of information that should be included in a specification document. The test specifications describe the content and format of the test and delineate the ideal number of items and points assessed for each Course-Level Expectation (CLE). This section details the development and use of the test specification documents for the MO EOC Assessments.

In 2008, Riverside Publishing content experts developed draft test specifications for each course. These draft test specifications were subsequently reviewed and approved by MO DESE. The specifications were finalized in fall 2008, before the development of items for field-test forms.

The test specification document serves as the foundation for all test item development. The material in the test specifications is designed for use by Riverside Publishing content experts and MO DESE to construct tests containing the following items:

- Aligned to the Missouri CLEs
- Aligned to Norman Webb’s depth of knowledge (DOK) cognitive levels
- SR
- Standalone and passage-based

Detailed descriptions of the test content measured in English I, Algebra II, Geometry, Integrated Mathematics II and III, American History, and Government are presented in the following sections.

2.4.1 English I

The English I MO EOC Assessment measures students’ achievement in reading. All administrations of the test contain commissioned passages that comprise both fiction and nonfiction and cover a wide range of genres, including poems, short stories, newspaper articles, historical fiction, functional texts, and webpages. The questions associated with each passage are in SR format. There are 40 SR items on the English I Assessment.

Table 2.6 contains targets for the CLE point distribution on the English I operational forms. Some of the CLE point targets may not be met because the use of a passage or scenario is not conducive to items written to the CLE. Some Big Ideas are not represented in this chart because they are not assessed at this course level.

¹ **Standard 1.6:** When the validation rests in part of the appropriateness of test content, the procedures followed in specifying and generating test content should be described and justified in reference to the construct the test is intended to measure or the domain it is intended to represent. If the definition of the content sampled incorporates criteria such as importance, frequency, or criticality, these criteria should also be clearly explained and justified (p. 18).

² **Standard 3.3:** The test specifications should be documented, along with their rationale and the process by which they were developed. The test specifications should define the content of the test, the proposed number of items, the item formats, the desired psychometric properties of the items, and the item and section arrangement. They should also specify the amount of time for testing, directions to the test takers, procedures to be used for test administration and scoring, and other relevant information (p. 43).

Tables 2.7 through 2.12 contain actual point distributions for the administered operational forms.

Table 2.6: Target Point Distributions for the English I Operational Forms

Big Idea	Concept	CLE	DOK	Range/CLE
1. Develop and apply skills and strategies to the reading process	E. Vocabulary	Develop vocabulary through text, using a. roots and affixes b. context clues c. glossary, dictionary, and thesaurus	2	4–6
	H. Post Reading	Apply post-reading skills to comprehend, interpret, analyze, and evaluate text: a. identify and explain the relationship between the main idea and supporting details d. draw conclusions e. paraphrase f. summarize	3	6–9
	I. Making Connections	Compare, contrast, analyze, and evaluate connections a. text to text (information and relationships in various fiction and nonfiction works)	3	2–3
2. Develop and apply skills and strategies to comprehend, analyze, and evaluate fiction, poetry, and drama from a variety of cultures and times	A. Text Features	Analyze and evaluate the text features in grade-level text	3	2–3
	B. Literary Techniques	Identify and, explain literary techniques, emphasizing a. irony b. imagery c. repeated sound, line, or phrase d. analyze literary techniques previously introduced	3	3–4
	C. Literary Elements	Use details from text(s) to a. demonstrate comprehension skills previously introduced b. analyze character, plot, setting, point of view c. analyze the development of a theme across genres d. evaluate the effect of author's style	3	4–7

Table 2.6: Target Point Distributions for the English I Operational Forms (continued)

Big Idea	Concept	CLE	DOK	Range/CLE
3. Develop and apply skills and strategies to comprehend, analyze, and evaluate nonfiction (such as biographies, newspapers, technical manuals) from a variety of cultures and times	A. Text Features	Explain, analyze and evaluate the author's use of text features to clarify meaning	3	2–3
	B. Literary Techniques	Identify, explain, and analyze literary techniques in nonfiction, emphasizing a. irony b. imagery c. repeated sound, line, or phrase d. figurative language and sound devices previously introduced	3	3–4
	C. Text Structures	Use details from informational and persuasive text(s) to a. identify and explain the organizational patterns b. analyze and evaluate effectiveness of word choice c. analyze and evaluate for accuracy and adequacy of evidence d. analyze and evaluate point of view e. analyze and evaluate author's viewpoint/perspective f. evaluate proposed solutions g. demonstrate comprehension skills previously introduced	3	5–7

2.4.2 Algebra II

The Algebra II EOC Assessment measures students’ ability to solve problems by applying mathematical concepts. The three strands assessed on the Algebra II Assessment are as follows:

- Numbers and Operations
- Algebraic Relationships
- Data and Probability

The 40 SR questions are aligned to the strands listed above. Table 2.13 contains targets for the CLE point distribution on the Algebra II operational forms. Some Big Ideas are not represented in this table because they are not assessed at this course level. Tables 2.14 through 2.19 contain actual point distributions for the administered operational forms.

Table 2.13: Target Point Distributions for the Algebra II Operational Forms

Strand	Big Idea	Concept	CLE	DOK Level	Range/CLE
Numbers and Operations	1. Understand numbers, ways of representing numbers, relationships among numbers, and number systems	A. Read, write, and compare numbers	Compare and order rational and irrational numbers, including finding their approximate locations on a number line	1	3–4
		B. Represent and use real numbers	Use real numbers and various models, drawings, etc. to solve problems	3	4–5
Algebraic Relationships	1. Understand patterns, relations, and functions	B. Create and analyze patterns	Generalize patterns using explicitly or recursively defined functions	2	2–3
		C. Classify objects and representations	Compare and contrast various forms of representations of patterns	3	2–3
		D. Identify and compare functions	Compare properties of linear, exponential, logarithmic, and rational functions	2	2–3
		E. Describe the effects of parameter changes	Describe the effects of parameter changes on functions	2	2–3
	2. Represent and analyze mathematical situations and structures using algebraic symbols	A. Represent mathematical situations	Use symbolic algebra to represent and solve problems that involve exponential, quadratic and logarithmic relationships	3	2–3
		B. Describe and use mathematical manipulation	Describe and use algebraic manipulations, inverse, or composition of functions	2	1–2
		C. Use equivalent forms	Use and solve equivalent forms of equations and inequalities	2	2–3
		D. Use systems	Use and solve systems of linear and quadratic equations or inequalities with two variables	3	2–3
	3. Use mathematical models to represent and understand quantitative relationships	A. Use mathematical models	Identify quantitative relationships and determine the type(s) of functions that might model the situation to solve the problem	2	2–3
	4. Analyze change in various contexts	A. Analyze change	Analyze exponential and logarithmic functions by investigating rates of change, intercepts, and asymptotes	3	3–4

Table 2.13: Target Point Distributions for the Algebra II Operational Forms (continued)

Strand	Big Idea	Concept	CLE	DOK Level	Range/CLE
Data and Probability	1. Formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them	C. Represent and interpret data	Select and use appropriate graphical representation of data and, given one-variable quantitative data, describe its shape and calculate summary statistics	3	2–3
	2. Select and use appropriate statistical methods to analyze data	A. Describe and analyze data	Apply statistical measures of center to solve problems	3	2–3
		C. Represent data algebraically	Given a scatterplot, determine the type of function which models the data	2	1–2
	4. Understand and apply basic concepts of probability	A. Apply basic concepts of probability	Describe the concepts of sample space and probability distribution	2	1–2
B. Use and describe compound events		Use and describe the concepts of conditional probability and independent events and how to compute the probability of a compound event	2	2–3

2.4.3 Geometry

The Geometry EOC Assessment measures students’ ability to solve problems by applying mathematical concepts. The three strands assessed on the Geometry Assessment are as follows:

- Algebraic Relationships
- Geometric and Spatial Relationships
- Measurement

The 40 SR questions are aligned to the strands listed above. Table 2.20 contains targets for the CLE point distribution on the Geometry operational forms. Some Big Ideas are not represented in this table because they are not assessed at this course level. Tables 2.21 through 2.26 contain actual point distributions for the operational forms.

Table 2.20: Target Point Distributions for the Geometry Operational Forms

Strand	Big Idea	Concept	CLE	DOK Level	Range/CLE
Algebraic Relationships	1. Understand patterns, relations, and functions	B. Create and analyze patterns	Generalize patterns using <u>explicitly</u> or <u>recursively</u> defined functions	2	1–2
		C. Classify objects and representations	Compare and contrast various forms of <u>representations</u> of patterns	3	1–2
		D. Identify and compare functions	Understand and compare the properties of <u>linear</u> and <u>nonlinear functions</u>	2	1–2
	2. Represent and analyze mathematical situations and structures using algebraic symbols	B. Describe and use mathematical manipulation	Apply appropriate properties of exponents to simplify expressions and solve equations	2	1–2
	3. Use mathematical models to represent and understand quantitative relationships	A. Use mathematical models	Identify quantitative relationships and determine the type(s) of functions that might model the situation to solve the problem	2	2–3
	4. Analyze change in various contexts	A. Analyze change	Analyze linear and quadratic functions by investigating rates of change, intercepts, and zeros	3	2–3

Table 2.20: Target Point Distributions for the Geometry Operational Forms (continued)

Strand	Big Idea	Concept	CLE	DOK Level	Range/CLE
Geometric and Spatial Relationships	1. Analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships	A. Describe and use geometric relationships	Use inductive and deductive reasoning to establish the validity of geometric conjectures, prove theorems, and critique arguments made by others	3	6–7
		A. Use coordinate systems	Make conjectures and solve problems involving two-dimensional objects represented with Cartesian coordinates	3	6–7
	3. Apply transformations and use symmetry to analyze mathematical situations	A. Use transformations on objects	Use and apply constructions and the coordinate plane to represent translations, reflections, rotations, and dilations of objects	2	3–4
		C. Use symmetry	Identify types of symmetries of two- and three-dimensional figures	2	3–4
	4. Use visualization, spatial reasoning, and geometric modeling to solve problems	A. Recognize and draw three-dimensional representations	Draw and use vertex-edge graphs or networks to find optimal solutions and draw representations of three-dimensional geometric objects from different perspectives	3	4–5
		B. Draw and use visual models	Draw or use <u>visual models</u> to represent and solve problems	3	
Measurement	2. Apply appropriate techniques, tools, and formulas to determine measurements	B. Use angle measurement	Solve problems of angle measure, including those involving triangles or other polygons and of parallel lines cut by a transversal	2	4–5
		C. Apply geometric measurements	Determine the surface area and volume of geometric figures, including cones, spheres, and cylinders	2	3–4
		E. Use relationships within a measurement system	Use <u>unit analysis</u> to solve problems	2

2.4.4 Integrated Mathematics II

The Integrated Mathematics II EOC Assessment measures students’ ability to solve problems by applying mathematical concepts. The four strands assessed on the Mathematics II Assessment are as follows:

- Numbers and Operations
- Algebraic Relationships
- Geometric and Spatial Relationships
- Data and Probability

The 40 SR questions are aligned to the strands listed above. Table 2.27 contains targets for the CLE point distribution on the Integrated Mathematics II operational forms. Some Big Ideas are not represented in this table because they are not assessed at this course level. Tables 2.28 through 2.30 contain actual point distributions for the operational forms.

Table 2.27: Target Point Distributions for the Integrated Mathematics II Operational Forms

Strand	Big Idea	Concept	CLE	DOK Level	Range/ CLE
Numbers and Operations	1. Understand numbers, ways of representing numbers, relationships among numbers, and number systems	A. Read, write, and compare numbers	Compare and order rational and irrational numbers, including finding their approximate locations on a number line	1	2–3
		B. Represent and use real numbers	Use real numbers and various models, drawings, etc. to solve problems	3	3–4
	2. Understand meanings of operations and how they relate to one another	C. Apply properties of operations	Apply properties of exponents to simplify expressions or solve equations	2	2–3
Algebraic Relationships	1. Understand patterns, relations, and functions	B. Create and analyze patterns	Generalize patterns using explicitly or recursively defined functions	2	1–2
		C. Classify objects and representations	Compare and contrast various forms of representations of patterns	3	1–2
		D. Identify and compare functions	Understand and compare the properties of linear, exponential, and quadratic functions (include domain and range)	2	2–3
		E. Describe the effects of parameter changes	Describe the effects of parameter changes on quadratic and exponential functions	2	1–2
	2. Represent and analyze mathematical situations and structures using algebraic symbols	A. Represent mathematical situations	Use symbolic algebra to represent and solve problems that involve quadratic relationships, including recursive relationships	3	2–3
		B. Describe and use mathematical manipulation	Describe and use algebraic manipulations, including factoring and rules of integer exponents	2	2–3
		C. Use equivalent forms	Use and solve equivalent forms of equations and inequalities (piece-wise and quadratic)	2	1–2
		D. Use systems	Use and solve systems of linear equations or inequalities with two variables	2	1–2
	3. Use mathematical models to represent and understand quantitative relationships	A. Use mathematical models	Identify quantitative relationships and determine the type(s) of functions that might model the situation to solve the problem	2	1–2
	4. Analyze change in various contexts	A. Analyze change	Analyze quadratic functions by investigating rates of change, intercepts, and zeros	3	2–3

2.4.5 Integrated Mathematics III

The Integrated Mathematics III EOC Assessment measures students' ability to solve problems by applying mathematical concepts. The four strands assessed on the Mathematics III Assessment are as follows:

- Numbers and Operations
- Algebraic Relationships
- Geometric and Spatial Relationships
- Data and Probability

The 40 SR questions are aligned to the strands listed above. Table 2.31 contains targets for the CLE point distribution on the Integrated Mathematics III operational forms. Some Big Ideas are not represented in this table because they are not assessed at this course level. Tables 2.32 through 2.34 contain actual point distributions for the operational forms.

Table 2.31: Target Point Distributions for the Integrated Mathematics III Operational Forms

Strand	Big Idea	Concept	CLE	DOK Level	Range/CLE
Numbers and Operations	1. Understand numbers, ways of representing numbers, relationships among numbers, and number systems	A. Read, write, and compare numbers	Compare and order rational and irrational numbers, including finding their approximate locations on a number line	1	2–3
		B. Represent and use real numbers	Use real numbers and various models, drawing, etc. to solve problems	3	3–4
	2. Understand meanings of operations and how they relate to one another	C. Apply properties of operations	Apply properties of logarithms to simplify expressions or solve equations	2	2–3
Algebraic Relationships	1. Understand patterns, relations, and functions	B. Create and analyze patterns	Generalize patterns using explicitly or recursively defined functions	2	1–2
		C. Classify objects and representations	Compare and contrast various forms of representations of patterns	3	1–2
		D. Identify and compare functions	Understand and compare the properties of linear, quadratic, exponential, logarithmic, rational, and periodic functions (include asymptotes)	2	2–3
		E. Describe the effects of parameter changes	Describe the effects of parameter changes on logarithmic and exponential functions	2	1–2
	2. Represent and analyze mathematical situations and structures using algebraic symbols	A. Represent mathematical situations	Use symbolic algebra to represent and solve problems that involve exponential and logarithmic relationships, including recursive and parametric relationships	3	2–3
		B. Describe and use mathematical manipulation	Describe and use algebraic manipulations, including inverse of functions, composition of functions, and rules of exponents	2	2–3
		C. Use equivalent forms	Use and solve equivalent forms of equations and inequalities (exponential, logarithmic and rational)	2	1–2
		D. Use systems	Use and solve systems of linear and quadratic equations or inequalities with two variables	3	1–2
	3. Use mathematical models to represent and understand quantitative relationships	A. Use mathematical models	Identify quantitative relationships and determine the type(s) of functions that might model the situation to solve the problem (including recursive forms)	2	1–2
	4. Analyze change in various contexts	A. Analyze change	Analyze exponential and logarithmic functions by investigating rates of change, intercepts, and asymptotes	3	2–3

Table 2.31: Target Point Distributions for the Integrated Mathematics III Operational Forms (continued)

Strand	Big Idea	Concept	CLE	DOK Level	Range/CLE
Geometric and Spatial Relationships	1. Analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships	A. Describe and use geometric relationships	Use inductive and deductive reasoning to determine lengths and angle measures in all types of triangles and to establish the validity of geometric conjectures, proved theorems, and critique arguments made by others	3	4–5
	3. Apply transformations and use symmetry to analyze mathematical situations	B. Use transformations on functions	Perform simple transformations and their compositions on linear, quadratic, logarithmic, and exponential functions	2	2–3
	4. Use visualization, spatial reasoning, and geometric modeling to solve problems	A. Recognize and draw three-dimensional representations	Draw representations of three-dimensional geometric objects from different perspectives using a variety of tools	3	1–2
Data and Probability	1. Formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them	A. Formulate questions	Describe the characteristics of well-designed studies, including the role of randomization in survey and experimental research	3	1–2
		C. Represent and interpret data	Display and analyze bivariate data where one variable is categorical and the other is numerical	3	1–2
	2. Select and use appropriate statistical methods to analyze data	B. Compare data representations	Recognize how linear transformations of single-variable data affect shape, center, and spread	3	1–2
		C. Represent data algebraically	Create a scatterplot, describe its shape, and determine and analyze regression equations	3	1–2
	3. Develop and evaluate inferences and predictions that are based on data	A. Develop and evaluate inferences	Describe how sample statistics reflect the values of population parameters and use sampling distributions as the basis for informal inference	3	1–2
	4. Understand and apply basic concepts of probability	B. Use and describe compound events	Use and describe how to compute the probability of a compound event	2	2–3

2.4.6 American History

The American History assessment measures students' abilities to understand our history and participate in our civic life as citizens and consumers. The American History forms consist of 40 SR items that are aligned to Strand 3. Individual CLEs within that strand report out to the following categories:

- History
- Government
- Economics
- Geography

Table 2.35 contains targets for the CLE point distribution on the American History operational forms. Some Big Ideas are not represented in this table because they are not assessed at this course level. Tables 2.36 through 2.41 contain actual point distributions for the operational forms.

Table 2.35: Target Point Distributions for the American History Operational Forms

Strand	Big Idea	Concept	CLE	DOK Level	Range/CLE
Missouri, United States, and World History	3a. Knowledge of continuity and change in the history of Missouri and the United States	A. Understand the migrations of people from many regions to North America	Describe the migrations of people from many regions of the world and the interactions of cultures and religious traditions that have contributed to America's history from Reconstruction to the present: <ol style="list-style-type: none"> a. motivations for immigration b. challenges to immigrants 	3	3–4
		I. Political development in the United States	Analyze the evolution of American democracy, its ideas, institutions, and political processes from Reconstruction to the present, including: <ol style="list-style-type: none"> a. Reconstruction b. struggle for civil rights c. expanding role of government d. expanding participation in political processes 	3	3–4

Table 2.35: Target Point Distributions for the American History Operational Forms (continued)

Strand	Big Idea	Concept	CLE	DOK Level	Range/CLE
		J. Understanding economic concepts	Apply the following major economic concepts in the context of the historical period studied: a. natural resources, labor, and capital resources b. supply and demand (shortages and surpluses) c. business cycle d. government regulation and deregulation e. unemployment and full employment f. inflation and deflation g. savings and investment h. profit	3	2
		K. Principles and purposes of government	Explain the importance of the following principles of government since Reconstruction a. majority rule and minority rights b. constitution and civil rights c. checks and balances	2	4
		M. Processes of governmental systems	Analyze the roles and influence of political parties and interest groups since Reconstruction to the present	3	4
		N. Economic development in the United States	Describe the historical development of the American economy, including a. impact of geographic factors b. role of the frontier and agriculture c. impact of technological change and urbanization on land, resources, society, politics, and culture d. changing relationships between government and the economy	2	3–4

Table 2.35: Target Point Distributions for the American History Operational Forms (continued)

Strand	Big Idea	Concept	CLE	DOK Level	Range/CLE
		O. Understanding the roles of people, business, and government in the economic system of the United States	Analyze the roles people, business, labor unions, and government play in the U.S. economy: a. how monopolies affect people's lives and how they are regulated b. how boycotts, strikes, and embargoes affect trade and people's options c. monetary policy (why the Federal Reserve System influences interest rates and money supply) d. fiscal policy (government taxation and spending)	3	2
		P. Understanding functions and effects of economic institutions	Survey the functions and effects of major economic institutions of the U.S. economy, such as corporations, labor unions, and financial institutions	2	2
		R. Understanding the roles of the government in the U.S. economy	Identify the roles of government in the U.S. economy (defining and protecting property rights, maintaining competition, promoting goals such as full employment, stable prices, growth, and justice)	2	2
		U. Understanding relationships within places	Distinguish major patterns and issues with regard to population distribution, demographics, settlements, migrations, and cultures in the United States.	2	4
		V. Understanding relationships between and among regions	List and explain criteria that give regions their identities in different periods of U.S. history. Explain how and why regions change.	2	4

Table 2.35: Target Point Distributions for the American History Operational Forms (continued)

Strand	Big Idea	Concept	CLE	DOK Level	Range/CLE
		W. Foreign and domestic policy developments	Describe and evaluate the evolution of U.S. domestic and foreign policies from Reconstruction to the present, including a. isolationism b. immigration policy c. Manifest Destiny d. imperialism e. two world wars f. Cold War g. New Deal h. global interdependence	3	3–4
		X. Causes, comparisons, and results of major twentieth-century wars	Examine the wars of the twentieth century pertinent to U.S. history, including causes, comparisons, consequences, and peace efforts	2	3–4

2.4.7 Government

The Government assessment measures students' abilities to understand our history and participate in our civic life as citizens and consumers. The Government forms consist of 40 SR items that are aligned to Strands 1 and 2 as follows:

- Principles of Constitutional Democracy
- Principles and Processes of Governance Systems

Table 2.42 contains targets for the CLE point distribution on the Government operational forms. Some Big Ideas are not represented in this table because they are not assessed at this course level. Tables 2.43 through 2.48 contain actual point distributions for the operational forms.

Table 2.42: Target Point Distributions for the Government Operational Forms

Strand	Big Idea	Concept	CLE	DOK Level	Range/CLE
Principles of Constitutional Democracy	1. Knowledge of the principles expressed in documents shaping constitutional democracy in the United States	A. Principles of constitutional democracy in the United States	Apply the following principles of constitutional democracy to historical and contemporary issues: a. checks and balances b. separation of powers c. federalism d. representation e. popular sovereignty f. due process of law g. judicial review	3	2–4
			Determine the civic responsibilities of individual citizens	2	2–4
			Assess the changing roles of government: a. philosophy b. limits c. duties	2	2–4
			Describe the historical foundations of the U.S. governmental system as reflected in the following documents: a. Magna Carta b. Enlightenment writings of Hobbes, Locke, Rousseau, Montesquieu, and the Social Contract Theory c. Mayflower Compact d. Declaration of Independence e. Articles of Confederation	3	2–4
			Identify and give examples of democracies and republics	2	2–4
		B. Role of citizens and government in carrying out constitutional principles	3	2–4	
		Explain the relevance and connection of constitutional principles in the following documents: a. U.S. Constitution b. Federalist Papers c. Amendments to the Constitution, emphasizing the Bill of Rights d. Key Supreme Court decisions, <i>Marbury v. Madison</i> , <i>McCulloch v. Maryland</i> , <i>Miranda v. Arizona</i> , <i>Plessy v. Ferguson</i> , <i>Brown v. Topeka Board of Education</i>

2.5 Development of Test Items

Content-related evidence of validity supporting test interpretation is presented in terms of how the 2010–2011 MO EOC Assessments were assembled for English I, Algebra II, Geometry, Government, American History, and Integrated Mathematics II and III. Detailed information regarding both item-development procedures and content coverage is included in this section.

The forms for the Summer 2010, Fall 2010, and Spring 2011 administrations were constructed using items that were field tested in Spring 2009 and Spring 2010. During the process of building the forms for the 2010–2011 operational test administrations, statistical characteristics (i.e., *p*-values and point-biserial correlations) were monitored to ensure that the statistical properties of the forms were similar within each content area and across operational test forms for fall, spring, and summer.

Riverside Publishing Test Development Specialists (TDSs) created a detailed item and passage development plan based on the blueprints for each content area. The plan included the number of items necessary for each assessable CLE, as well as an outline of the review process for developed items and passages. This process included internal Riverside Publishing reviews, a DESE review on a percentage of the items, and content and bias review by Missouri educators.

2.5.1 Item Writing

The individuals who created all the test items were Missouri educators, DESE staff members, Regional Instructional Facilitators (RIF), and Riverside Publishing TDSs. English I passages were developed by item writers trained by Riverside Publishing, Riverside Publishing TDSs, and DESE staff. These passages were developed and refined prior to the item-writing workshops. Requirements to be an item writer included experience in classroom teaching and expert content knowledge.

In January 2008, Riverside Publishing conducted item-writing workshops to develop SR items for Algebra II, Geometry, Government, and American History. These workshops were conducted at the Assessment Resource Center (ARC) office space in Columbia, Missouri. Participants in the workshops included Missouri educators, DESE staff and Regional Instructional Facilitators, and Riverside Publishing TDSs. The workshops were held during a five-day period and were conducted with 15–20 teacher participants per

content area. Teacher participants were selected by DESE to represent school districts throughout Missouri.

In March 2008, Riverside Publishing conducted item-writing workshops to develop SR items for English I and Integrated Mathematics II and III. English I participants wrote SR items associated with the passages that had been developed prior to the item-writing workshops. The content developed at the both workshops was based on the Missouri Show-Me Standards and CLEs.

During the item-writing workshops, Riverside Publishing TDSs conducted training sessions with the item writers and provided instructions on avoiding bias and stereotyping of groups and individuals based on gender, race, ethnicity, religion, age, language, socioeconomic group, and disability. Riverside Publishing TDSs also trained item writers to write items that adhere to the principles of universal design, making the items accessible to the widest range of students. For example, items and passages were written using clear and concise language, and all graphics and tables were labeled and were not overly crowded with extraneous information. Instruction was also provided on developing items at particular cognitive levels based on Norman Webb's DOK levels.

Riverside Publishing TDSs trained item writers to enter content into the company's electronic Content Management System (CMS). During training, item writers wrote several items and received feedback on them. Participants also received feedback through CMS, and Riverside Publishing TDSs responded to teachers' items as they were submitted. As items were produced, they were continuously reviewed, revised, edited, and evaluated by Riverside Publishing TDSs and DESE staff. Item writers who generated high-quality work on or ahead of schedule were given additional assignments.

As items were written, they were tracked according to the item development plan. Riverside Publishing kept careful records to maintain a workflow that generated items in assessment strands and CLEs as required by the test blueprint. All items and passages went through several rounds of internal reviews, including content and editorial reviews. Riverside Publishing TDSs reviewed each item with respect to alignment, clarity, grade appropriateness, and correspondence to item specifications.

2.5.2 Universal Design

Riverside Publishing TDSs are experienced in employing the principles of universal design in item development so that all students have equal access to the assessments. Riverside Publishing included these principles when training Missouri teachers to write the test items.

According to the *NCEO Synthesis Report 44* (Thompson, Johnstone, and Thurlow 2002), there are seven elements of universally designed assessments:

1. Inclusive assessment population
2. Precisely defined constructs
3. Accessible, nonbiased items
4. Amenable to accommodations
5. Simple, clear, and intuitive instructions and procedures

6. Maximum readability and comprehensibility

7. Maximum legibility

All items for the MO EOC Assessments were developed with these elements in mind. Riverside Publishing ensured the development of MO EOC items in accordance with these principles in the following manner:

- Items were developed to include a wide array of contexts and cultures. These item types may make students feel more included, increase motivation, and avoid bias.
- The test and item specifications served as a model for precisely defining the constructs that the tests would measure. These specifications indicated to the item writer, content reviewer, and TDS exactly what was to be measured. The item could assess a particular part of a standard or a combination of elements within a standard. The reviews served as a method for eliminating items that included assessment of knowledge outside the standard. For example, a mathematics item should have nonmathematical vocabulary below grade level; otherwise, the item might also be assessing reading ability, introducing construct-irrelevant variance.
- The review of items, which was performed by reviewers who included Missouri teachers from diverse ethnic and geographic backgrounds, served to ensure that all items were accessible to as many students as possible.
- Riverside Publishing staff members trained Missouri teachers to create clear and simple instructions so that students would have a clear understanding of the task needed to answer an item. Teacher review committees had an opportunity to review the instructions to ensure that they were appropriate for the grade levels and subject areas. To ensure the appropriateness of the level of the vocabulary, *Children's Writer's Word Book* and *EDL Core Vocabulary* were employed by test developers and item review committees.
- Finally, items with text, graphics, tables, maps, and diagrams were constructed with maximum legibility.

2.5.3 Content and Bias Review Process

Standard 3.6³ specifically addresses the importance of item review by both an examination of the item statistics and the use of expert panels of judges. This section details the steps that were taken to ensure that the items chosen for the operational forms of the MO EOC Assessments were of high technical quality and were free from bias. Content and bias reviews were conducted in July 2008 in Columbia, Missouri. The review committees included DESE staff, Missouri educators from around the state, Regional Instructional Facilitators, and Riverside Publishing staff.

The content review committees reviewed SR items using the following criteria:

³ **Standard 3.6:** The type of items, response formats, scoring procedures, and test administration procedures should be selected based on the purposes of the test, the domain to be measured, and the intended test takers. To the extent possible, test content should be chosen to ensure that intended inferences from test scores are equally valid for members of different groups of test takers. The test review process should include empirical analyses and, when appropriate, the use of expert judges to review items and response formats. The qualifications, relevant experiences, and demographic characteristics of expert judges should also be documented (p. 44).

- Overall quality and syntactical clarity
- Content coverage and content appropriateness
- Alignment to the specified CLE
- Appropriate contexts
- One clearly correct answer and plausible distractors for SR items
- Freedom from bias or any racial, socioeconomic, gender, or other sensitivity issues

The bias review committee was held separately from the content review committee and those participants focused on reviewing items on the last criterion above. Suggestions from the bias review committee were then shared with the content review committee for their review and a determination on how to incorporate the edits.

Before reviewing the items, a group training session was held with all committee members. Riverside Publishing presented a PowerPoint that described the MO EOC program, the test development process, and the content and bias review procedures. After the large-group session, the committee members went to their respective break-out rooms to discuss the week's activities in more detail. The committee members were provided with copies of the CLEs and item specifications for the courses for the items they were to review. Each Riverside Publishing content facilitator reviewed these documents with the committee and answered any questions. The committee members were given the following checklists that could be referenced throughout the review process:

For SR items:

- Does the item assess the assigned CLE?
- Is the item clear, concise, and complete?
- Does the item contain accurate and sufficient content information?
- Is the item grade-level appropriate, and are the vocabulary and syntax appropriate for the students at the intended grade? (Reference the *EDL Core Vocabularies*.)
- Is the item fair to all students and free of bias and sensitivity issues?
- Does the item have correct punctuation, and is it grammatically correct?
- Is the item free from spelling and typographical errors?
- Is clueing avoided within an item stem and options, as well as among items?
- Does the item stand alone? (The answer to one item should not be dependent on the content of another item.)
- Are the equations, tables, charts, graphs, and other art clear, accurate, and necessary?
- Does the item have only one correct answer?
- Does the item have unique, plausible distractors containing common errors students would make?
- Are all the options parallel in form and arranged in logical order?
- Do all distractors contain clear rationale statements? (Math and Science only)

- Is the item free from absolutes (“none of the above,” “all of the above”) as options and free from the use of negatives (“not,” “none,” “except”) in the stem?
- Does the item avoid repeating words from the stem in the options?
- Does the item pose a single problem (although the solution may require more than one step)?

Missouri educators participated in the review process for each content area. The committee members read and reviewed each item. Discussions were held about whether or not the items met the criteria listed above. The committees then rejected or revised any items they deemed unsatisfactory. If there was disagreement about how to proceed with an item, the Riverside Publishing facilitator polled the group and followed the direction of the majority. Approximately 98% of the items were accepted (as-is or with edits) by the content and bias committees. Table 2.41 shows the number of items that were reviewed in 2008. The accepted items were placed in a pool of items from which the 2009 standalone field-test forms were built.

To further preserve validity, all item review sessions were held in secure meeting rooms, and all materials were confidential. Committee members were required to sign confidentiality agreements so that the integrity of the test content was not compromised. Although educators were encouraged to share information with their colleagues about the process of the item review, they were made fully aware of the expectation that any information about specific items and passages was to remain secure and confidential.

Table 2.49: 2008 Content/Bias Item Review Acceptance Rates

	Total Number of Items Presented for Review	Number of Items Accepted (As Is or With Edits)	Acceptance Rate (Items Accepted As Is or With Edits)
Algebra II	490	488	99.5%
Geometry	488	471	97%
English I	669	669	100%
American History	494	470	95%
Government	492	474	96%
Integrated Math II	380	380	100%
Integrated Math III	380	378	99.4%

2.6 Test Form Assembly

2.6.1 Field-Test Selection and Administration

The items accepted at the content/bias review were used to build the standalone field-test forms that were administered in spring 2009. Field-test items were selected so that each form met the established operational blueprint requirements for content coverage as closely as possible. For any standalone field-test form that deviated slightly from the blueprint, another field-test form made up for that difference, so that the entire pool of field-tested items met the blueprint requirements.

The MO EOC Spring 2009 field test consisted of 10 SR forms of 36 items each for Algebra II, Geometry, Government, and American History. English I field tested 14

unique forms with 36 items on each form, and Integrated Mathematics II and III each field tested 4 forms with 36 items on each form. All field-test forms were reviewed and approved by DESE. The forms for each course were spiraled at the student level across the State.

2.6.2 Statistical Item Review

After completion of the 2009 field-test item scoring, Riverside Publishing TDSs and psychometricians reviewed the statistical characteristics of the items. Riverside Publishing used classical item statistics, including n -counts, p -values, percentage choosing each response option, point-biserial correlations, and differential item functioning (DIF) analysis for the SR items. Additionally, the Rasch model was used for distractor analysis for the SR items.

During the data review on June 19, 2009, the Riverside Publishing Research and Test Development staff and DESE staff reviewed students' performance on the Spring 2009 field-test items. Items were carefully reviewed with respect to their statistical characteristics. Item reviewers from DESE and Riverside Publishing were provided with the following information:

- Form
- Position
- Item as it appeared in the printed books
- Item alignment to the Missouri Show-Me Standards
- The p -value of the correct answer and percentage of students who selected each distractor
- Point-biserial correlation of correct response and point-biserial for each distractor
- Total number of students who attempted to answer each question
- DIF using the Mantel-Haenszel (MH) (1959) procedure and Educational Testing Service (ETS) classification

Riverside Publishing and DESE staff reviewed items that were flagged because of statistics that fell outside the parameters determined by the Riverside Publishing Research staff. Table 2.42 contains the guidelines used for data review.

Table 2.50: Criteria for Flagged Items

Item Flagging Criteria	Indicates
If p -value of keyed response < 0.35	Difficult item
If p -value of keyed response > 0.95	Easy item
If p -value of keyed response $< p$ -value of distractor	Possible miskey
If p -value of distractor > 0.35	Possible second correct option
If point-biserial of keyed response < 0.20	Poorly discriminating item
If point-biserial of a distractor is > 0.00	Possible second correct option
If ETS classification is B or C (from DIF analysis)	Possible bias in item

Each flagged item was reviewed, and then Riverside Publishing and DESE made a decision about whether the item should be accepted or rejected. The review included

items flagged with moderate to severe DIF (an ETS classification of B or C). A flagged item was accepted if the review team determined that the item was strong and tested students on content they were expected to know. Accepted items were then made available in the pool of items that could be used to create the operational forms. Items that the review team felt were biased or inappropriate for the Missouri EOC Assessments were rejected. Rejected items were removed from the item pool, making them invalid for the MO EOC Assessments. Of the 2,233 total items reviewed, 93% were accepted.

2.6.3 Operational Test Selection and Administration

In June and July 2009, Riverside Publishing TDSs selected operational items for test forms for use in 2009 and 2010. Using item response theory (IRT) item difficulty information, four equivalent operational forms were selected for each content area. These four forms are the operational component of the Fall, Spring, and Summer EFT forms, as well as the released form. The Fall form was administered in November 2009, the Spring form in April 2010, and the Summer form in June 2010.⁴

The operational form construction process was based on content requirements and statistical criteria. The steps associated with assembling test forms included the following:

1. *Determine form design.* Each form consisted of operational items and EFT items.
2. *Select items that meet content specifications.* Each form was constructed based on the test specifications for that content area. The test specifications delineated the item distribution across assessment strands. They also outlined the test length, type of items, and number of points to be assessed at each CLE.
3. *Evaluate statistical specifications, and select items to meet these specifications.* Spreadsheets (form matrices) were used to ensure that the test forms met statistical specifications. These matrices contained the following statistics: average p -values, point-biserial correlations, and DIF statistics. Riverside Publishing psychometricians conducted a review of the test forms to ensure equivalence of test difficulty across forms.
4. *Review and approve test forms.* Once the content and statistical specifications were met for each content area, the forms were reviewed and approved by DESE. The forms were then released for production and additional content and editorial reviews.

2.7 Braille and Large Print Versions

Beyond employing the principles of universal design, all operational assessments were offered in Braille and Large Print versions for visually impaired students taking the MO EOC Assessments. The Fall 2009 operational paper-and-pencil version was converted into Braille and large print to accommodate these students.

⁴ The Summer 2010 administration is part of the 2010–2011 assessment year, and its results are not included in this technical report.

Once the Braille and Large Print Forms were created, two separate reviews were held on September 17 and 18, 2009, with educators from Missouri who had specialized training in working with visually impaired students.

The teachers consulted the *Large Print and Braille Style Guide*, which was also used during form composition, and relied on their own expertise to determine whether changes to directions, passages, or items were needed or whether items should be omitted. The Riverside Publishing Braille vendor (Region IV) also reviewed the forms and made recommendations based on how items, passages, and directions would be transcribed to Braille.

Riverside Publishing and DESE reviewed the recommendations from all of these sources. It was determined that no items had to be omitted to accommodate students who needed Large Print materials. For the Braille version of the form, three items from Geometry and one item from English I were removed because the content of the items prohibited transcription to Braille. Students taking the Braille form were given credit for these items. The embedded field test items were eliminated from both versions of these forms due to the irregular testing conditions and the small sample sizes for these groups. These versions of the Large Print and Braille forms were used through the Summer 2010 test administration.

2.8 Online Forms Construction

All items were written so they could be presented in the online delivery system without any alterations.

2.9 Quality Control for Test Construction

Checklists and quality control procedures accompany each stage of form development. Following is a list of some quality control procedures used during the assembly of the MO EOC Assessment forms:

- Construct forms based on all content requirements noted in the test blueprint and test specifications
- Verify correct number of items per standard or reporting category based on test blueprint
- Review items to ensure a wide sampling of the knowledge and skills being measured
- Ensure that all items have been through the appropriate review procedures and are approved for use by DESE
- Check for a variety of item topics, equal distribution of males and females, ethnicities, etc.
- Verify appropriate portions of items with and without artwork
- Check for clueing across all items on each form
- Verify equal or nearly equal distribution of answer choices for SR items
- Ensure that the test meets the required statistical specifications (i.e., that as many items as possible have p -values between 0.35 and 0.90 and as many items as possible have point-biserial correlations above 0.20)
- Consider any statistical flags or problems

- Check statistics to ensure that the collection of items on a given form yields an overall difficulty that falls within the specified range
- Verify that items have not been released to the public
- Verify correct answer key for each item
- Perform content review of form (senior staff)
- Perform statistical review of form (psychometrician/statistician)
- Send form to DESE for review and approval

2.10 Summary

The MO EOC Assessments in English I, Algebra II, Geometry, Government, American History, and Integrated Mathematics II and III provide an indication of student progress toward achieving the knowledge and skills identified in the Missouri Show-Me Standards. Just as the Show-Me Standards guided item development and selection process, the consideration of content played an equally important role in form development. Form development required a balance of both content coverage and item difficulty. As items were selected for inclusion on particular forms, every effort was made to balance the content coverage to ensure the items aligned to the Missouri Show-Me Standards/CLEs being assessed while simultaneously considering the overall difficulty of the form. DESE made the determination to discontinue the Integrated Mathematics II and III assessments due to extremely low actual enrollments for the Fall 2009 assessments and low projections of enrollment for Spring 2010.

CHAPTER 3: ACHIEVEMENT-LEVEL SETTING

3.1 Introduction

One purpose of assessment is to establish clear guidelines for educational decision making. By assigning meaning to test scores, standard setting allows policymakers, administrators, teachers, and parents to make statements about the level of proficiency of individual students and groups of students. The purpose of this chapter is to provide documentation of the achievement-level-setting (or standard-setting) event conducted for the Missouri End-of-Course (MO EOC) Assessments on November 2–5, 2009.

3.2 Goal of the Standard Setting

The main goal of the standard-setting event was to establish three cut scores for each test in the MO EOC Assessments:

1. The cut score that differentiates Below Basic performance from Basic performance
2. The cut score that differentiates Basic performance from Proficient performance
3. The cut score that differentiates Proficient performance from Advanced performance

In other words, the determination of three cut scores yields four performance categories for each assessment.

3.3 Overview of the Standard Setting

During the November 2009 event, achievement-level-setting activities were undertaken for five MO EOC Assessments: English I, Algebra II, Geometry, American History, and Government. These five assessments were administered operationally for the first time during the 2009–2010 school year.

It should be noted that the original plan for achievement-level setting included sessions for Integrated Math II and Integrated Math III. However, before the event, DESE made the determination to discontinue these two assessments due to extremely low actual enrollments for the Fall 2009 assessments and low projections of the number of students who would enroll to take these assessments in Spring 2010. Additionally, DESE received only five participant nominations for the Integrated Math panels, confirming the low participation in these two courses statewide.

3.4 Staff and Participants

Staff from Questar Assessment, Inc., a subcontractor to Riverside Publishing, planned and facilitated the standard-setting workshops in consultation with Riverside Publishing's MO EOC Assessment team. Questar's most experienced facilitators—Michael Beck, Sheila Potter, and Leon Dreyfus—served as facilitators for the workshops. Each of these individuals has facilitated standard-setting sessions for multiple clients for both elementary-level and high-school-level assessments.

In addition to the staff from Questar, three psychometricians from Riverside Publishing attended the workshops. Their function was to enter panelist data, produce tables and reports, and oversee data quality control as well as observe activities in each of the groups. A Riverside Publishing program manager was present for the entire workshop to assist Missouri Department of Elementary and Secondary Education (DESE) staff and the panelists with logistical issues. Content area specialists from Riverside Publishing's Content Development group were present in the five panel rooms to serve as resources for content-related questions. Finally, curriculum staff from DESE attended the standard-setting workshops to serve as content resources to the appropriate panels.

3.4.1 Participant Recruitment

In July 2009, DESE electronically distributed informational letters and panelist nomination forms to all Missouri district superintendents, Regional Professional Development Center (RPDC) directors, and selected professional educator organizations. In addition, DESE contacted the Director of the Missouri Department of Higher Education's Curriculum Alignment Initiative. The cover letters described the process and impact of the standard-setting event and provided some preliminary details such as date and location. The letters also stressed that this was a unique opportunity for panels of educators and other individuals to discuss Course-Level Expectations (CLEs) for each applicable course and to review assessment items to determine the appropriate "cut scores" for each achievement level. Each addressee was given the opportunity to nominate one or more classroom teachers, nonteacher educators, post-secondary educators, or business professionals with appropriate content knowledge to be considered for participation in the standard-setting event. The panelist nomination letters and forms were also distributed to an applicable group of education-related professional organizations in Missouri. A list of those organizations is included as Appendix A.

The requirements for participation were as follows:

For classroom teachers: The teacher must have taught the course for which he or she is being nominated to serve as a panelist for a minimum of five years. The teacher should be familiar with the Show-Me Standards and the applicable CLE. Finally, the teacher should be recognized as "outstanding" in professional performance.

For nonteacher educators and post-secondary educators: The educator may be a nonteacher educational staff member in a building or district central office or an instructor or administrator at a post-secondary institution. The educator must have familiarity with the course content for which he or she is being nominated to serve as a panelist. He or she should be familiar with the Show-Me Standards and applicable Course-Level Expectations. Finally, the educator must be recognized as "outstanding" in professional performance by the individual making the nomination.

For business professionals: The business professional must have familiarity with the content of the course for which he or she is being nominated to serve as a panelist. Additionally, the individual either should use high school course content for the applicable content area in his or her daily professional work *or* be familiar with the knowledge and skills that high school students completing the applicable courses must possess to have a firm foundation for further coursework or for the workplace. Finally,

the business professional must not be a current or former employee of the public school system.

Appendix B contains copies of the nomination letters sent to district administrators, RPDC directors, and professional educator organizations. Appendix C contains copies of the nomination forms for classroom teachers, nonteacher educators, and business professionals. Appendix D contains a copy of the panelist qualification guidelines that were mailed with the nomination packets.

3.4.2 Panel Characteristics

A total of 100 panelist nomination forms were received by DESE by September 1, 2009: 30 for English I, 18 for Algebra II, 16 for Geometry, 23 for American History, and 13 for Government. (Some individuals were nominated to serve on more than one panel. An additional five panelists were nominated to serve on Integrated Mathematics II and III panels, for which standard setting did not occur. Three of those individuals, who were all classroom teachers, were assigned to the Algebra II and Geometry panels.) From these nomination forms, DESE's Curriculum and Assessment staff members chose panelists based upon expertise, demographic characteristics, and types of schools and student populations represented.

An effort was made to ensure representation of the state's urban, suburban, and rural schools and communities, as well as to include representation from the state's 11 RPDC regions. Additionally, as much as possible given the nomination pool, an attempt was made to include panelists with expertise in working with students with special needs and English-language learner (ELL) students. By design, panel slots were heavily populated with classroom teachers. Additionally, with the exception of the American History panel, each panel included one representative of the Missouri Department of Higher Education's Curriculum Alignment Initiative. These individuals have been involved in developing draft competencies for entry into college-level coursework. Historically, DESE has had difficulty, even with targeted recruiting, with locating minority panelists to create panels that are demographically similar to Missouri's population. However, an attempt was made to include educators on each panel who work in districts that serve significant numbers of minority children.

In a few instances, more than one panelist from the same school district was nominated for the same content area. In these cases, DESE chose only one of the nominees to serve on the panel to avoid overrepresentation of any one district on the panels.

A total of 73 panelists participated in the standard-setting workshop. Three members of the English I panel and two members of the Geometry panel had participated in an earlier achievement-level-setting workshop for other Missouri assessments. A small portion (approximately 10 percent) of the panelists had worked on some phase of standards development or assessment development at the state level. The remaining panelists were involved in leadership activities in their individual districts as they implemented EOC Assessments and aligned curriculum to CLEs. More than half of each panel was made up of active classroom teachers in the relevant content area; several other panel members were nonteacher professional educators, such as administrators and curriculum coordinators. Table 3.1 contains summary information about the demographic

characteristics of each panel. Appendix E contains detailed information about the demographic characteristics of each panel.

Table 3.1: Summary of Panel Characteristics for Phase II Assessments

Category	Panel				
	English I	Algebra II	Geometry	American History	Government
Gender					
Male	2	3	6	10	6
Female	14	13	10	3	6
Race

Totals	16	16	16	13	12

The MO EOC Assessments use the same achievement-level labels used for the grade-level Missouri Assessment Program (MAP): Advanced, Proficient, Basic, and Below Basic. For each of these levels, the achievement-level descriptor (ALD) describes the specific knowledge and skills that a student at that level must be able to demonstrate. As suggested by the Technical Advisory Committee (TAC), Riverside Publishing drafted ALDs and presented the drafts to DESE. Prior to the standard-setting workshop, DESE conducted sessions devoted to revising these ALDs.

3.5 Overview of Standard-Setting Activities

3.5.1 Methodology and Data Considerations

The specific methodology used for the standard-setting activities was a modified Angoff procedure, as recommended by the state’s TAC. The Angoff procedure and its modifications are well-recognized and heavily researched methods for establishing student performance standards for tests such as the EOC. Missouri achievement-level-setting workshops for the grade-level MAP used an item-mapping procedure commonly known as Bookmark standard setting; however, that method requires placing the items in a difficulty-ordered item book, which necessitates that the item difficulty parameters be known. In the case of the 2009 MO EOC Assessments, because the operational assessment window had not ended at the time of the event, parameter estimates from the operational test forms were not available. Additionally, the method for and timing of this standard-setting event mirrored the Phase I event that took place in fall 2008. In that case, the standard setting was scheduled for fall due to federal submission requirements, and the modified Angoff method was used because operational data were not available at the time of the event. The modified Angoff method does not require placing the items in difficulty order; it was, therefore, a suitable choice of methods for this event.

The modified Angoff method requires three distinct rounds of panelist judgments. Between the first and second rounds, Riverside Publishing provided the panelists with item-difficulty data for their consideration. Because operational data were not available in November, the item data were derived from the Spring 2009 field-test event. Panelists were appropriately cautioned about the limitations of such data.

Before the last round of judgments, Riverside Publishing staff provided the panelists with statewide impact data for the assessment. These data were intended to serve as an anchor for the panelists’ recommendations. Again, because actual performance data were not available, the data were based on projected statewide score distributions generated from the Spring 2009 field-test event. It is likely that a standalone field-test event would produce lower-than-expected results due to decreased student motivation; therefore, Riverside Publishing psychometricians would consider the field-test data “lower-bound” estimates of actual student performance in an operational event. As with the item-level data estimates, the facilitators cautioned the panelists about relying too much on these impact data.

Despite the limitations of the field-test data for the standard-setting activities, we believe that providing panelists with even tentative data was desirable, both to mirror procedures used for establishing standards for previous Missouri assessments and to provide panelists with an “external reality check” on their evolving recommendations. Past

technical advisory committee discussions confirmed the use of these projected statewide impact data.

In addition to the caveats about item level data and impact data, panel facilitators clearly communicated to the panelists that the results of their standard-setting activities would be purely advisory to DESE. DESE would consider the recommendations and present them to the state board of education for approval.

3.5.2 Description of the Test Forms and Considerations

The MO EOC Phase II Assessments are composed of only selected response (multiple choice) items. DESE chose to use the MO EOC Spring 2010 operational forms for the standard-setting event. These forms were selected from the several available operational forms because they would be the most widely used in the 2009–2010 test administration year. Although the final printed test books were not available yet at the time of the event, Riverside Publishing staff presented the panelists with prototypes that contained all the test items in the same order and with the same “look and feel” as the final printed test books.

3.6 Specific Standard-Setting Activities

The Standard-Setting Session Agendas provided general guides regarding the time devoted to each activity. Copies of the agendas are included as Appendix F. Questar facilitators held closely to the times contained in the agenda. They used identical processes, including presentation slides and scripts, across all five sessions to minimize any intersession differences related to facilitator or session variance.

The following sections provide details about the processes that Questar and Riverside Publishing followed during the course of the standard-setting workshop.

3.6.1 General Process Overview

The first 90 minutes of the three-day session served as an introduction and overview to the general standard-setting processes. First, Dr. Andrea Wood, Director of Assessment for DESE, oriented the panelists to the MO EOC program and briefly outlined the session purpose and intended outcomes.

Next, Michael Beck of Questar led a general overview, “What Is Standard Setting?” Its purpose was to ensure a common understanding of the fundamental elements of the process. Mr. Beck included a brief overview of the general process of establishing student performance standards, ground rules for panelist activities, and some key elements for the panelists to focus on when attempting to set standards. Mr. Beck also advised the panelists that their work was advisory to DESE. This introduction was a high-level overview of the standard-setting process; individual facilitators provided more detail about each step in the process after the panels broke into content-specific groups. The PowerPoint slides presented during the opening session are included as Appendix G of this report.

Finally, Dr. Sheila Potter of Questar provided a general overview of ALDs and their importance to the standard-setting process. Since the panels would be reviewing, editing, and expanding on draft versions of the ALDs provided by the state, it was important for

panelists to understand the critical role of ALDs in the standard-setting process. Following this activity, panelists divided into the content-specific panel break-out rooms, where all remaining work for the sessions took place.

3.6.2 Panelists Take the Operational Assessments

After reconvening in the content-area panels, panelists first introduced themselves and signed DESE-provided confidentiality forms. Facilitators introduced themselves and reiterated the high-level standard-setting processes that Mr. Beck had discussed during the opening session. Facilitators then allowed the panelists time to take and score the Spring 2010 form of the operational assessment. For this activity, panelists had access to the test administration procedures, the actual test content, and all relevant scoring materials. Field-test items that were included in these forms were removed from the test books. Because these were “live” materials, facilitators stressed the confidentiality of all of the items.

The primary purpose of this activity was to familiarize panelists with the actual, complete assessment content before beginning the standard-setting judgments. Following this review of the tests, each panel spent a short time reacting to the assessment content: difficulty, sources of challenge, scoring issues, and general and specific reactions. This exercise provided the panelists, especially those not familiar with the MO EOC Assessments, with a context concerning the definition of Proficient as conveyed by the assessments.

3.6.3 Panelists Discuss and Fine-Tune the ALDs

At the standard-setting workshop, participants devoted a significant portion of time to fine-tuning the draft ALDs for each assessment. The facilitators provided the panelists with draft copies of the appropriate ALDs, copies of the MO EOC Assessment blueprint, and the appropriate CLEs. Using these materials as references and drawing on the expertise of the panelists, the Questar facilitators led each panel in an extended discussion and exercise to refine and elaborate each of the ALDs. Once this activity was complete, the panels relied on the resulting ALDs as a reference during the actual standard-setting activities. In addition, the panelists were allowed to make appropriate, though generally minor, revisions and refinements to the ALDs during and after the standard-setting activities.

All content-area panels began this activity with a review of the draft ALDs for the particular content area. Separate panels of Missouri educators had developed these draft ALDs during DESE-led sessions several weeks earlier. The ALD review activity was highly interactive, with panelists suggesting changes and other refinements—both substantive and editorial—to the draft ALDs. The ultimate task was to operationalize specific behaviors indicating performance at the Advanced, Proficient, Basic, and Below Basic levels in the content area. The activity involved brainstorming, with each panelist’s ideas recorded and considered without expecting consensus. Panel suggestions were written on the draft ALDs, a copy of which was given to each panelist or placed on chart paper displayed around the room. Panelists were later able to refer to these pages, along with the original drafts, during the actual judgment activities. The thoroughness of the ALD refinement activities and the extent to which the panelists, individually and as a

group, internalized the ALDs significantly impacted the soundness of the subsequent standard-setting activities. For this reason, approximately one and a half hours were devoted to this activity in the session agenda.

At the conclusion of the standard-setting sessions, DESE collected the panelist recommendations for ALD revisions for consideration in the wording of the final ALDs. Appendix H contains a copy of the draft ALDs that was distributed to the panelists at the outset of the standard-setting workshop. The panels' final edits are indicated within the draft ALDs.

3.6.4 Orientation to the Modified Angoff Procedures

After completion of the ALD review activity, facilitators oriented the panels to the specific tasks involved with the modified Angoff standard-setting process. The modified Angoff process requires panelists to read and make judgments about each successive item in the test book, using the following procedures. When reading an item, panelists were to consider the item's importance in the context of the underlying CLE, the task(s) required of the student, and the item's difficulty. They were to decide what percentage of minimally Proficient students should be able to answer the item correctly. Panelists were then to decide what percentage of minimally Advanced students would answer the item correctly. Finally, they were to decide what percentage of minimally Basic students would answer the item correctly. (While the MO EOC Assessments contain four levels of student performance, cuts are made at only three locations on the score distribution.) The panelists were instructed to consider their judgments in this order—Proficient, Advanced, and Basic—as it anchors the item judgments on the most important cut, Proficient. In addition, once panelists made their judgment for the Proficient students, they had a clearer, more defined range of values to consider for the other two cuts.

The facilitators included the following important points in their presentations:

- Panelists should focus on the *threshold* of performance in each category.
- Panelists should review and recall what each performance descriptor means.
- Panelists should focus on the group of students who would take the MO EOC Assessment students statewide, not just the students in the school or district in which they work.

Finally, the facilitators explained that the panelists' judgments should be made independently and anonymously and that security of the testing materials should be maintained at all times.

The steps outlined in Sections 3.6.1 through 3.6.4 composed the activities of the first day of the workshop. The second day began with an overview of the previous day's activities and outcomes, after which panelists took a five-item selected response qualifying test concerning the standard-setting procedures they were about to use. A copy of this instrument is provided as Appendix I. This qualifying test was used to ensure that all panelists understood the importance of the ALDs and selected elements of the modified Angoff procedure before beginning the process of making item judgments.

Before moving on to the Round 1 judgments, facilitators asked the panelists to complete and sign a form indicating that they understood the information they had received and

discussed and that they felt prepared to make their Round 1 judgments. All panelists so indicated. An example of this form is included as Appendix J.

3.6.5 Round 1 Judgments

At this point, panelists were ready to make their Round 1 judgments. This work was completed anonymously (via judge identification numbers known only to the individual panelist and Riverside Publishing staff) and independently. Panelists indicated their judgments on specially designed scannable rating sheets developed for each content area. These rating sheets contained three fields for each test item: one for Basic, one for Proficient, and one for Advanced. As panelists made their judgments for each item, facilitators instructed them to “bubble in” one value for each achievement level (in other words, for Item 1, the panelist entered a number corresponding to the percentage of students expected to choose a correct answer at the minimally Basic level, a number for the minimally Proficient level, and a number for the minimally Advanced level). Panelists followed this procedure for all the test items. An example rating sheet is included as Appendix K.

Most panelists completed their first round of judgments within 60 minutes; however, there was no time limit for this activity, and some panelists required 90 minutes to complete their judgments. This is not unusual for the first round of judgments in a modified Angoff workshop; often some panelists are still struggling to understand the task at this point, thus requiring more time to make their judgments. After panelists completed their judgments, they turned in their rating sheets and were excused for the evening.

3.6.6 Feedback and Discussion of Round 1 Judgments

During the evening, the Riverside Publishing psychometricians prepared reports of the Round 1 judgment results. The next morning’s session began with an overview of these reports. The first report was a table displaying all three raw score cuts as determined individually by each panelist’s judgments. This table also contained the entire panel’s average, median, highest, and lowest raw score cuts, as well as the standard deviation of all the panelists’ judgments for each of the three raw score cuts. The second report contained a frequency display of all three cut scores (Basic, Proficient, and Advanced) recommended by each panelist. This bar graph displayed all the panelists’ judgments on a single graph so that areas of dispersion or overlap in the raw cut scores would be apparent. These reports were anonymous; ID numbers, rather than names, were used to identify individual panelists.

The facilitators spent time reviewing these reports with the participants to ensure that everyone understood how to interpret the information contained in them. Using the Round 1 results, facilitators then led an extended discussion of the Round 1 judgments. Most of the work focused on the interim judgments of panelists at an individual test item level. Facilitators actively engaged all the panelists in the discussion to gauge whether they had indicated the item percentage values that they intended, that the reasoning processes they followed in making their judgments were consistent with good practice, and that the panelists clearly understood the mechanics of making item judgments. Throughout these discussions, facilitators focused on the key elements of the standard-

setting process: establishing the *threshold* of each cut, projecting the cuts for a *statewide* population of these students, and focusing on the particular *course* and *performance level* of the target populations.

Much like a jury deliberation, this discussion also allowed the panelists to hear their peers' comments and rationales for their judgments. This phase took around one hour, depending on the session; facilitators permitted discussion to continue until they perceived that all panelists were prepared to make their second round of judgments.

Next, facilitators distributed statewide item difficulty data derived from the 2008 field-test event. The derived item difficulties were item *p*-values, or the proportion of students who answered the item correctly in the 2009 field-test event. Recall from Section 3.5.1 that the data used to derive the item difficulty values were collected during a standalone field-test event. During the presentation of the item difficulty data, facilitators advised the panelists that caution should be taken in interpreting the item difficulty data, since student motivation may not have been the same as it would be on an operational assessment. Facilitators also explained that these data were relevant, but not critical, to the process of setting standards.

3.6.7 Round 2 Judgments

During Round 2, panelists again worked independently to make judgments about the percentage of students at the threshold of each achievement level who would answer each item correctly. Facilitators explained to the panelists that they were free to maintain their Round 1 judgments or to revise them as they deemed appropriate. Before beginning this round of judgments, panelists were once more reminded of the key elements of the process and were asked to focus specifically on the ALDs for their assessment. Again, there was no time limit, although this round required significantly less time than did Round 1 because the panelists more clearly understood the judgment process. In addition, they were increasingly familiar with the specific items for which they were making the judgments. Further, many panelists had begun to formulate some or all of their Round 2 item judgments during the discussion of the Round 1 results.

After panelists completed their Round 2 judgments and recorded their recommendations on their rating sheets, they submitted the forms and were excused for lunch. After all rating sheets were collected, Riverside Publishing psychometricians prepared the reports of the Round 2 judgments.

3.6.8 Feedback and Discussion of Round 2 Judgments

When the panels convened after the lunch break, facilitators presented the results of the Round 2 judgments. The reports showing the Round 2 results were used to guide another discussion of specific items. The presentation and discussion at this stage were similar to, although more focused than, those following Round 1.

Following this discussion, facilitators provided panelists with estimated statewide impact data—that is, the percentages of students statewide whose performance likely would be labeled Below Basic, Basic, Proficient, or Advanced if the panels' Round 2 judgments were adopted. The panels' median Round 2 judgments were used to determine cut scores for this report. Again, facilitators advised the panelists that the impact data were relevant to, but not essential for, setting performance standards. (This cautionary information was

especially important in the case of MO EOC Assessments, as the data were not grounded in an operational administration of the assessments.)

When facilitators were comfortable that all panelists were prepared to make their final recommendations, they proceeded to Round 3 of judgments.

3.6.9 Round 3 of Judgments, Meeting Evaluation, and Final Inspection of ALDs

For Round 3, the panelists' judgments consisted of one recommended cut score for each achievement level; panelists were not required to make item-level judgments. Panelists were given unlimited time to complete their Round 3 (final) recommendations, although most completed their judgments within 20 minutes. All panelists clearly understood that only the Round 3 judgments counted as their recommendations and that the three rounds were not combined in any way to form the proposed cuts.

After completing their final round of judgments, panelists completed a written evaluation of the process. This evaluation covered the panelists' opinions of the adequacy of the training provided and their comfort with and confidence in their judgments on a round-by-round basis. The form also contained spaces for the panelists to write other comments concerning the workshop. A copy of this evaluation is included as Appendix L of this report.

After facilitators collected the panelist evaluations, they allowed the panels time for a final review of the ALDs. During this time, panelists were allowed to discuss and, if necessary, fine-tune or revise the ALDs. Finally, panelists were thanked for their participation and dismissed.

3.7 Session Results by Panel and Round

Appendices M, N, O, P, and Q contain the feedback reports by round for English I, Algebra II, Geometry, Government, and American History, respectively. Selected data from these graphs and tables are summarized below for ease of cross-round and cross-content-area comparison.

The standard-setting literature typically considers the *median* recommendation to be the best indicator of a panel's judgment, as the median would not be impacted by the judgments of a few outlying panelists. In the case of this standard-setting event, as a review of Appendices M through Q indicates, all median and mean Round 3 cut scores are within a single rounded raw-score point for all of the content areas. Therefore, the choice of a measure of central tendency for these particular panels would not markedly impact the resulting cut scores.

Table 3.2 contains the median panel cut scores for all rounds and content areas. As the data in Table 3.2 indicate, the panels did not make significant changes to their recommended cut scores across the three rounds of judgments. This is not to say that individual panelists made the same recommendations across rounds. In fact, across the 15 sets of judgments between rounds (five content areas with three cut scores each), the average difference in the number of raw score points between cut scores was 0.67 between Rounds 1 and 2, 0.40 between Rounds 2 and 3, and 0.93 between Rounds 1 and 3. (The median raw-score change between any pair of rounds was 0.)

Table 3.2: Median Recommended Cut Scores by Content Area and Round

Cut*	Content Area														
	English I			Algebra II			Geometry			Government			American History		
	B	P	A	B	P	A	B	P	A	B	P	A	B	P	A
Round 1	18	26	32	14	23	33	17	27	33	15	25	33	18	26	32
Round 2	18	26	33	14	24	33	17	24	32	15	26	34	19	25	32
Round 3/Final	16	25	33	16	24	33	17	24	32	15	25	34	19	25	32
No. Points Possible	40			40			40			40			40		

*B = Basic, P = Proficient, A = Advanced

As is typically the case with standard-setting activities conducted over multiple rounds, the standard deviations of panelists' recommendations got smaller across rounds, indicating both an increasing level of panelist understanding of the process and increasing interpanel agreement based on group discussions between rounds of judgments. This is illustrated graphically through an examination of the frequency bar charts in Appendices M through Q, as well as statistically in the tabled results. The bars representing Basic, Proficient, and Advanced cut scores clearly become taller and more compact over each round of judgments. While panelists came closer to their peers in judging the most appropriate cut scores, even in Round 3—not unexpectedly—there was still a fair amount of spread in the recommended scores.

Standard errors of the median judgments (*SEJs*) were computed for all cut scores across all panels and are presented in Table 3.3. The *SEJ* is a measure of the degree of variability among the participants in each panel. It is calculated in the following manner:

$$SEJ = SE_{Mean} \times 1.25,$$

where SE_{Mean} is the standard error of the mean of the panel's cut scores. SE_{Mean} is calculated by taking the standard deviation of the participant ratings divided by the square root of the number of panelists. Lower values of *SEJ* indicate greater cut score agreement among the participants within a panel. In no case did the Round 3 *SEJ* reach a whole raw-score unit. Most were lower than half of a raw-score point. This indicates that the final median judgments are highly stable.

Table 3.3: Standard Errors of Median Judgments for Each Cut Score Across Rounds and Panels

Panel	Basic			Proficient			Advanced		
	Round 1	Round 2	Round 3	Round 1	Round 2	Round 3	Round 1	Round 2	Round 3
English	2.20	1.34	0.75	0.38	0.23	0.37	0.07	0.03	0.05
Algebra	0.67	0.63	0.35	0.94	0.62	0.34	0.16	0.13	0.11
Geometry	1.46	0.86	0.51	0.40	0.40	0.40	0.11	0.12	0.08
Government	1.85	0.63	0.24	0.88	0.41	0.19	0.10	0.07	0.02
Am. History	0.98	0.61	0.57	0.71	0.87	0.44	0.21	0.19	0.17

Table 3.4 summarizes the projected statewide percentages of students whose EOC scores will fall in each of the four performance categories. These data are based on the Spring 2009 field-test results and were viewed as “lower-bound” estimates of the likely statewide results that were obtained at the end of the 2009–2010 school year.

Table 3.4: Projected Statewide Percentages of Students Scoring in the Various Performance Categories on the EOC Assessments, 2009

Assessment	Below Basic	Basic	Proficient	Advanced
English I	9%	34%	37%	20%
Algebra II	14%	45%	33%	8%
Geometry	18%	30%	38%	14%
Government	12%	44%	34%	10%
Am. History	23%	32%	30%	15%

3.8 Results of Participant Evaluations

Appendix R contains the data collected from panelists for the rating-scale type items on the evaluation forms. For the questions pertaining to the organization and adequacy of information provided in the opening session, the panelists generally provided ratings of 4 or 5 (on a scale of 1 to 5, with 5 being the highest). For the evaluation questions pertaining to the discussions of the achievement-level descriptors and the panelists’ understanding of each of the ALDs after the discussions, in all cases, at least 80% of the panelists provided ratings of 4 or 5. The questions pertaining to the panelists’ understanding of the judgment process and feedback on the results of each round received similar scores. Overall, these data indicate that the panelists generally understood what was expected of them, were comfortable with the process, and were comfortable with the resulting cut scores.

CHAPTER 4: ITEM ANALYSIS

4.1 Introduction

Item analyses were conducted for Missouri End-of-Course (MO EOC) Assessments in English I, Algebra II, Geometry, Government, and American History. In this chapter, the summary information, which includes mean item score and discrimination indices, is presented at the item level for each content area. The item summary statistics presented in this section (p -values, point-biserial correlations, and omit rates) are based on the operational administrations that included responses from 1465 students for Summer 2010, 19957 students for Fall 2010, and 165450 for Spring 2011 across the five content areas. The differential item functioning (DIF) analyses are based on the Spring 2009 standalone field-test and the 2010 embedded field test data.

4.2 Analysis of Forms for Each End-of-Course Assessment

Tables 4.1 through 4.15 summarize item difficulty, discrimination, and omit rates for the items that composed each assessment for the Summer 2010, Fall 2010 and Spring 2011 operational administrations. For each item, the p -value is the proportion of students who answered the item correctly. The item discrimination, or corrected point-biserial correlation, is the correlation between students' item scores and their total scores on the remaining test items. Both item difficulty and item discrimination are expressed in the raw score metric.

Table 4.1: Item Statistics for English I, Summer 2010 Operational Administration

Item	<i>p</i>-Value/ Mean	Corrected Point- Biserial Correlation	Omit Rate %	Item	<i>p</i>-Value/ Mean	Corrected Point- Biserial Correlation	Omit Rate %

4.3 Speededness

The consequence of time limits on examinees' scores is called speededness. A test is speeded if examinees taking it score lower than they would have had the test not been timed. Most speededness statistics are based on the number of items that were not attempted by students. For the purpose of this analysis, if a student did not attempt the last item on any of the separately timed subsections of the test, it was assumed that the student might not have reached the item because he or she ran out of time.

The MO EOC Assessments were not designed to be speeded tests. Rather, they were intended to be "power tests"; that is, all students were expected to have ample time to finish all items and prompts.

The "% Omit" column in Tables 4.1 through 4.15 shows the percentage of students who omitted each selected response item for each MO EOC Assessment. It is clear from the tables that the omit rates are negligible or zero for the majority of items.

4.4 Item Bias Statistics

Differential item functioning (DIF) occurs when an item has difficulty measures that vary across contexts for similarly able subgroups of examinees. DIF was examined with the Mantel-Haenszel (MH) procedure (Mantel and Haenszel 1959) for SR items.

The Mantel-Haenszel procedure is a nonparametric approach to DIF. In the MH procedure, total raw scores are held constant while the odds ratio is estimated. In practice, the odds ratio is generally converted to the delta metric, and the Educational Testing Service (ETS) categorization is applied to flag the significance of DIF effects (Dorans and Holland 1993).

With the groups matched on raw score, the comparable examinees can be placed in 2×2 tables of group by item response, where j equals the number of levels of the matching variable. For these analyses, j equals each observed score category of the k -item tests, with $j = 0, 1, 2, \dots, k$, then one 2×2 table for a given item with score category j can be represented as

	Correct	Incorrect	Total
Reference	y_j	x_j	m_j
Focal	y'_j	x'_j	m'_j
Total	n_j	n'_j	N_j

The Delta MH test statistic and variance have the following form:

$$DeltaMH = 2.35 \ln \frac{\left[\sum_{j=0}^K \frac{(y_j x'_j - y'_j x_j)}{N_j} \right]}{\sum_{j=0}^K \frac{y'_j x_j}{N_j}},$$

where y_j , x_j , y'_j , and x'_j are the frequency counts of cells of the 2×2 tables and N_j is the total n for the cells.

The critical values of the ETS categorizations are 1.00 and 1.50 on the delta scale for categories A, B, and C. Specifically, if the absolute value of delta is smaller than 1.00, the item is categorized as A. If the absolute value of delta is larger than or equal to 1.50, the item is classified as C. Otherwise, items are categorized as B. In both the A and C categories, statistical significance is set at the 5% level for a single item.

Results of the DIF analyses for the items on the operational administrations (based on field-test data) are summarized in Tables 4.16 through 4.20. Table 4.21 contains DIF statistics for the entire pool of MO EOC Assessment items.

Table 4.16: Frequency Distribution of DIF Categories for the Fall 2009 Operational Assessments

Test	Group***	Selected Response Items*

4.5 Summary

The item analyses provided in this chapter show that the MO EOC Assessments have sound psychometrics properties. For example, p -values show that MO EOC Assessment items measure achievement across a broad range of difficulty. Also, item discrimination values show that most items are appropriately correlated with the total test score and thus contribute to distinguishing between lower-performing and higher-performing students. In addition, very few students omitted items during testing. The low percentage of students omitting SR items provides evidence that the test is a power test of the students’ skills and not a speeded test. Finally, item bias statistics based on data from the Spring 2009 standalone field-test administration shows the items to be generally free from statistical bias.

CHAPTER 5: TEST ADMINISTRATION

5.1 Introduction

This chapter contains information about Department of Elementary and Secondary Education (DESE) and Riverside Publishing processes that ensure the standardized administration of the Missouri End-of-Course (MO EOC) Assessments. The Standards (AERA, APA, and NCME 1999) state that, “For tests designed to assess the examinee’s knowledge, skills, or abilities, standardization helps to ensure that all examinees have the same opportunity to demonstrate their competencies” (p. 61). In other words, careful attention to the details of information dissemination, Test Examiner training, accommodations and modifications, and test security help ensure that students taking the EOC Assessments in different locations have equal opportunities for success.

The *EOC Test Coordinator’s Manual* and *Test Examiner’s Manual* contain detailed information about the testing guidelines, materials handling, and standardized administration instructions for the EOC Assessments. While those manuals are not included here, much of the information contained in this chapter can be found in them.

For the MO EOC Assessments, districts can choose either paper-and-pencil or online delivery format. The *Online Test Examiner’s Manual* contains information specific to the registration for and administration of the online version of the MO EOC Assessments. Relevant information related to the online delivery, where it differs from the paper-and-pencil format, is included in this chapter.

5.2 Students for Whom the EOC Assessments Are Appropriate

The responsibility and authority for testing students in the MO EOC Assessments at the appropriate time in the course of instruction belong to the local district. The EOC Assessments are based on Course-Level Expectations (CLEs) rather than on Grade-Level Expectations (GLEs). Therefore, when the content of the CLEs is covered in the local school district’s curriculum, the test may be administered regardless of student grade level or course name.

5.2.1 Students with Individualized Education Programs

A student with disabilities, as classified under the Individuals with Disabilities Education Act (IDEA), has an Individualized Education Program (IEP) that, in part, governs whether a particular assessment is appropriate for the student. In the case of the EOC Assessments, decisions about whether a student with a disability will participate in the assessments are made by the student’s IEP team and are documented in the IEP. All students must take the three Phase I EOC Assessments (English II, Algebra I, and Biology), plus the Government EOC Assessment from Phase II. However, if a student’s disability qualifies him or her to take the MAP-Alternate Assessment (MAP-A), that student will not be required to participate in the EOC Assessment.

5.2.2 Students with Individual Accommodation Programs

Students with Individual Accommodation Programs (IAPs) are considered disabled under Section 504 of the 1973 Rehabilitation Act. These students are not served under IDEA

and are not documented with a particular designation for the EOC Assessment. However, professionals who are knowledgeable about a student's disability and educational needs should make accommodation decisions for the student, as they would for a student with an IEP.

5.2.3 English Language Learner Students

Students who have been in the United States for 12 months or less at the time of test administration may be exempted by the local school district from taking EOC English assessments.

5.3 Students for Whom a School or District is Accountable

For accountability purposes, Missouri must include the results for any student who is eligible to take the EOC Assessments and has been enrolled at least one full academic year in a school (for school accountability) or district (for district accountability) without transferring out of the building or district for a significant period of time and re-enrolling. A full academic year is defined as the last Wednesday in September through the EOC Assessment administration. A significant period of time is considered one more than half of the eligible days between the last Wednesday in September and the test administration. DESE obtains enrollment information from the Missouri Student Information System (MOSIS) data that are reported by school districts. This rule applies to the building and district summary levels independently. For example, a student who is coded in a building less than a year but was in the district a full academic year is excluded from the building totals but is included in the district totals.

5.4 Dissemination of Testing Materials and Information

Riverside Publishing works with Questar Assessment, a subcontractor for the EOC Assessment program, to gather all enrollment counts and distribute all paper-and-pencil testing materials. Riverside Publishing distributes all password information for the online system. Before the start of the test window, districts enter their enrollment counts and scheduled testing window into ServicePoint, an online enrollment and materials ordering system. From those enrollment counts, Questar generates each district's order. All paper-and-pencil materials are shipped one week before the district's designated testing window. Districts that administer the assessments online receive an e-mail message with password information one week prior to test administration. The District Test Coordinator (DTC) is responsible for inventorying all paper-and-pencil materials, as well as for distributing the online test information to the test administrators. If additional materials are needed, the Test Coordinator is responsible for placing an Additional Materials Order (AMO) through ServicePoint.

5.5 District and Test Examiner Training

DESE is responsible for training the Test Coordinators on EOC test administration. DESE provided training on all information covered in the *Test Coordinator's Manual* and the *Test Examiner's Manual* via online webinar. Both DESE and Riverside Publishing are available to answer any questions the districts may have about the EOC Assessment administration.

Riverside Publishing provides training to districts that administer the EOC Assessments online. The hour-long training session is conducted via WebEx and gives an overview of both the administrative and student sides of the online system.

5.6 Test Security

The EOC Assessment test books and online assessment are secure. Test Coordinators are instructed to keep the materials in a locked room or cabinet at all times when not in use. No testing materials may be photocopied, duplicated, scanned, or made accessible to personnel who are not responsible for testing. Additionally, written or oral discussion of specific EOC Assessment items breaches the security and integrity of the test. In accordance with the Standards, the *Test Coordinator's Manual* and *Test Examiner's Manual* contain explicit instructions about test security for Test Coordinators and Test Examiners.⁵ When the tests are delivered online, Test Examiners do not have access to the student screens for the online assessment, only to the test administrator features. In addition, a secure browser must be installed on each student computer prior to administration of the online assessments. Test items, as well as student responses, are encrypted during transmission to and from student computers.

5.7 Test Administration

5.7.1 Test Organization

Students take the Phase II EOC Assessments in one session. The session contains only selected response (SR) items. Each item consists of a stem followed by four response options. Answers are marked on a separate answer sheet. For the online assessment, the Phase II MO EOC Assessments also comprise one session. For each SR item, the student clicks an answer choice. Students are required to complete the practice tests on the DESE website prior to testing. These practice tests include instructions on how to use the tools in the system and practice questions for the students.

5.7.2 Test and Ancillary Materials

District Test Coordinators or School Test Coordinators are responsible for distributing all EOC Assessment materials to Test Examiners. The materials provided by Riverside Publishing and/or DESE include the following:

- *Test Examiner's Manual* (online and paper-and-pencil)
- *Test Coordinator's Manual*
- Building Identification Sheets
- Group Identification Sheets
- Student barcode labels
- Test books
- Answer sheets
- Math reference sheets (if applicable)
- Return kit materials

⁵ **Standard 5.7:** Test users have the responsibility of protecting the security of test materials at all times (p. 64).

Students need the following additional materials for the paper-and-pencil assessment; these materials are not provided by Riverside Publishing or DESE:

- No. 2 pencils
- Scratch paper

For the online assessment, each student needs a computer with a monitor, a mouse, and a keyboard. Adequate space should be left between workstations. Students can use scratch, grid, or draft paper and a writing utensil while taking the online assessment. The Test Examiner needs the following:

- A computer for logging on to the proctor interface
- A writing board and utensil

Additionally, students taking either the paper-and-pencil or online version may use a four-function calculator for the Algebra II and Geometry assessments. (This is not required.)

5.7.3 Preparing the Classroom and the Students

The *Test Examiner's Manual* contains specific instructions for teachers and other test administrators regarding how the classroom should be prepared for testing. These include the following:

- Planning for the distribution and collection of materials
- Planning the seating arrangement to prevent students from seeing other students' responses
- Eliminating distractions such as bells and telephones
- Using a "Do Not Disturb" sign on the door
- Removing from students' view any classroom maps, charts, or other materials that relate to the test content
- Making arrangements for students who may not finish testing in the allotted time

Before students begin the assessment using the online system, a representative of the district or school must do the following:

- Read the entire *Online Test Examiner's Manual*
- Run a system check on each workstation used for testing
- Ensure that the MO EOC browser is downloaded to each workstation for test delivery
- Read the frequently asked questions from the link on the Test Examiner's login page
- Input identification information for students who were not included in the MOSIS precode file
- Contact Riverside Publishing if any changes need to be made to the student roster
- Create a test session immediately before testing

Additionally, while students await proctor approval, the Test Examiner must set and verify class information and set students' testing status codes and/or accommodations information in the online system.

The *Test Examiner’s Manual* and *Online Test Examiner’s Manual* explain some ways teachers may prepare their students for testing, including the following:

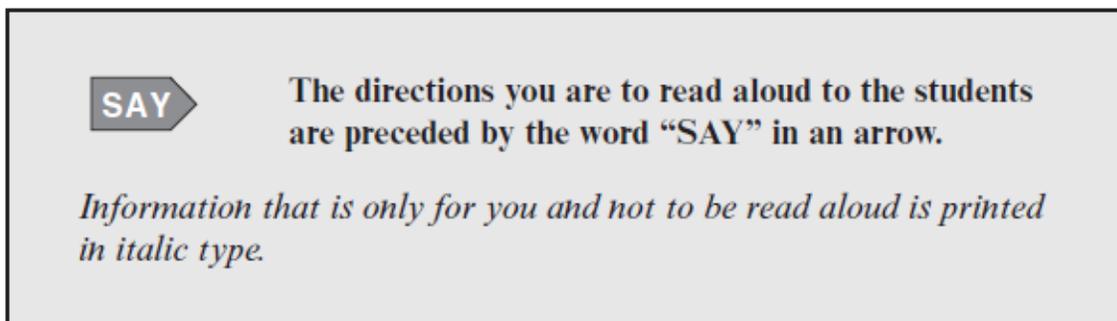

- Helping students approach the testing with a relaxed, positive attitude
- Encouraging and motivating students to do their best work
- Explaining test strategies, such as skipping harder items and coming back to them later
- Reassuring students that they will be given ample time to do their best work

Students are NOT allowed to use electronic devices, such as cellular phones, digital cameras, gaming devices, or scanners during the testing session. However, students may use four-function calculators during the Algebra II and Geometry test sessions.

5.7.4 Directions for Administration

In accordance with Standard 5.1,⁶ specific standardized directions for administration are printed in the *Test Examiner’s Manual*. Directions that are to be read aloud to the students are printed in **bold** type and have a callout arrow in the margin for clarity. Information for the teacher that should not be read aloud is in *italic* type. Figure 5.1 provides an example of the type styles used in the *Test Examiner’s Manual* to differentiate between spoken and unspoken instructions. Figure 5.2 provides an example of a script from the Government EOC Assessment. Figure 5.3 provides an example of a script from the online English I EOC Assessment.

Figure 5.1: Examples of Type Styles Used to Differentiate Between Spoken and Unspoken Instructions in the *Test Examiner’s Manual*

⁶ **Standard 5.1:** Test administrators should follow carefully the standardized procedures for administration and scoring specified by the test developer, unless the situation or a test taker’s disability dictates that an exception should be made (p. 63).

Figure 5.2: Example Script from the *Test Examiner’s Manual* for the Government EOC Assessment

Directions for Administering the Government Assessment

Teacher Directions:

Distribute the test books and answer sheets. Make sure each student has the correct answer sheet if student barcode labels were affixed before testing. Have the students write their name on the line provided on the front cover of the test book. Before administering the test, take a moment to have the students look through the test book.

Ensure that all students use a nonmechanical No. 2 pencil.

For students testing in Spring 2011 only, please fill in the FORM letter that corresponds to the student’s test book. The FORM letter must be included or scoring the assessment will be negatively impacted.

SAY For the questions on this test, you will select an answer from a list of given choices. Please record your final answers on the answer sheet. Remember to fill in the circle on the answer sheet that goes with the answer you chose. Your score on these questions will depend on how well you follow directions and show your understanding of Government.

SAY Open your test book to page 1 and read the directions. When you have finished reading the directions, turn to page 2.

Check to see that all students are on the correct page in their test books.

SAY When you come to the word “STOP,” you have finished. You may go back over the test and check your answers. When you have finished checking your answers, close your test book and sit quietly until everyone has finished. Do you have any questions?

When you are sure that all students understand the directions, continue.

SAY You may begin.

If a student does not understand a word, you may pronounce the word for the student, but do not define, explain, or paraphrase it. If a student has not finished in the allotted time and is making adequate progress, the student should be allowed to finish. Tests may not be returned to students to complete or to correct incomplete or inaccurate answers. When all students have finished the test,

SAY Stop. You have finished the test.

Collect all testing materials and secure them after accounting for all test books and answer sheets.

Figure 5.3: Example Script from the *Online Test Examiner's Manual* for the Online English I EOC Assessment

 For the questions in this session, you will select an answer from a list of given choices. Remember to check that the circle that goes with the answer you chose is filled in after you click it. Your score on these questions will depend on how well you follow directions and show your understanding of what you read. You may choose to look over the questions before reading the passage. You may NOT use a dictionary, thesaurus, or grammar handbook during this session of the test. See the Help button for instructions on how to use the system tools.

There are several important things to remember:

1. Read each question carefully and think about the answer. Then choose the one answer that you think is best.
2. If you do not know the answer to a question, mark it for review, skip it, and go on. You may return to it later.
3. When you finish the test, you may check over your work.

When you have finished checking your answers, click the End button, Exit the browser, and sit quietly until everyone has finished. Are there any questions?

5.8 Accommodations and Modifications

A student's IEP team has the responsibility and authority to determine individual accommodations to support and ensure his or her participation in the EOC Assessments. Allowable accommodations are intended to assist the student by reducing the effects of his or her disability without reducing performance expectations. Allowable accommodations for the EOC Assessments include the following:

- A student may receive a modified version of the testing materials, such as the Braille or Large Print edition.
- A teacher may present the test content to a student in a nonstandard way, such as by reading it aloud in English or in the student's native language, paraphrasing it, or using sign language. For the Phase II, English I Assessment, this will result in the lowest obtainable scale score (LOSS).
- A student may be allowed additional time to complete one or more sessions of the assessment.
- A student may use an assistive communicative device.
- A student may be tested individually or in a small group.
- A student may be allowed to use a computer, another word-processing device, or a teacher scribe to record his or her responses.
- A student may use other assistive materials such as a bilingual dictionary.

Modifications are alterations in the test that change construct-related requirements. The resulting information may not be equal to the information that might be obtained without

modifications. The following modifications for the Phase II EOC Assessments can be provided:

- Oral reading of the assessment, including paraphrasing questions
- Oral reading in native language
- Use of a bilingual dictionary for the English I Assessment

As noted above, the modifications listed may result in the lowest obtainable scale score (LOSS) on the EOC Assessments. For more information on accommodations and modifications and their effects on the interpretation of the EOC Assessment scores, see the Appendix to the *Test Examiner's Manual*.

In accordance with Standard 5.2,⁷ Test Examiners indicate an accommodation, when allowed by a student's IEP and used for the EOC Assessment, by filling in the bubble corresponding to the accommodation on page 1 of the answer sheet.

Table 5.1 contains information about the percentage of students who received each type of allowable accommodation for each EOC Assessment. The most prevalent type of accommodation across all five Phase II EOC Assessments was testing in a small group (provided to between 0.92% and 4.99% of students across assessments).

⁷ **Standard 5.2:** Modifications or disruptions of standardized test administration procedures or scoring should be documented (p. 63).

Table 5.1: Frequency and Percentage of Students Receiving Each Type of Allowable Accommodation on the 2010-2011 EOC Operational Assessments

Accommodation	English I		Algebra II		Geometry		Government		Am. History	
	Freq.	%	Freq.	%	Freq.	%	Freq.	%	Freq.	%
Braille	3	0.01	0	0.00	2	0.01	6	0.01	1	0.00

Testing in Small Group	1739	4.07	219	0.94	460	1.67	3068	5.04	1463	4.01
Other Setting	93	0.22	15	0.06	24	0.09	130	0.21	104	0.29

5.9 Materials Handling and Return

The *Test Coordinator's Manual* and *Test Examiner's Manual* contain detailed instructions for how schools and districts should collect and package the paper-and-pencil testing materials at the end of the test administration. For Test Examiners, these activities include, but are not limited to, the following:

- Collecting test books and answer sheets from the students
- Counting the test books and answer sheets and comparing the number to the totals from pretesting
- Returning all used and unused test books and answer sheets to the Test Coordinator
- Collecting all scratch paper used during testing
- Properly handling all contaminated test books (i.e., books having contact with bodily fluids such as blood or with any potentially hazardous material)
- Verifying that the barcode labels are affixed properly to the answer sheets
- Verifying that the information contained on the Student Information Sheet (SIS) is accurate and complete

For School Test Coordinators, these activities include, but are not limited to, the following:

- Collecting testing materials from the Test Examiners
- Counting all test books and verifying against the pretesting total
- Completing Group Identification Sheet for each class
- Verifying that the Building Identification Sheets are correct or completing new Building Identification Sheets if incorrect
- Returning all answer sheets and test books (scorable and nonscorable) to the District Test Coordinator
- Destroying all unused answer sheets and other nonsecure testing materials

After receiving the answer sheets and scorable and nonscorable test books from the School Test Coordinators, District Test Coordinators complete the following steps:

- Verify 100% return of test books
- Complete the Test Book Accountability Form and fax it to Riverside Publishing
- Verify that each group of scorable materials is accompanied by a Group Identification Sheet
- Verify that Group Identification Sheets are used consistently for session scorables

For the online system, the student needs to click the End button once he or she has finished testing to submit the test for scoring. No additional information is needed from the Test Examiner after the student has completed the test. All demographic information is edited or added by the test administrator before the student starts the assessment.

5.10 Summary

The distribution, administration, and collection of the EOC Assessments are carefully communicated and executed in the detailed *Test Examiner's Manual* and *Test Coordinator's Manual*. All standards related to test security, administration, and accommodations are adhered to throughout the process. The most important steps and procedures have been covered in this chapter. Readers interested in further detail should consult the *Test Examiner's Manual* and *Test Coordinator's Manual* for the EOC Assessments.

CHAPTER 6: SCANNING, SCORING, AND QUALITY CONTROL PROCEDURES

6.1 Introduction

This chapter describes the processes used to scan and score and to ensure quality control for the Missouri End-of-Course (MO EOC) Assessments. The Phase II EOC Assessment forms contained only selected response (SR) items and were processed and scored by Riverside Publishing. Sections 6.2 through 6.4 of this chapter describe the Riverside Publishing scanning, scoring, and quality control processes for the SR items.

6.2 Quality Control Overview

Riverside Publishing adheres to the guidelines listed in the SCASS/TILSA *Quality Control Checklist for Processing, Scoring, and Reporting* provided by the Council of Chief State School Officers (2003). Quality assurance in processing, scoring, and reporting is the highest consideration in all stages of score report delivery. Additionally, Standard 5.8⁸ of the Standards (AERA, APA, and NCME 1999) specifically addresses the issue of quality control in the scoring process. To comply with this standard, Riverside Publishing employed a set of checks at each stage in the process of scoring and reporting the SR items to ensure a zero error rate for the MO EOC Assessments. Riverside Publishing documented the various quality control procedures through a variety of reports and checklists during both the preproduction and post-production phases. Documentation took the form of issues logs and quality audit reports.

6.3 Preparation and Materials Check-In

6.3.1 Preparation for Processing

Before any MO EOC Assessment answer documents were processed for the field test or operational testing, Riverside Publishing programming staff conducted a complete check of scanning programs using the program specifications and a transfer file. A test set of documents was gridded to include all response ranges, ID ranges, blanks, double grids, all correct responses, all incorrect responses, and other scenarios, depending on the specified scoring rules. These mock data were then processed through the scanning program, the editing programs, and the scoring system. The resulting file was thoroughly hand checked to ensure that the machine was scanning correctly, that the pre-edit program was picking up the proper errors, that the post-edit program was accepting corrections properly, and that the scoring system was applying the answer keys correctly. If any errors were found in the programs, the programmer was notified to make the corrections, and quality control checks were run again.

Once the programs were found to be functioning correctly, a batch of live data was processed. This pilot run involved test results from one Missouri district. The resulting data file was put through the same quality control procedures described above, and documents were hand checked against the transfer file created. Riverside Publishing

⁸ **Standard 5.8:** Test scoring services should document the procedures that were followed to assure accuracy of scoring. The frequency of scoring errors should be monitored and reported to users of the service on reasonable request. Any systematic source of scoring errors should be corrected (p. 64).

quality control staff checked and verified the live data. All quality control checks were completed successfully before the rest of the live documents were released for processing. This procedure ensured that the scanning programs were accurate and reliable.

When the MO EOC Assessment documents were first checked in at the Riverside Scoring Service® (RSS), they were issued a barcode number and a color-coded sheet that included vital information about the school. The documents were put into barcoded containers that were scanned at each stage of processing to constantly track the location of a client's documents in the Scoring Center.

Next, RSS staff checked that document counts matched the Return Packing Form and that all submitted materials were complete and included fully completed header sheets. If not, the documents were tagged to alert the Scoring Project Manager and Riverside Publishing Customer Service that resolution was necessary.

6.3.2 Materials Check-In

When a shipment of MO EOC Assessment documents was delivered to the Riverside Publishing Scoring Center, the arrival date, time, carrier type, and number of boxes delivered was immediately recorded in the RSS database, thus starting the clock for processing and delivering score reports. As an additional quality step, one of Riverside Publishing's trained receiving clerks hand counted the boxes and entered the number into the RSS tracking system. Any discrepancies were entered into the alert system for resolution.

Box contents (answer sheets) were verified against the order for Scoring Services forms, and any discrepancies were entered into the RSS alert resolution system. Each order was issued a unique barcoded number that enabled the order to be tracked as it was processed through the RSS.

6.4 Materials Scanning

All documents were scanned using Scan Optics 9000M scanners, which use four mounted cameras (two on top and two on the bottom) to capture both the grayscale and the bitonal images of each page. As each document was scanned, a Print After Scan (PAS) number was printed on the edge of the document. The first six digits in the PAS number were identical to the numbers identifying the container in which the documents moved through the Scoring Center. The last digits represented the order of the document in the stack. The PAS number was used by RSS staff to identify the location of an answer document in the processing system. The scanner read preprinted codes at the top of the page to determine which document code should be used for editing and scoring. Image scanners captured the entire test page as if it were a photocopy.

6.4.1 Handling of Unscannable Documents

The scanner is programmed to detect anchor points and zones to capture the image. Occasionally, a page cannot be scanned and is automatically sent by the scanner to the rejection bin. When this occurs, the scanner stops. The scanning operator follows procedures to either scan the document correctly or insert an Unscannable Document Header along with the document or page that is unscannable. Some reasons that a

document might be unscannable include manipulation during the test administration or pages missing or removed from the answer document before it was submitted for scoring. Photocopied documents are also unscannable.

6.4.2 Resolution of n-Count Discrepancies

Throughout the scanning of the MO EOC Assessment documents, the scanning station was monitored to ensure that images were gathered for all answer documents submitted with each school's or district's materials. A Scan Integrity Report compared the scanned *n*-count with the expected *n*-count on each Group/Class Header Sheet. Any discrepancies were logged into the system and resolved through a physical check of the documents before the container passed to the next station. If a resolution could not be reached, the order was entered into the alert system.

6.4.3 Application of Editing Rules

Riverside Publishing has numerous quality control procedures in place to ensure the accuracy of the scanning of the MO EOC Assessment answer documents. The scoring process applied editing rules to each document as it completed the scanning stage. The editing rules identified conflicts caused either by the student or by the scanner. Examples of these conflicts are double marks, excessive omits, or light marks. Based on these rules, documents were placed in the editing queue for an editor to resolve the conflicts. To ensure that the scanners and the editing rules were working properly, a small percentage of documents from each batch was randomly selected to go to editing, even without any mistakes or errors. If an issue could not be resolved in the editing process, an alert was sent, and a Riverside Publishing alerts specialist contacted the MO EOC Assessments program manager, who worked with the particular school or district to resolve the issue as soon as possible.

Documents that could not be read by the scanner (for instance, because the images were too light, pages were bent, etc.) were manually entered. In these instances, the first editor manually key-entered the student responses. A different editor then manually keyed the student responses a second time. The second editor was not able to see the work of the first editor. Upon completion of the two separate key entries, the system notified the second editor if there were differences in the two entries. If discrepancies were identified, the document was reviewed to determine the correct response.

6.5 Summary

Quality assurance in processing, scoring, and reporting is the highest consideration in all stages of score report delivery. To comply with Standard 5.8 of the Standards, Riverside Publishing employed a set of checks at each stage in the process of scoring and reporting the SR items to ensure a zero error rate for the MO EOC Assessments. Riverside Publishing documented the various quality control procedures through a variety of reports and checklists during both the preproduction and post-production phases. Documentation took the form of issues logs and quality audit reports.

CHAPTER 7: SCALING AND EQUATING

7.1 Introduction

This chapter details the scaling and equating procedures implemented by Riverside Publishing for the 2010 and 2011 Missouri End-of-Course (MO EOC) Assessments. A pre-equating model (Kolen and Brennan, 2004) was used to produce equated forms for each EOC Assessment. The equating methods described in this chapter will serve to maintain consistency of the EOC Assessments score scales over time and ensure that the achievement levels are applied consistently from year to year.

This chapter begins with an overview of the equating design. Then the item response theory (IRT) model used for equating is described, and the model assumptions are examined. This is followed by a description of the steps used to carry out the scaling and equating for the 2009–2010 and 2010–2011 operational assessments.

7.2 Item Response Theory

WINSTEPS software (Linacre, 2006b) was used to accomplish the scaling and equating for the Missouri EOC Assessments. WINSTEPS is designed to produce a single scale by jointly analyzing data from students' responses. Items were calibrated using the Rasch model (Rasch, 1960; Wright and Stone, 1979).

Rasch scaling is “a method for obtaining objective, fundamental, linear measures from stochastic observations of ordered category responses” (Linacre 2006a, p. 10). One feature of the Rasch model that distinguishes it from classical test theory is the placement of estimates of a person's ability and the item difficulty on the same scale. The Rasch model expresses the probability of a correct response to an item as a function of the ability of the person and the difficulty of the item. In the Rasch model, the probability of a correct response to item i , given θ , is

$$P_i(\theta) = \frac{e^{(\theta-b_i)}}{1 + e^{(\theta-b_i)}},$$

where θ = latent trait, or ability, level and b_i = the difficulty parameter for item i .

7.3 Scaling and Equating

IRT pre-equating involves scaling item parameters and equating test forms based on field-test (FT) data before the forms are administered operationally. Note, however, that for the 2009–2010 year, the forms were pre-equated retroactively (after the Spring 2010 operational administration) to allow for a one-time recentering of the pools using Spring 2010 operational data. The approach used for pre-equating the EOC Assessments is described in the following steps:

1. Calibrate all 2009 standalone field-test forms concurrently without constraint.
2. Establish the base scale through calibration of the Spring 2010 operational forms without constraint.
3. Examine the stability of the common items from the two calibrations (i.e., the operational form items).
4. Recenter the 2009 item bank to the 2010 base scale.
5. Place the 2010 embedded field test (EFT) items onto the 2010 operational scale.
6. Perform Fixed Calibrations on the 2011 Operational Forms.

7.3.1 Step 1: Concurrent Calibration of 2009 Field-Test Forms

Table 7.1 shows the number of field-test forms and their composition for the Spring 2009 standalone field test. For each content area, forms contained only selected response (SR) items and were spiraled within each classroom. Assuming randomly equivalent groups, the complete pool of items for each content area was concurrently calibrated using the WINSTEPS software program, placing all items on a common scale.

Table 7.1: Spring 2009 Standalone Field Test

Assessment	Number of Forms	Number of Items Per Form
English I	14	36
Algebra II	10	36
Geometry	10	36
Government	10	36
American History	10	36

7.3.2 Step 2: Establishing the Base Scale

Three operational forms were constructed for the 2009–2010 test administrations. The forms were built to be consistent with the test blueprint using classical and IRT item statistics from the initial concurrent calibration. Figures 7.1 to 7.5 show the test characteristic curves (TCCs) for the three operational forms (Fall, Spring, and Summer) for each content area. The TCCs generally show the three forms to be similar across the full range of ability. In fact, all differences were within 5% of the range of test scores.

Figure 7.1: TCCs for Three Operational Forms for English I

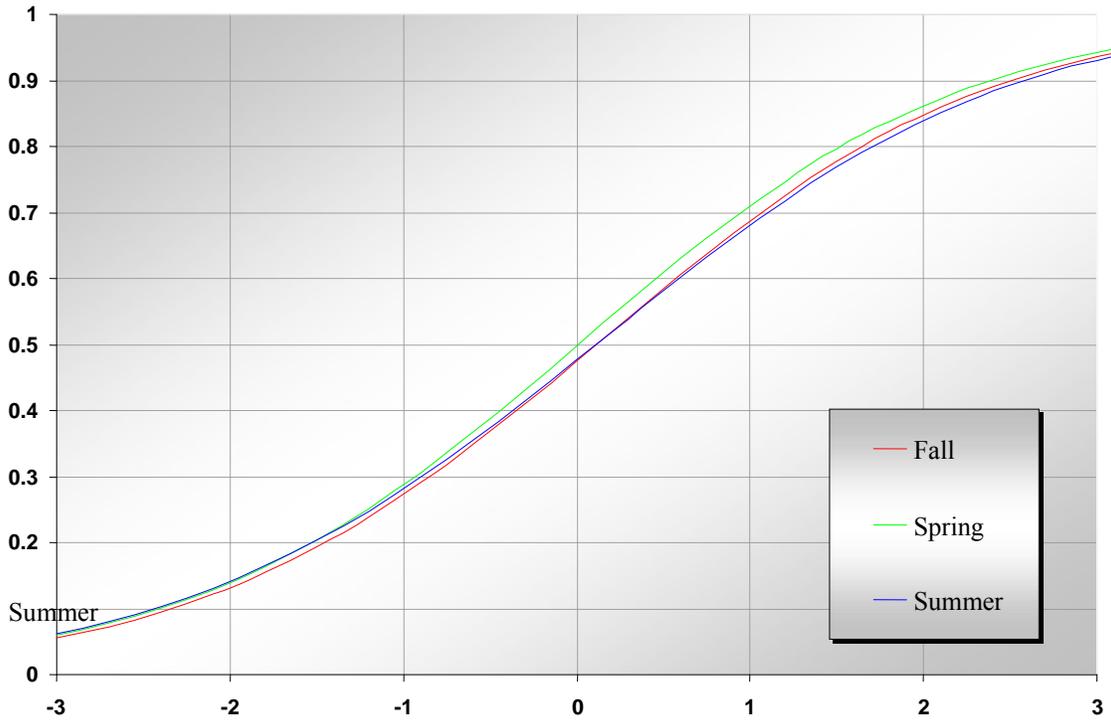

Figure 7.2: TCCs for Three Operational Forms for Algebra II

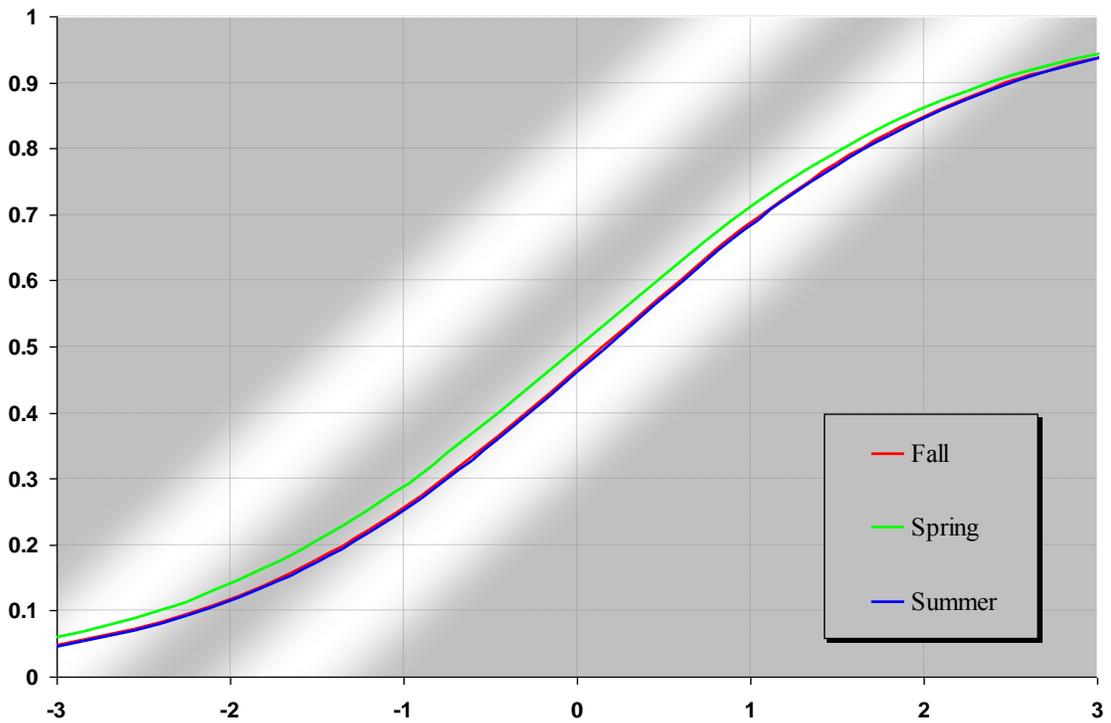

Figure 7.3: TCCs for Three Operational Forms for Geometry

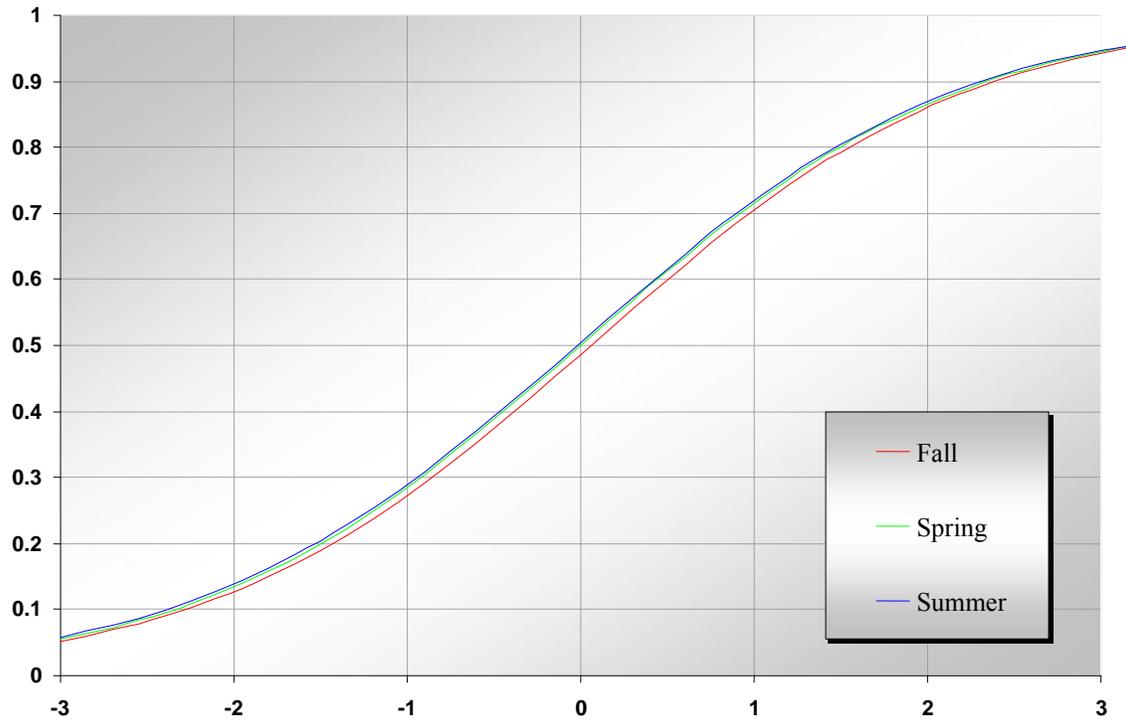

Figure 7.4: TCCs for Three Operational Forms for Government

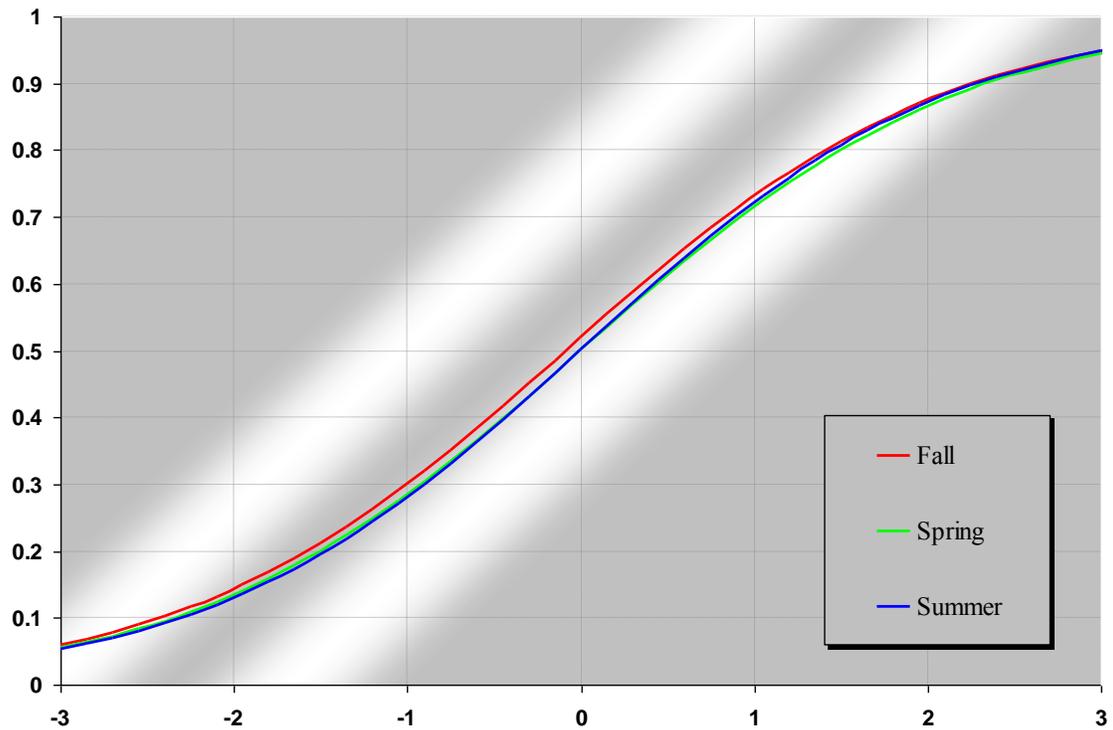

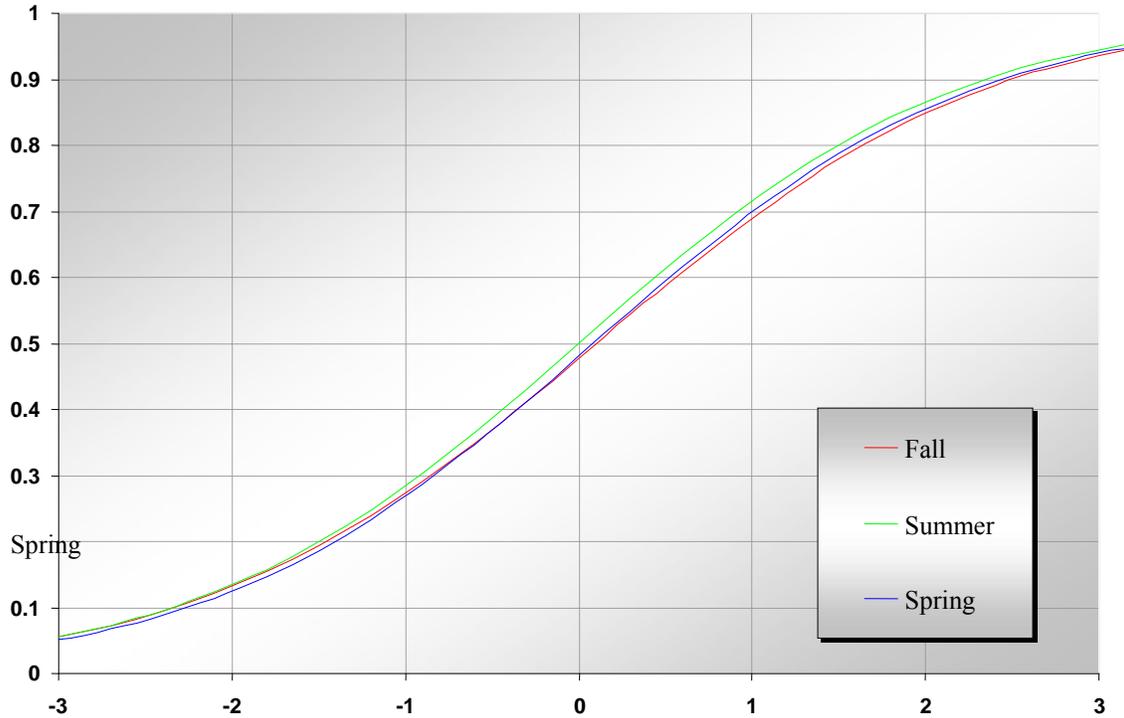

Figure 7.5: TCCs for Three Operational Forms for American History

The three forms were used for the Fall 2009, Spring 2010, and Summer 2010 administrations. The Spring 2010 form also contained new items embedded for field testing. No field-test items were included on the Fall and Summer forms due to the small sample sizes participating in those administrations. However, the Fall and Summer forms each contained one set of 12 additional items for English I and 10 additional items for the remaining subjects, making the test length the same across all three administrations. Table 7.2 shows the composition of the operational tests.

Table 7.2: Operational Test Design for Core Assessments

Content	Number of items	
	OP	EFT
English I	40	12
Algebra II	40	10
Geometry	40	10
Government	40	10
American History	40	10

OP = operational items; EFT = embedded field test items

To establish the base scale for each content area test, calibrations of the Spring 2010 operational forms were executed freely, without constraint. These calibrations had to be performed before a complete set of data was available. Tables 7.3 through 7.7 provide a comparison of the calibration set and complete set of data for the Spring 2010 operational test forms. Inspection of these tables shows that the demographics for the calibration samples were very similar to the census, or complete set of data.

Table 7.8 provides a comparison of classical item statistics for the item pool, based on 2009 field-test data, and for the Fall 2009, Spring 2010, and Summer 2010 operational forms, based on the Spring 2010 operational test administration for each content area. The comparison includes the percentage of items with *p*-values less than 0.3 and point-biserial correlations less than 0.1. Items with values below these criteria are typically considered low performing and are excluded from operational forms. However, such items may be included if the item pool is limited or if content considerations justify keeping an item. For example, an item may have poor field-test statistics because of examinee motivational issues or because content is not currently being taught. Examination of the summary statistics in Table 7.8 generally supports test development efforts in selecting the highest-quality items for inclusion in each operational form. Summary statistics for the Spring 2010 operational administration are provided in Table 7.9.

Table 7.8: Comparison of 2009 Item Pool with 2009–2010 Operational Test Forms

Because the Rasch model is the basis of all scoring and scaling analyses associated with the EOC Assessments, the utility of the results from the Spring 2010 administration depends on the degree to which the assumptions of the model are met, as well as the degree to which the test data fit the model. The assumptions of the Rasch model are that (1) the data are unidimensional and (2) the data have the quality of local independence, meaning that responses to one item do not depend on responses to another item. The sections that follow address these assumptions and include evaluations of the dimensionality and local independence of the data, as well as fit indices.

7.3.2.1 Assessing Unidimensionality of the Data

WINSTEPS provides a residual-based, unrotated principal components analysis (PCA) that can be used to assess the unidimensionality assumption of the Rasch model. The purpose of the analysis is to reveal contrasts between opposing factors by showing the variance explained by factors not accounted for by the Rasch model. That is, the Rasch dimension is removed first, and the residual variance is then analyzed. Consequently, with this analysis, one does not want to identify a second dimension that accounts for a practically significant amount of residual variance.

Ideally, additional factors will be at the “noise” level, implying that there are no other shared dimensions in the data. Because the WINSTEPS standardized residuals are modeled to have unit normal distributions, which are independent, a PCA of these residuals should look similar to a PCA of random normal deviates. Simulation studies (such as Smith and Miao, 1994) indicate that the largest component in a set of random normal deviates would have an eigenvalue of about 1.4, which represents a small percentage of variance explained (i.e., less than 5%).

Table 7.10 shows the results of the PCA for the Spring 2010 operational form for each content area. For each analysis, the secondary dimension has an eigenvalue representing fewer than two items (less than 5% of the total variance) and, therefore, is of little practical importance.

Table 7.10: Results of the PCA for the Spring 2010 Operational Tests

Content	Total Units (Items)	Second Dimension Eigenvalue	Second Dimension % of Total Variance Explained	% of Unexplained Variance	Second Dimension % of Unexplained Variance
English I	40	1.6	4.1	65.4	2.7
Algebra II	40	1.6	3.9	65.1	2.6
Geometry	40	1.6	4.1	58.1	2.4
Government	40	1.7	4.1	64.2	2.7
American History	40	1.7	4.4	71.1	3.1

7.3.2.2 Assessing Local Independence of the Data

Based on the PCA, WINSTEPS also provides standardized residual correlations that can be used to assess the local independence assumption of the Rasch model. The purpose of the analysis is to detect dependency between pairs of items. Figures 7.6 to 7.10 provide screen shots from WINSTEPS Table 23.99 (Linacre, 2006b) for each content area from the Spring 2010 operational test administration. Results of these analyses generally support the assumption of local independence. More specifically, values for standardized residual correlations were generally low (i.e., had absolute values below 0.10), indicating little dependency between pairs of items.

7.3.2.3 Assessing Data Fit to the Model

WINSTEPS provides two statistics for indicating how well the data fit the Rasch model. Infit (inlier-sensitive or information-weighted fit) is sensitive to aberrations in item response patterns at the examinee’s ability level. High infit statistics indicate unexpected responses to items that are well targeted to the examinee’s ability. Low infit statistics, while not a threat to measurement, may indicate over-fit of the data to the model (resulting in Guttman-like patterns) that may result in artificially inflated reliability statistics. Outfit (outlier-sensitive fit) is sensitive to outliers (in other words, to aberrant responses to items with difficulty far from a person’s ability). High outfit values may indicate lucky guessing or careless mistakes. Relatively speaking, extremely high infit values are believed to be a greater threat to the measurement process than extreme outfit values.

Infit and outfit can be expressed as a mean square (MS) statistic or on a standardized metric (z). Both should be considered because they provide different perspectives: MS values are more oriented toward practical significance, while standardized values are more oriented toward statistical significance. Fit statistics expressed as mean squares (statistically, a chi-square statistic divided by its degrees of freedom) show the degree of practical distortion in the measurement. The expected value is 1.0, with values less than 1.0 indicating overfitting items (too predictable) and values greater than 1.0 indicating underfitting items (unpredictability, too much noise). Rules of thumb regarding “practically significant” MS fit values vary. Wright and Linacre (1994) suggest that

reasonable MS fit values range from 0.8 to 1.2 for SR items. Others believe that reasonable test results can be achieved with values from 0.5 to 1.5. Riverside Publishing has typically considered values outside the range of 0.7 to 1.3 to be outside the range of acceptable fit.

Fit statistics expressed as *z*-scores (standardized unit normal deviates) offer a means to statistically test model fit. Standardized fit statistics show the degree of statistical improbability in the data (i.e., its significance) if the data actually do fit the model. The expected value of standardized fit statistics is 0.0, with values significantly less than 0.0 indicating too much predictability and values significantly greater than 0.0 indicating lack of predictability. Also, *z*-scores may be affected by sample sizes. For example, in a large sample, the test of interest might show a statistically significant difference. In practice, the difference might not be important.

Tables 7.11 to 7.15 provide summary statistics, including summary fit statistics, for the Spring 2010 operational test calibrations, which were used to establish the base scale for the EOC Assessments. The evaluation of fit values, specifically MS infit, yielded these results: Infit values for English I ranged from 0.87 to 1.20, values for Algebra II ranged from 0.89 to 1.15, values for Geometry ranged from 0.83 to 1.27, values for Government ranged from 0.79 to 1.27, and values for American History ranged from 0.86 to 1.18. The fit values and output files are based on the local runs using WINSTEPS version 3.6.4 (Linacre, 2006b). Tables 7.16 to 7.20 provide Rasch difficulties and item fit statistics.

7.3.2.4 Establish Scaling Transformations

Total scores for the EOC Assessments were reported in scale scores with a range of 100–250. A scale score of 200 represents the cut point between Basic and Proficient, and a scale score of 225 represents the cut point between Proficient and Advanced. The scale score ranges are displayed in Table 7.21.

Table 7.21: Scale Score Ranges for EOC Assessment Achievement Levels

EOC Assessment	Achievement Level	Scale Score Range
English I	Below Basic	100 to 176
	Basic	177 to 199
	Proficient	200 to 224
	Advanced	225 to 250
Algebra II	Below Basic	100 to 181
	Basic	182 to 199
	Proficient	200 to 224
	Advanced	225 to 250
Geometry	Below Basic	100 to 181
	Basic	182 to 199
	Proficient	200 to 224
	Advanced	225 to 250
Government	Below Basic	100 to 178
	Basic	179 to 199
	Proficient	200 to 224
	Advanced	225 to 250
American History	Below Basic	100 to 181
	Basic	182 to 199
	Proficient	200 to 224
	Advanced	225 to 250

To produce these scale score ranges, linear transformations were applied to theta estimates and scale scores. The following formula was used to obtain the slopes and intercepts for the transformation functions:

$$sc(y) = \left[\frac{sc(y_2) - sc(y_1)}{\theta_2 - \theta_1} \right] y + \left\{ (sc(y_1) - \left[\frac{sc(y_2) - sc(y_1)}{\theta_2 - \theta_1} \right] \theta_1) \right\},$$

where θ_1 and θ_2 are person parameter estimates that correspond to the cut score points, and $sc(y_1)$ and $sc(y_2)$ are scale score points. This formula was adopted from Kolen and Brennan (2004, p. 337). For the Spring 2010 base scale, $sc(y_1)$ was 200 and $sc(y_2)$ was 225. Slopes and intercepts of the transformation functions are summarized in Table 7.22. These same slopes and intercepts will be applied to all future forms for each content area.

Table 7.22: Summary of Slopes and Intercepts of Theta to Scale Score Transformation Functions by Content Area

	Basic			Proficient			Advanced			Slope	Intercept
	Raw Score	Theta	Scale Score	Raw Score	Theta	Scale Score	Raw Score	Theta	Scale Score		
English I	16	-0.44	177	25	0.58	200	33	1.70	225	22.24	187.17
Algebra II	16	-0.45	182	24	0.46	200	33	1.71	225	20.06	190.76
Geometry	17	-0.36	182	24	0.47	200	32	1.60	225	22.12	189.57
Government	15	-0.56	179	25	0.56	200	34	1.86	225	19.11	189.37
Am. History	19	-0.11	182	25	0.56	200	32	1.49	225	26.64	185.19

In addition to the above scaling transformation, the following rules were applied for the Fall 2009 operational tests:

- The raw score cut (e.g., for Proficient) was selected as the lowest raw score associated with a rounded scale score of 200. The same strategy was also followed for a scale score of 225.
- If there was no raw score associated with a rounded scale score of 200, the raw score with the highest scale score below 200 was selected as the cut score and assigned a scale score of 200. For example, if two consecutive raw scores were associated with rounded scale scores of 198 and 201, the scale score of 198 was moved up to 200. The same strategy was also followed for a scale score of 225.
- Scale scores below 100 were rounded up to 100.
- Scale scores above 250 were rounded down to 250.
- For each test, for a perfect raw score, the scale score was set to 250.

7.3.3 Step 3: Examine Stability of the Common Items

While the concurrent calibrations following the 2009 standalone field test were sufficient for developing a common scale for the item pools and for building alternate forms (see Step 2), the Spring 2010 operational administration of the EOC Assessments was chosen as the base form. To equate or recenter the Spring 2009 item pool to the Spring 2010 base scale, the Rasch values for the common items (i.e., the Spring 2010 operational items) were fixed to the 2010 parameter estimates. Next, using the Spring 2009 standalone field-test data, the concurrent calibration with the complete pool of items was repeated, this time with the 2010 operational item parameters fixed to their Spring 2010 values. Before completion of the concurrent calibrations, the stability of the common items was assessed for each content area.

The stability of common items should be examined visually and statistically (Kolen and Brennan 2004). For example, scatterplots can be used to check visually for outlier common items. The scatter points for items that function similarly should line up along a straight line. Outlier items will not fall on the straight line and thus can be seen visually. In addition to a visual examination, an analytical study of the stability of common items may be performed. A 0.30-logistic unit should be applied as a cut criterion for removing “unstable” common items (Miller, Rotou, and Twing 2004).

To study the stability of the common items, the displacement value for each operational item (i.e., the common items) was evaluated after calibrating the items with the operational items fixed, or anchored, to their Spring 2010 difficulty values. Any common item with a displacement greater than 0.30 logits was removed from the common item set and treated as a new item. The fixed calibration was then performed again with the unstable common item free to be estimated. The displacement value for each of the remaining common items was then re-evaluated. As with the previous step, any outlier items identified during this procedure were removed from the rescaling process. Table 7.23 shows the number of items dropped from the set of operationally administered items (i.e., the common set of items) for instability. Figures 7.11 to 7.15 show displacement plots for the final set of common items used to recenter each content area's item bank or pool of items.

Table 7.23: Number of Items Dropped from the Common Set of Operational Items

Subject	Number of Items Dropped
English I	12
Algebra II	14
Geometry	12
Government	3
American History	7

Figure 7.11: Displacement Plot of Stable Linking Items for English I

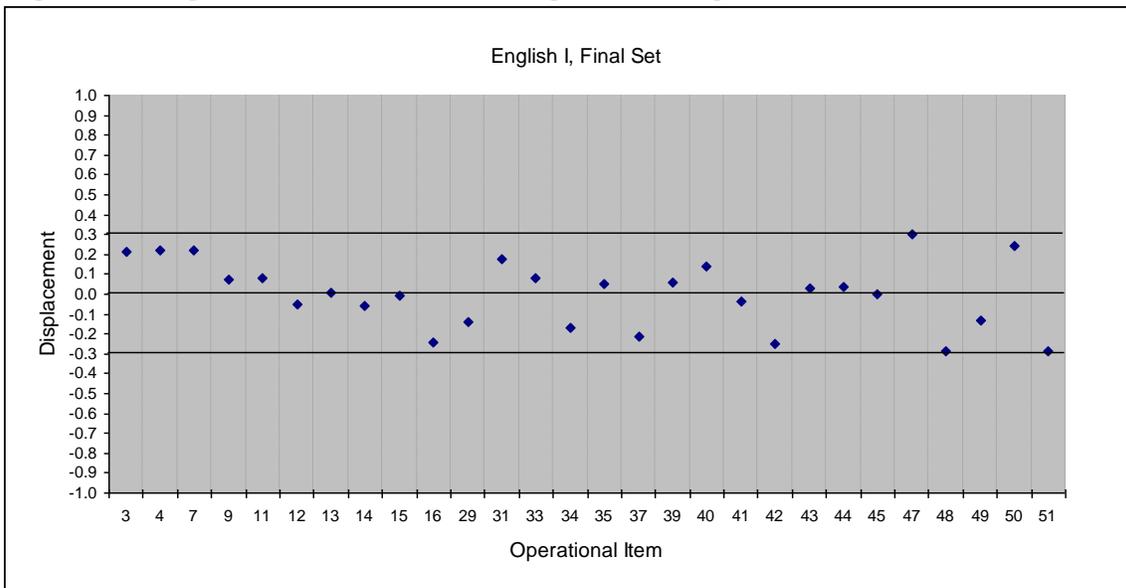

Figure 7.12: Displacement Plot of Stable Linking Items for Algebra II

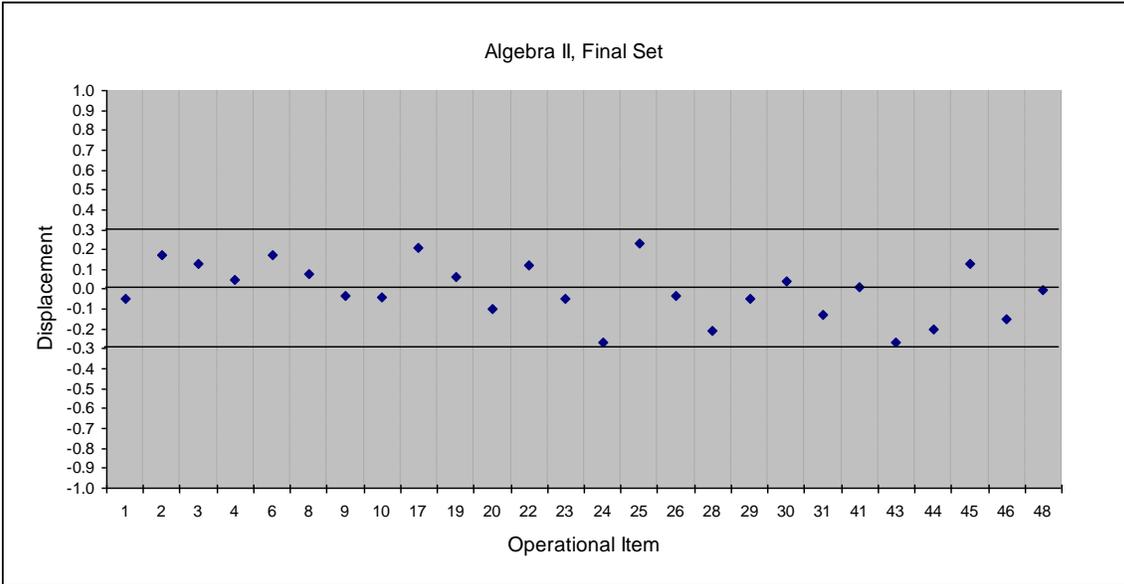

Figure 7.13: Displacement Plot of Stable Linking Items for Geometry

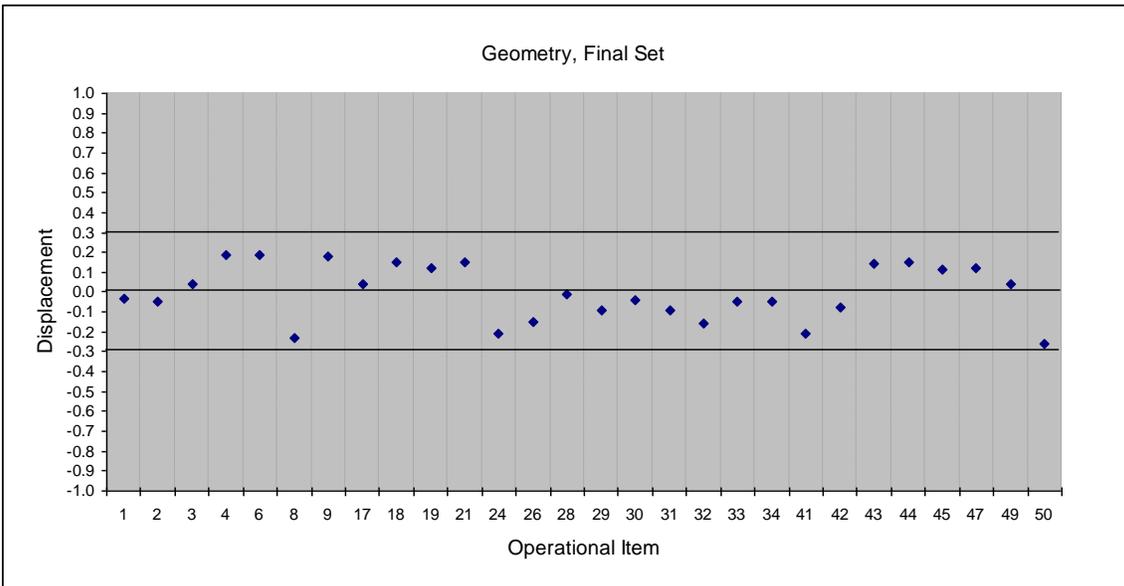

Figure 7.14: Displacement Plot of Stable Linking Items for Government

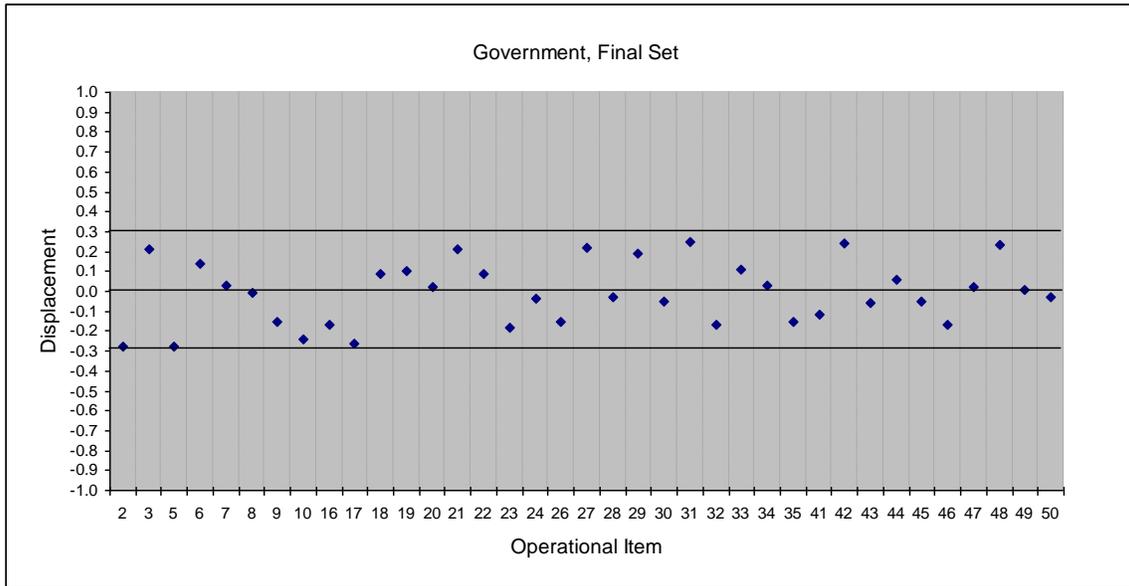

Figure 7.15: Displacement Plot of Stable Linking Items for American History

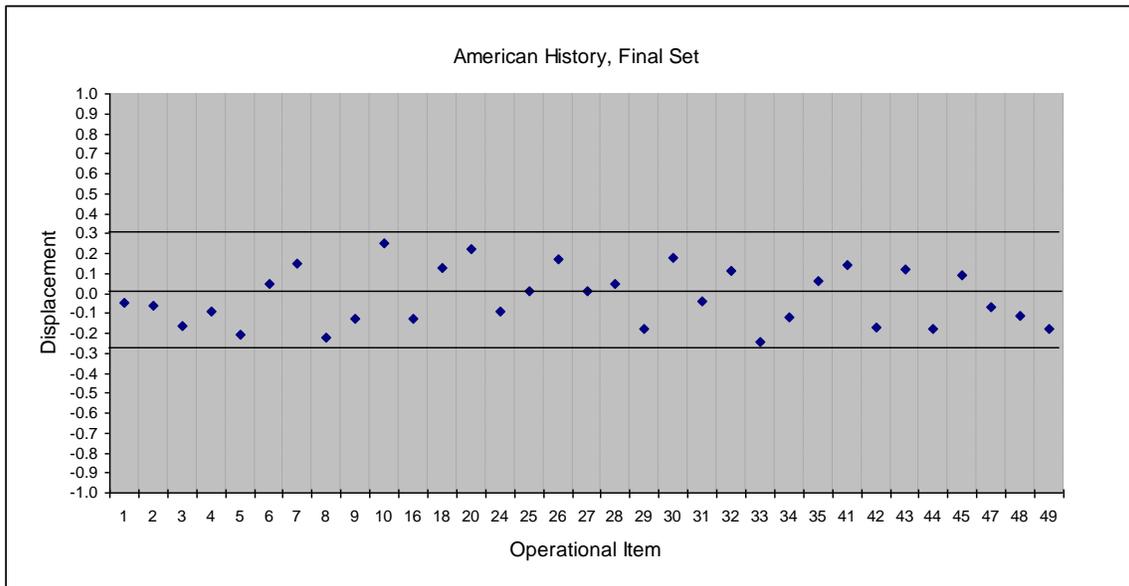

Table 7.24 summarizes displacement statistics for the common items generated with the anchored calibrations. Linacre (2006a) suggests that “random displacements of less than 0.50 logits are unlikely to have much impact in a test instrument” (p. 203). However, as discussed above, the 0.30 criteria for removing unstable items was used. Table 7.24 shows that all displacement statistics for the common items are smaller than 0.30, indicating that the anchored calibrations converged well.

Table 7.24: Displacement Statistics for the Spring 2010 Recentering of the Item Pool

7.3.4: Step 4: Recenter the 2009 Item Bank

To equate or recenter the 2009 item pool to the 2010 base scale, the Rasch values for the stable common items (i.e., the stable Spring operational items) were fixed to the 2010 parameter estimates. With the Spring 2010 operational item parameters fixed, the rest of the item pool was equated to the Spring 2010 base scale. Note that it was assumed that the latent traits measured by the 2010 operational tests and the 2009 field tests were the same. Given the common items used across the two testing events and given that the blueprint and item specifications were the same, it is reasonable to assume that the underlying latent trait or construct measured by each assessment was the same. The above procedure was a one-time-only activity occurring after the first operational administration. With the pool recentered, the Fall 2009 forms were retroactively equated to the Spring 2009 forms. Although pre-equating occurred after the administration of the Fall 2009 forms, the results were not reported until after the Spring 2010 administration and the item pool recentering. Tables 7.25 to 7.34 provide the raw score to scale score conversions for Fall 2009 and Spring 2010, respectively.

Table 7.25: Raw Score to Scale Score Conversions for Fall 2009, English I

7.3.5 Step 5: Place the 2010 Embedded Field Test Items onto the 2010 Scale

The 2010 EFT test items were treated separately in this process to avoid having them influence calibration of the operational items and the establishment of the base scale. To bring the field-test items onto the base scale, a second calibration of the Spring data, fixing the 2010 operational parameter estimates, was conducted.

For the 2010–2011 operational administrations, three new forms were built for each content area from the calibrated and recentered item pools (one each for Fall, Spring, and Summer). These new forms are pre-equated to the base form because, after the recentering of the pool, all previously field-tested items are on the operational scale. For all subsequent years, one new form will be built from the calibrated pool for the Spring administration. A form reuse plan will be implemented for the Fall and Summer administrations. Each Fall and Summer form from the 2009–2010 and 2010–2011 administrations will be used in alternating years and in alternating administrations.

For the new Spring form in 2011, new items were field tested. The field test items will be scaled to the pool, using a calibration in which the operational test item parameters are fixed and the new field test items are free to be estimated. This process will allow all new items for all Spring form administrations to be placed on the same EOC Assessment scale as the other items in the pool.

As outlined above, not only can the pre-equating model be used to annually build alternate test forms, but by using the embedded field testing approach, the Missouri Department of Elementary and Secondary Education (DESE) will also be able to maintain its item pools.

7.3.6 Step 6: Perform Fixed Calibrations on the 2011 Operational Forms

To place the 2010–2011 operational forms onto the 2009 scale, an anchored item calibration was performed by fixing the parameters with the estimates resulting from Step 5 above. Figures 7.16 to 7.20 show the TCCs for the three operational forms (Fall, Spring, and Summer) for each content area. The TCCs generally show the three forms to be similar (differences were within 5% of the range of test scores) across the full range of ability.

Figure 7.16: TCCs for Three Alternate Forms for English I for the 2011 Test Administration

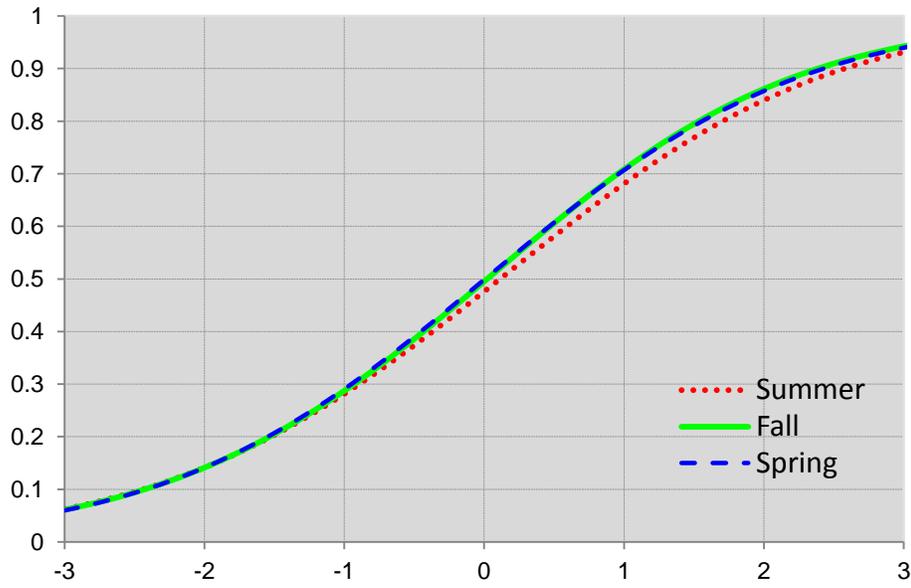

Figure 7.17: TCCs for Three Alternate Forms for Algebra II for the 2011 Test Administration

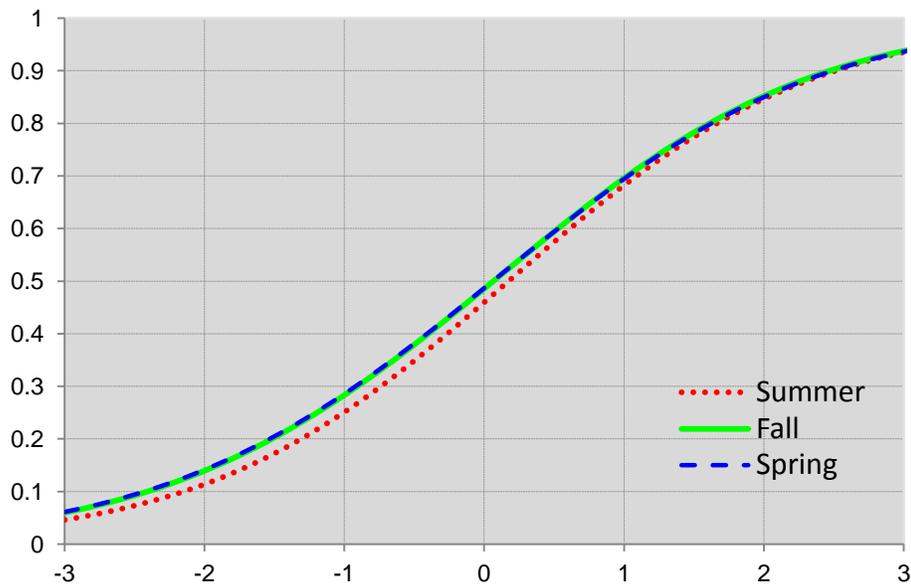

Figure 7.18: TCCs for Three Alternate Forms for Geometry for the 2011 Test Administration

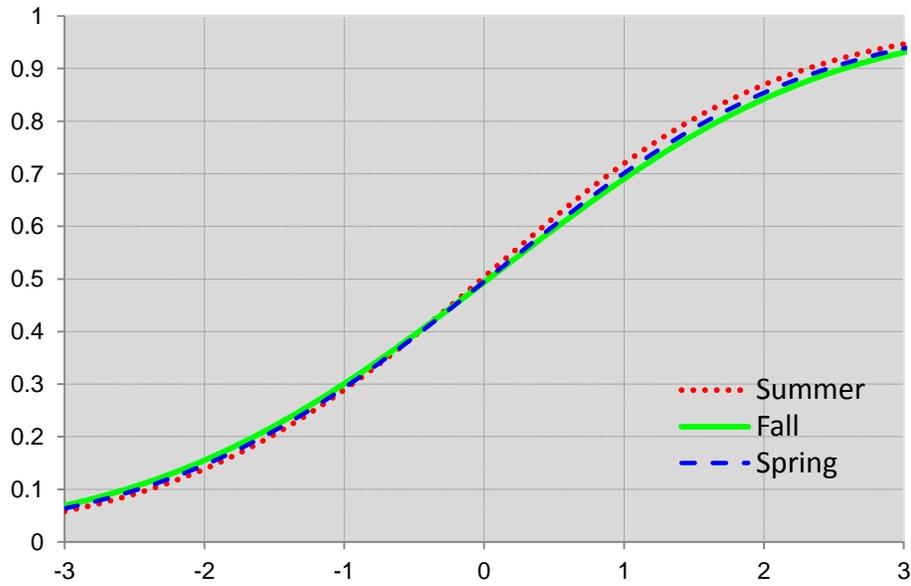

Figure 7.19: TCCs for Three Alternate Forms for Government for the 2011 Test Administration

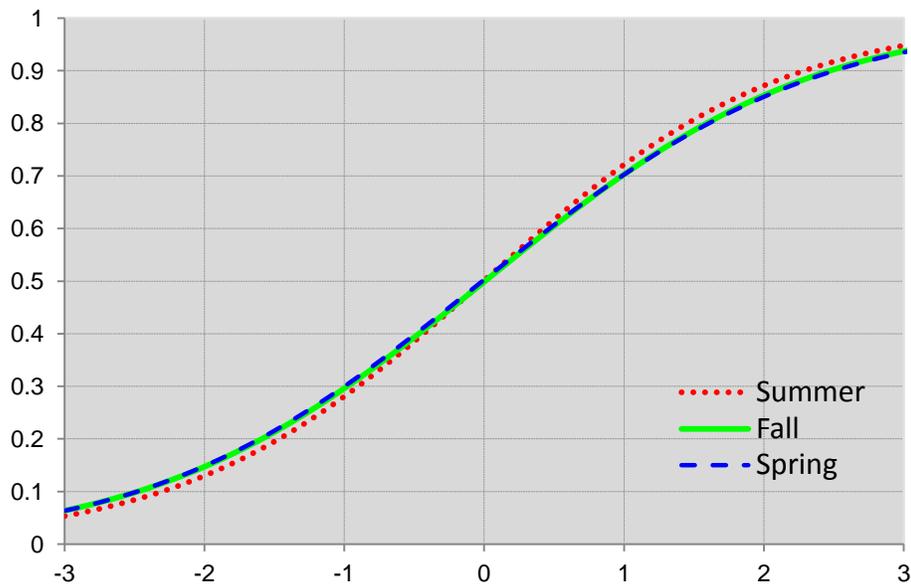

Figure 7.20: TCCs for Three Alternate Forms for American History for the 2011 Test Administration

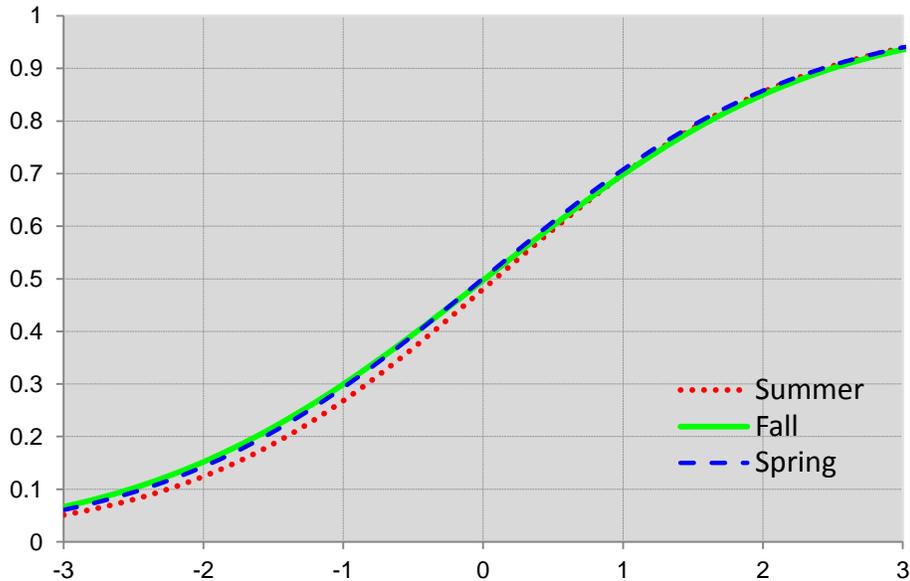

Table 7.35 provides a comparison of classical item statistics for phase II item pool and for the Summer 2010, Fall 2010, and Spring 2011 operational forms based on the 2010–2011 operational test administration for each content area. The comparison includes the percentage of items with p -values less than 0.3 and point-biserial correlations less than 0.1. Items with values below these criteria are typically considered low performing and are excluded from operational forms. However, such items may be included if the item pool is limited or if content considerations justify keeping an item. For example, an item may have poor field-test statistics because of examinee motivational issues or because content is not currently being taught. Examination of the summary statistics in Table 7.35 generally supports test development efforts in selecting the highest-quality items for inclusion in each operational form. Summary statistics for the Spring 2011 operational administration are provided in Table 7.36.

Table 7.35: Comparison of Phase II Item Pool with 2010–2011 Operational Test Forms

Subject	Item Set	% p -Value < 0.3	% Point-Biserial < 1.0
English I	Phase II Bank	16.8%	17.4%
	Fall	2.5%	5.0%
	Spring	0.0%	5.0%
	Summer	0.0%	12.5%

Table 7.36: Summary Statistics for the Spring 2011 Operational Administration

Content	Total Items	Total Points	Minimum	Maximum	Mean (Raw Score)	SD (Raw Score)
English I	40	40	2	40	25.19	6.957
Algebra II	40	40	1	40	23.29	6.382
Geometry	40	40	3	40	23.28	6.497
Government	40	40	1	40	25.24	6.936
American History	40	40	1	39	23.13	6.260

Because the Rasch model is the basis of all scoring and scaling analyses associated with the EOC Assessments, the utility of the results from the Spring 2011 administration depends on the degree to which the assumptions of the model are met as well as the degree to which the test data fit the model. As noted in Section 7.3.2, the assumptions of the Rasch model are that (1) the data are unidimensional, and (2) the data have the quality of local independence, meaning that responses to one item do not depend on responses to

another item. The analyses below address these assumptions and include evaluations of the dimensionality and local independence of the data, as well as fit indices.

Table 7.37 shows the results of the PCA for the Spring 2011 operational form for each content area. For each analysis, the secondary dimension has an eigenvalue representing fewer than three items (less than 5% of the total variance) and, therefore, is of little practical import.

Table 7.37: Results of the PCA for the Spring 2011 Operational Tests

Content	Total Units (Items)	Second Dimension Eigenvalue	Second Dimension % of Total Variance Explained	% of Unexplained Variance	Second Dimension % of Unexplained Variance
English I	40	40	1.6	68.6	4.0
Algebra II	40	40	1.5	64.1	3.9
Geometry	40	40	1.8	64.9	4.4
Government	40	40	1.7	55.3	4.2
American History	40	40	1.9	64.6	4.8

Figures 7.21 to 7.25 provide screen shots from WINSTEPS Table 23.99 (Linacre, 2006b) for each content area from the Spring 2011 operational test administration. Results of these analyses generally support the assumption of local independence. More specifically, values for standardized residual correlations were generally low (i.e., had absolute values below .10), indicating little dependency between pairs of items.

Tables 7.38 to 7.42 provide summary statistics, including summary fit statistics, for the Spring 2011 operational test calibrations. The evaluation of fit values, specifically MS infit, yielded these results: Infit values for English I ranged from 0.82 to 1.18, values for Algebra II ranged from 0.87 to 1.16, values for Geometry ranged from 0.85 to 1.15, values for Government ranged from 0.85 to 1.21, and values for American History ranged from 0.87 to 1.14. The fit values and output files are based on the local runs using WINSTEPS version 3.64.2. Tables 7.43 to 7.47 provide Rasch difficulties and item fit statistics.

Table 7.38: Summary Statistics for the Spring 2011 Operational Test Calibrations for English I

CHAPTER 8: REPORTING

8.1 Introduction

The purpose of reporting assessment data is to communicate test results to students, their parents, their teachers, administrators, and other stakeholders. The Missouri End-of-Course (MO EOC) Assessment reports provide useful information for determining the performance of students in a particular district, school or classroom. These reports help describe students' knowledge of a given set of expectations, allowing educators to determine specific instructional needs, measure student mastery toward post-secondary readiness, provide evidence of accountability for Missouri and national programs, and evaluate educational programs. Additionally, districts may use locally designed assessments aligned to the Show-Me Standards and Course-Level Expectations (CLEs) to provide more detailed information for each student in specific test areas.

Paper reports are generated for all assessment windows following the Spring administration; therefore, for the Summer 2010, Fall 2010 and Spring 2011 assessments, the paper reports were generated and distributed following the Spring 2011 operational administration. However, teachers may access their students' raw scores for selected response items through an online interface shortly after the district's testing materials have been received for processing in each assessment window.

For each testing event, Riverside Publishing converts each student's raw score points earned into an EOC scale score, as described in Chapter 7: Scaling and Equating. A student receives an EOC scale score when he or she has made a valid attempt for the session. EOC scale scores range in value from 100 to 250. The EOC scale score determines the student's achievement level. For all content areas, a scale score of 200 to 224 is considered Proficient, and a scale score of 225 and above is considered Advanced. Each achievement level represents standards of performance for each assessed content area (English I, Algebra II, Geometry, Government, and American History). Achievement-level scores describe what students can do in terms of the content and skills assessed. These scores provide a way to compare test results with standards of academic performance. Panels drawn from Missouri's educational, business, and professional communities recommended the raw score cuts (based on the Spring 2010 test forms) to be used for each achievement level. These cuts were then reviewed and adopted by the Missouri State Board of Education. For more information on how the achievement levels were set, refer to Chapter 3: Achievement-Level Setting.

No test provides a perfect measure of a student's ability. This situation is expected because all tests have a known standard error of measurement (*SEM*). The *SEM* represents the amount of variability that can be expected in a student's test score because of the inherent imprecision of the test. For example, if the student were tested again, he or she would likely obtain a slightly different score. The range for this new score is provided as a standard error (*SE*) and gives an indication of the margin of error for the reported scale score.

8.2 Individual Student Report

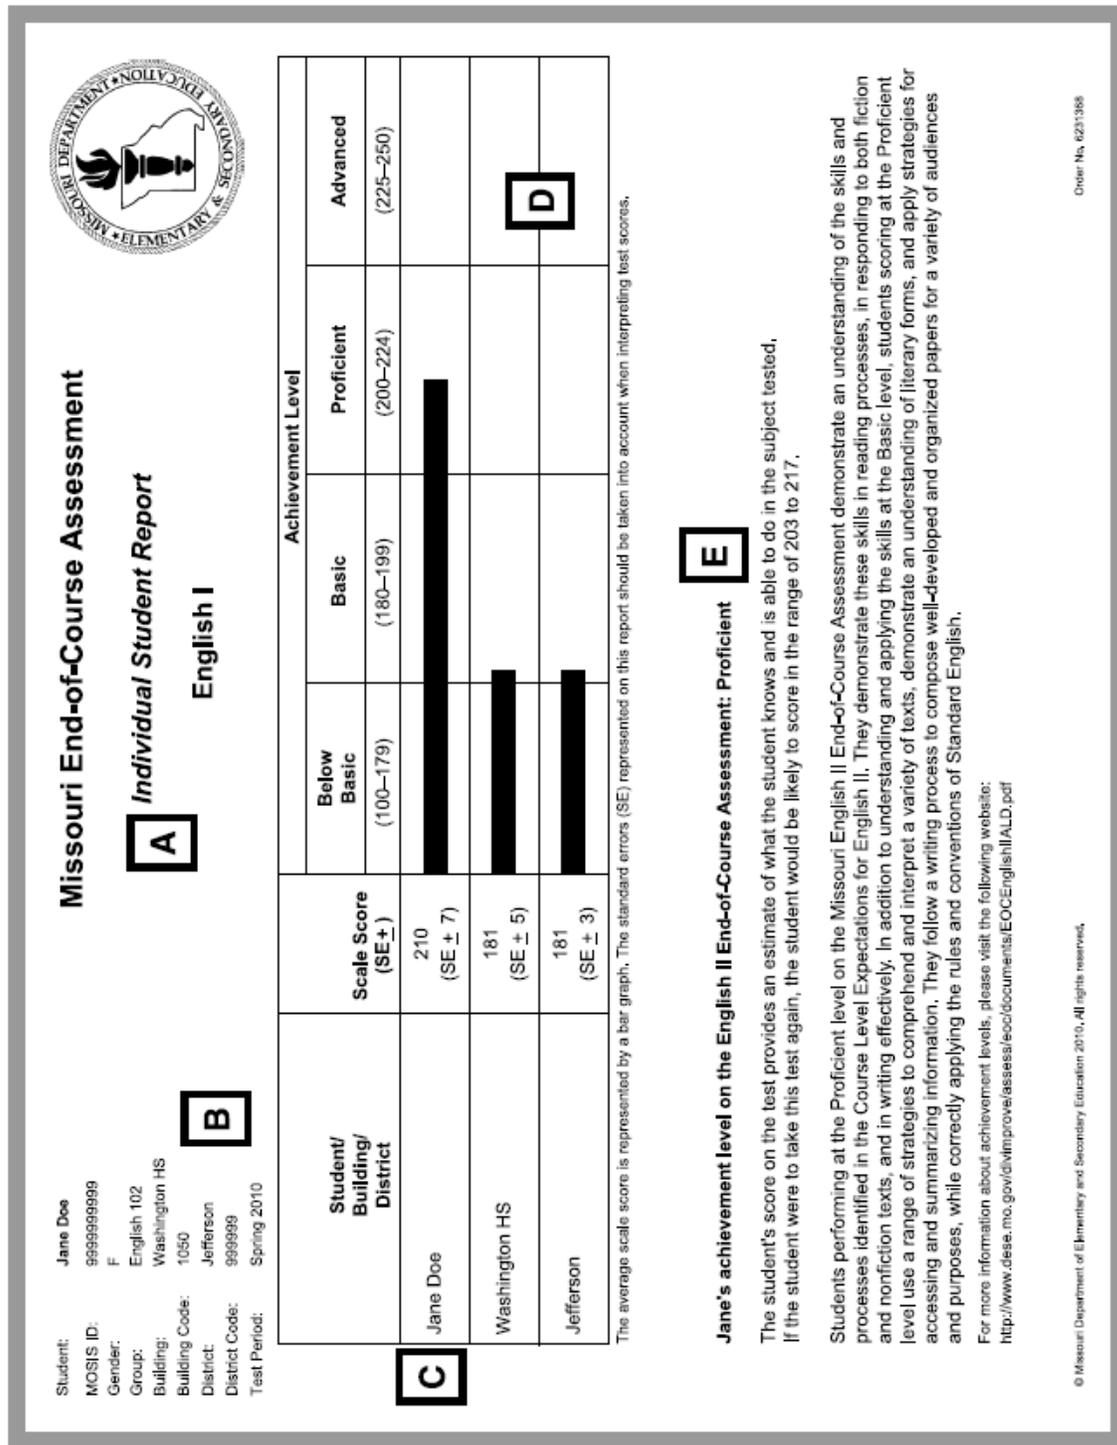

The 2010-2011 Individual Student Report provides information about performance on the EOC Assessment, describing the results in terms of four levels of achievement in a content area. It is used for measuring and reflecting an individual student's mastery toward post-secondary readiness for the content area. It is also used in instructional planning as a point of reference during a parent-teacher conference and for permanent record keeping. Teachers are informed that other sources of information should be used along with this report when determining the student's areas of strength or need.

On the report, achievement-level scores describe what students can do in terms of the CLEs for the content and skills assessed by the EOC Assessment. A student at the Proficient or Advanced level has met the standard.

A sample of the 2010-2011 Individual Student Report appears in Figure 8.1. A brief description of selected parts of the report is as follows:

- A. The heading of the Individual Student Report includes the content area for the results being presented. A separate report is produced for each content area tested.
- B. The Student Information section contains the biographic data for the individual student taking the assessment. Identifying information, including the MOSIS ID, gender, building, and district, is listed, followed by the test period.
- C. The individual student's results are presented numerically as a three-digit scale score with the *SE*. An accompanying bar graph to the right of the scale score illustrates the achievement level obtained by the student. Achievement levels (whether Advanced, Proficient, Basic, or Below Basic) are based on the scale score ranges listed beneath the Achievement Level heading in the table.
- D. The mean scale scores for the student's building and district are displayed in the two rows below the student's individual results. The mean scale score, with an associated *SE*, and the bar graph provide a way to view the individual's results in contrast to the group's results for the content area during the same test period.
- E. The narrative describes the student performance characteristics corresponding to the obtained level of achievement. The text is specific to the content area tested. At the bottom of the narrative is a URL for a website that provides additional information for all of the achievement levels for the content area.

Figure 8.1: Individual Student Report

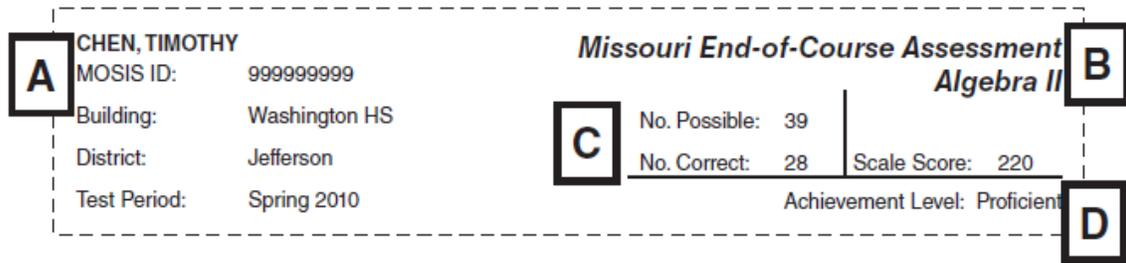

8.3 Student Score Label

The 2010-2011 Student Score Label provides a summary of a student's results on the EOC Assessment. A separate label is produced for each content area tested. The individual label provides the student's biographic data, raw score, scale score, and achievement level. The labels have adhesive backing so they can be easily transferred onto the student record folders.

A sample label is shown below in Figure 8.2. A brief description of selected parts of the label is as follows:

- A. The student's name and identifying information are provided on the left side of the label.
- B. The upper right side of the label shows the content area tested. If a student has results for more than one content area, the next label is printed below the first one.
- C. The middle of the label has the Number Possible and the student's raw score (Number Correct). A corresponding column to the right of these data contains the raw score's associated Scale Score.
- D. The student's achievement level is displayed in the lower right corner below the scores.

Figure 8.2: Student Score Label

8.4 Online Crystal Reports

Schools and districts are able to access summary level reports through an online reporting tool for the 2010-2011 school year. This tool allows district and school administrators to create on-the-fly reports containing information relevant to their data needs. There are several reporting options available through the online reporting tool, including administrative reports, adequate yearly progress (AYP) reports, achievement level reports, content standard reports, and item analysis reports.

For each subreport, a user selects various filters such as year, grade/content area, and level of reporting (state, district, or school) to create the desired report. For the Content Standard Reports, the user may also disaggregate results by various subgroups (e.g., race, disability).

8.4.1 Administrative Reports

These reports provide student-level test data. Based on only the MO EOC Assessment results, four reports are generated: MO EOC Scale Score Summary, MO EOC Student Demographic, Student Achievement Level, and Student Report.

MO EOC Scale Score Summary: This report lists each student in the school or district along with his or her MOSIS ID, testing year, content area, grade level, MO EOC scale score, and achievement level.

MO EOC Student Demographic: This report lists all students in the school or district along with their date of birth (DOB), content area, MOSIS ID, district ID, and relevant demographic information, including if the student has been in the district for less than a year, if the student has been in the building for less than a year, if the student is limited English proficient (LEP), the student's race, if the student qualifies for free and reduced lunch (SES), if the student has an Individualized Education Program (IEP), if the student is an English-language learner (ELL)/LEP who has been in the school for less than one year and in the country for less than three years, if the student is an LEP/ELL Title 3, the number of months the LEP/ELL student has been in the United States, the student's disability diagnosis, and if the student is Title 1.

Student Achievement Level: This report lists all students in a school or district along with the year of testing, content area, grade-level, achievement level, and MOSIS ID.

Student Report: For each school or district, this report contains the following information: student name, DOB, district student number, MOSIS ID, content area testing, grade level, achievement level, and scale score for each content area tested.

8.4.2 Achievement Level 4

These reports contain summary information on school or district performance in terms of the four MO EOC achievement levels. There are two types of achievement level reports: Achievement Level 4 Charts and Achievement Level 4 Report.

Achievement Level 4 Chart: This report charts the percentage of students classified as Proficient or Advanced on each MO EOC Assessment. State-level, district-level, and/or school-level performance may be displayed on the chart.

Achievement Level 4 Report: This report summarizes the number and percentage of students in each achievement level. This report is comprised of 10 columns: Total, content area, grade, year, number of accountable (ACC) students, number of reportable (REP) students, number and percentage of students classified in the Basic (B) achievement level, number and percentage of students classified in the Proficient (P) achievement level, number and percentage of students classified in the Advanced (A) achievement level, and mean MO EOC scale score. The first column, Total, shows if aggregate or disaggregated information is being shown. A key to the abbreviations is found in the bottom left corner.

8.4.3 Content Standard

The content standard reports summarize information about the content standards.

Content Standards Report: This report has 14 columns: content area, grade level, category/type, year, percentage of points earned on content standard 1 (CS-1), points possible (PP) on CS-1, percentage of points earned on CS-2, PP on CS-2, percentage of points earned on CS-3, PP on CS-3, percentage of points earned on CS-4, PP on CS-4, percentage of points earned on CS-5, and PP on CS-5. The category/type column indicates if the data are aggregated or disaggregated.

Content Standards Detail: This report shows the percentage of points each student achieved on each content standard within a particular content area.

8.4.4 Item Analysis Expanded

This set of reports provides detailed item-level results for the school or district, aggregated by either the content standard or the process standard.

Content Standard IBD EX: The Content Standard Benchmark Descriptor (IBD) Extended (EX) report contains item-level detail aggregated by content standard. The report is comprised of 11 columns: school code (SC), grade level (GR), standard number and description (desc.), code for the CLE, description of the CLE, depth of knowledge (DOK) of the item, session/item number where the item was in the operational test, question type (QT), points possible for the item, the average points (avg pts) earned by students in the district on that item, and percentage of points earned by students in the district on that item.

CHAPTER 9: SUMMARY STATISTICS

9.1 Introduction

This chapter provides descriptive statistics for the number correct raw score and for scale scores for each of the five Phase II Missouri End-of-Course (MO EOC) Assessments from the Summer 2010, Fall 2010 and Spring 2011 administrations. Statistics include N counts, means, standard deviations (SD), minimum and maximum values, and a variety of data disaggregations.

9.2 Descriptive Statistics for Total Raw Score

Descriptive statistics for total raw score are summarized in Table 9.1 by test administration and content area.

Table 9.1: Descriptive Statistics for Total Raw Score

Test Period	Subject	N	Minimum	Maximum	Mean	SD
Summer 2010	Algebra II	113	6	35	15.88	5.305
	American History	46	6	33	17.83	7.364
	English I	196	6	37	21.52	6.733
	Geometry	229	4	37	18.33	5.534
	Government	881	2	40	23.38	8.734
Fall 2010	Algebra II	511	6	39	24.32	6.830
	American History	652	7	38	23.06	6.387
	English I	327	1	38	25.78	8.146
	Geometry	878	5	39	24.01	7.190
	Government	17,589	1	40	24.04	6.768
Spring 2011	Algebra II	22,506	1	40	23.29	6.382
	American History	34,778	1	39	23.13	6.260

9.4 Descriptive Statistics for Scale Scores by Test Period and Subject

Descriptive statistics of scale scores and percentage distributions of students' achievement levels are summarized in Tables 9.3 and 9.4. Table 9.3 summarizes student scale scores by each Phase II EOC Assessment for the Summer 2010, Fall 2010 and Spring 2011 administrations. Table 9.4 lists the percentage and frequency of students in each achievement level.

Table 9.3: Scale Score Distributions for Each End-of-Course Assessment

Descriptive Statistics						
Test Period	Subject	<i>N</i>	Minimum	Maximum	Mean	<i>SD</i>
Summer 2010	Algebra II	113	157	236	184.86	12.881
	American History	46	138	232	180.65	23.747
	English I	196	144	250	194.15	19.763
	Geometry	229	137	248	184.97	14.790
	Government	881	131	250	198.60	22.561
Fall 2010	Algebra II	511	153	250	203.54	17.993
	American History	652	137	250	196.38	22.405
	English I	327	100	250	204.44	24.879
	Geometry	878	139	250	202.34	22.264
	Government	17,589	113	250	200.02	17.741
Spring 2011	Algebra II	22,506	111	250	200.81	17.036
	American History	34,778	100	250	195.89	21.327
	English I	42,171	116	250	202.63	20.870
	Geometry	26,088	127	250	199.27	18.857
	Government	39,907	113	250	203.30	18.925

Scale scores range from a minimum of 100 to a maximum of 250 for the five Phase II content areas administered in Summer 2010, Fall 2010 and Spring 2011. For English I, a minimum scale score of 177 is required to earn an achievement level of Basic. For Government, a minimum scale score of 179 is required to earn an achievement level of Basic. For Algebra II, Geometry, and American History, a minimum scale score of 182 is required to earn an achievement level of Basic. For all content areas, a scale score of 200 represents the minimum score to earn an achievement level of Proficient, and a scale score of 225 represents the minimum score to earn an achievement level of Advanced.

Table 9.4: Achievement-Level Distributions for Each End-of-Course Assessment

Summer 2010				Fall 2010				Spring 2011			
Subject	Achievement	Frequency	Percentage	Subject	Achievement	Frequency	Percentage	Subject	Achievement	Frequency	Percentage

9.5 Descriptive Statistics by Demographic Group

Descriptive statistics of scale scores and percentage distributions of students' achievement levels by demographic groups are summarized in Tables 9.5 through 9.20.

The demographic variables included are gender (Tables 9.5 and 9.13), ethnicity (Tables 9.6 and 9.14), migrant status (Tables 9.7 and 9.15), free and reduced lunch (FRL) (Tables 9.8 and 9.16), limited English proficient (LEP) (Tables 9.9 and 9.17), Title I (Tables 9.10 and 9.18), Individualized Education Program (IEP) (Tables 9.11 and 9.19), and accommodations (Tables 9.12 and 9.20).

CHAPTER 10: RELIABILITY

10.1 Introduction

The Missouri Department of Elementary and Secondary Education (DESE) is required by federal law to ensure that the instruments used to measure student achievement for school accountability provide reliable results. This chapter provides evidence that scores from the Missouri End-of-Course (EOC) Assessments measure student achievement in a reliable manner and that the size of the measurement error associated with reported test scores is reasonable, especially at the Proficient cut score.

10.2 Reliability and Measurement Error

10.2.1 Defining Reliability

Reliability refers to the consistency of student test scores. *Measurement error* refers to the random variability in the test scores. Both are indicators of the degree of precision in a test score. In general, measurement error and reliability are inversely related. When measurement error is large, reliability is small. Increasing reliability by minimizing measurement error is an important goal in the construction of any test.

Estimating the size of the measurement error associated with a true score is the key to estimating reliability. Errors in measurement can result from any of a multitude of factors, including environmental factors (e.g., testing conditions) and examinee factors (e.g., fatigue, stress). Feldt and Brennan (1989) note that “Quantification of the consistency and inconsistency in examinee performance constitutes the essence of reliability analysis” (p. 105). Classical test theory (CTT) provides a means for this quantification of examinee inconsistency (i.e., measurement error). This approach builds on the notion of an ideal error-free, or true, measurement score. Any observed measurement, such as test score X , is defined as a composite of true score, T , and its associated error:

$$X = T + \text{error.}$$

The definitions or assumptions in CTT lead to several important properties. For example, it can be demonstrated that observed score variance equals the sum of true score variance plus error variance:

$$\sigma_x^2 = \sigma_t^2 + \sigma_e^2.$$

The relationship among variance terms (i.e., $\sigma_x^2, \sigma_t^2, \sigma_e^2$) is critical to a more thorough understanding of important CTT concepts, including reliability and the standard error of measurement (*SEM*). For example, CTT equivalence reliability is defined as the correlation between observed scores on parallel forms, which is equal to

$$\rho_{x_1 x_2} = \sigma_t^2 / \sigma_x^2.$$

Reliability in CTT is thus conceptualized as true score variance divided by observed score variance. With just a few algebraic steps, the CTT definition of the *SEM* can be derived:

$$\sigma_e = \sigma_x \sqrt{1 - \rho_{x_1 x_2}}.$$

Although the conceptualizations of reliability and *SEM* are relatively straightforward, issues underlying the estimation of reliability are not.

10.2.2 Estimating Reliability

Reliability can be estimated via the correlation of scores on parallel forms (equivalence reliability) or from test-retest data (stability reliability), or it can be estimated from a single test administration (internal consistency reliability) using any one of a variety of techniques (e.g., Brown 1910; Cronbach 1951; Kuder and Richardson 1937). A very popular index for describing internal consistency reliability based on a single test administration is Cronbach's coefficient alpha, which provides an estimate of reliability that is mathematically equivalent to the average of all possible split-half reliability estimates.

10.2.3 Sources of Measurement Error

As noted above, errors in measurement can result from environmental factors and examinee factors. To reduce other sources of measurement error, the scoring of student responses to selected response (SR) items was done electronically. Scoring error may result from improper coding or extraneous marks on scannable response sheets. The size of this sort of error is usually small and is controlled through standardized test administration procedures (including detailed instructions on how to fill out response sheets and how to erase extraneous markings) and quality control measures implemented during the scanning process.

10.3 Evidence of Raw-Score Internal Consistency

Consistency of individual student performance was estimated using Cronbach's coefficient alpha. As previously noted, coefficient alpha provides an estimate of reliability that is mathematically equivalent to the average of all possible split-half reliability estimates. Alpha is an appropriate index of internal consistency for use on untimed tests such as the MO EOC Assessments. Cronbach's alpha can be interpreted as a lower bound to reliability and can be estimated using the following formula:

$$\alpha = \frac{n}{n-1} \left[1 - \frac{\sum_{i=1}^n \sigma_{y_i}^2}{\sigma_x^2} \right],$$

where n is the number of items, $\sigma_{y_i}^2$ is the variance of item i , and σ_x^2 is the variance of the total score. Following this, *SEM* can be interpreted as "the square root of the average of the person-specific error variances of all examinees who participated in the reliability

estimation experiment” (Traub 1994, p. 114). *SEMs* were calculated using the following formula:

$$SEM = S_x \sqrt{1 - \alpha},$$

where S_x is the standard deviation (*SD*) of observed total scores. Separate analyses were performed for each EOC content area. Tables 10.1 to 10.25 show the reliability coefficients (Cronbach’s alpha) and *SEMs* based on the raw-score metric for the total population and for select student subgroups.

10.4 Conditional Standard Error Estimates for Scale Scores

The overall *SEM* in Tables 10.1 to 10.25 represents the *SD* of projected replications of the testing procedure averaged over all students. In contrast, conditional standard errors of measurement (*CSEMs*) are conditioned on the ability of the student. Rasch-based *CSEMs* ($CSEM(\theta)$) for each scale score are defined as the reciprocal of the square root of the test information function ($I(\theta)$) at the point on the ability continuum that corresponds to each scale score (Hambleton and Swaminathan 1985):

$$CSEM(\theta) = \frac{1}{\sqrt{I(\theta)}}.$$

CSEMs are especially useful for characterizing measurement precision in the neighborhood of score levels used for decision making, such as cut scores at various achievement levels. The *CSEMs* for the Proficient cut scores for the MO EOC Assessments are presented in Table 10.26. *CSEMs* for other scale scores are reported in Chapter 7 of this technical report. Note that *CSEMs* are smaller in the middle of the score distribution than at the extremes. This pattern is expected for item response theory (IRT)-based *CSEMs*. The value for all *CSEMs* was between 7 and 9 scale-score points..

* See Tables 7.48 through 7.62 in Chapter 7 for the *CSEM* at each scale score.

10.5 Reliability of Classifications

The reliability of student achievement-level classifications (i.e., Below Basic, Basic, Proficient, and Advanced) was evaluated using a computer program developed by Huynh

(1979). This FORTRAN program is based on the beta-binomial model that also provides standard errors (*SEs*) for the consistency estimates. Classification consistency refers to the degree to which each student's achievement level can be replicated and is similar to the traditional test-retest or equivalent forms reliability. Using the maximum possible score, mean, *SD*, and KR-21 reliability estimate, the program computes parameters (α , β) for the beta-binomial distribution. Kappa indices, which estimate the level of improvement in decision consistency beyond chance when test data are used, are then computed (Huynh 1979).

Tables 10.27 and 10.28 show the results of the classification and decision consistency analyses for the operational test administrations for the five MO EOC Assessments. As noted above, the raw agreement index is a classification consistency index that estimates the percentage of examinees who would (hypothetically) be assigned to the same achievement level if the same test was administered a second time or an equivalent test was administered under the same conditions. The agreement consistency indices (*p*) for the EOC Assessments were generally in the low to mid 60s. These values reflect classification agreement consistency for the four performance categories: Below Basic, Basic, Proficient, and Advanced. Had a student been regarded as "pass" if his or her achievement level was Proficient or Advanced and as "fail" if his or her achievement level was Below Basic or Basic, the agreement consistency indices would have been 15 to 20 percent higher, as indicated in Tables 10.29 and 10.30.

CHAPTER 11: VALIDITY

11.1 Introduction

According to the Standards (AERA, APA, and NCME 1999), “Ultimately, the validity of an intended interpretation of test scores relies on all the available evidence relevant to the technical quality of a testing program. This includes evidence of careful test construction; adequate score reliability; appropriate test administration and scoring; accurate score scaling, equating, and standard setting; and careful attention to fairness for all examinees” (p. 17). While this chapter summarizes evidence that supports claims about the validity of Missouri End-of-Course (MO EOC) Assessment scores, many other parts of this technical report also provide appropriate evidence for validity. Some of this evidence is cross-referenced below for added convenience. The procedural and empirical evidence available, along with the rationale presented below, provides support for the standards-based interpretations of the MO EOC Assessments.

This chapter begins with a brief review of important federal statutes related to the the Phase II MO EOC Assessments and explains the purposes and intended uses of test scores, suggesting the value implications of these assessments for schools, teachers, students, and parents. Validity evidence related to test content is presented in terms of the adequacy and appropriateness of the EOC Assessments for measuring progress on the Missouri content standards. Then, validity evidence based on the internal structure of the MO EOC Assessments is provided through a correlational analysis of MO EOC Assessment content clusters. References to specific standards are provided where appropriate.

11.2 Purpose and Intended Uses of Test Scores

The *Standards* state that “Validation logically begins with an explicit statement of the proposed interpretation of the test scores, along with a rationale for the relevance of the interpretation to the proposed use” (AERA, APA, and NCME 1999).⁹ The MO EOC Assessments were developed for the following purposes and uses:

- Measuring and reflecting students’ mastery toward post-secondary readiness
- Identifying students’ strengths and weaknesses
- Communicating expectations for all students
- Serving as the basis for state and national accountability plans
- Evaluating programs

The valid interpretation and appropriate use of MO EOC Assessment scores are supported in a variety of ways, including the training and consultation provided by personnel of the Missouri Department of Elementary and Secondary Education (DESE) and publications such as the *Test Examiner’s Manual*, *Guide to Interpreting Results*, and this technical report. The training and documentation provided to test users help them better administer, understand, and use test score results.

⁹ **Standard 1.2:** The test developer should set forth clearly how test scores are intended to be interpreted and used. The population(s) for which a test is appropriate should be clearly delimited, and the construct that the test is intended to assess should be clearly described (p. 17).

11.3 MO EOC Assessment Scores

The MO EOC Assessment scores are scaled in several ways: raw-score points, item response theory (IRT)-derived scale scores, and achievement level (based on scale-score cuts). Missouri actively promotes the use of achievement-level results, reporting them annually on each assessment at the student, school, district, and state levels. Individual student and average scale scores are also used, but they play a secondary role and are generally interpreted with reference to their distance from achievement-level cut points. Test results are reported for students as a whole as well as by student group, including gender, ethnicity, migrant status, free and reduced lunch (FRL) status, English language proficiency, Title I, Individualized Education Program (IEP) status, and accommodations used during testing. Scores are reported to schools and districts in annually published reports (for more information, see Chapter 8: Reporting).

The MO EOC Assessment score indicates that an individual student performs at the Below Basic, Basic, Proficient, or Advanced level in a given content area. Achievement-level descriptors provide details about the content expectations that students at each level meet or exceed. No stakes for teachers are attached to student-level scores by the state. Teachers are counseled to interpret individual student scores only in the context of other assessment results and their own experience.

11.4 Content-Related Evidence of Validity

Baker and Linn (2002) suggest that “Two questions are central in the evaluation of content aspects of validity. Is the definition of the content domain to be assessed adequate and appropriate? Does the test provide an adequate representation of the content domain the test is intended to measure?” (p. 6). The following sections help answer these two very important questions and also address Standard 1.6¹⁰ of the Standards (AERA, APA, and NCME 1999), which specifically relates to the definition and development of test content.

11.4.1 *Appropriateness of Content Definition*

In 1993, the Missouri legislature passed the Outstanding Schools Act (Senate Bill 380), requiring the Missouri State Board of Education to adopt challenging academic performance standards that define the skills and competencies necessary for students to successfully advance through the public school system, prepare for post-secondary education and the workplace, and participate as citizens in a democratic society. The State Board of Education formally adopted the academic standards known as the Show-Me Standards in January 1996.

In addition to mandating the development of rigorous academic standards, the Outstanding Schools Act of 1993 required the development and implementation of a comprehensive, primarily performance-based assessment program to measure student

¹⁰ **Standard 1.6:** When the validation rests in part on the appropriateness of test content, the procedures followed in specifying and generating test content should be described and justified in reference to the construct the test is intended to measure or the domain it is intended to represent. If the definition of the content sampled incorporates criteria such as importance, frequency, or criticality, these criteria should also be clearly explained and justified (p. 18).

proficiency in the knowledge, skills, and competencies identified in the standards. Upon adoption of the standards in 1996, Missouri began developing the Missouri Assessment Program (MAP).

In January 2007, the Missouri State Board of Education approved a plan to replace the MAP for high school students, beginning in August of the 2008–2009 school year, with EOC Assessments in English II, Algebra I, and Biology. The remaining EOC Assessments (English I, Algebra II, Geometry, Government, and American History) were added the following year. The intent was to provide MO EOC Assessments that are an integral part of the statewide assessment system and, as such, are a logical extension of MAP tests at the elementary and middle school grade levels.

11.4.2 Adequacy of Content Representation

Adequacy of the content representation of the MO EOC Assessments is critically important because the tests must provide an indication of student progress toward achieving the knowledge and skills identified in the Missouri Course-Level Expectations (CLEs).

Adequate representation of the content domains defined in the CLEs is assured through the use of a test blueprint and a carefully documented test construction process. CLEs and the Show-Me Standards for the Phase II Assessments are taken into consideration in the writing of selected response (SR) items. Each assessment must align with and proportionally represent the subdomains of the test blueprint. Evidence to support the content validity of the MO EOC Assessments was provided in Chapter 2: Test Development through the documentation of the test specifications and blueprints, item-writing processes, and item-review processes.

Additional evidence to support the content validity of the MO EOC Assessments was provided in Tables 2.1 through 2.7 in Chapter 2: Test Development and also in Chapter 4: Item Analysis. Chapter 2 outlined the target strand and CLE point distributions on the English I, Algebra II, Geometry, Government, and American History operational forms. All forms administered in 2010–2011 met the point ranges specified in the blueprints. In addition, Riverside Publishing strove to equitably represent the strands on each assessment by balancing CLE and sub-CLE coverage according to the targets outlined in the test specifications.

11.5 Validity Evidence Based on the Internal Structure of the MO EOC Assessments

Standard 1.11¹¹ pertains to the relationships between the parts of the test. Because the MO EOC Assessments measure student performance in several content areas, it is important to study the pattern of relationships among the content domains and clusters. One way to study patterns of relationships to provide evidence supporting the inferences made from test scores is the multitrait, multimethod matrix. Tables 11.1 through 11.3 summarize Pearson correlation coefficients among test domains and clusters for Algebra II, Geometry, and Government. Because both English I and American History have only

¹¹ **Standard 1.11:** If the rationale for a test use or interpretation depends on premises about the relationships among parts of the test, evidence concerning the internal structure of the test should be provided (p. 20).

one content cluster, correlation coefficients were not calculated for these EOC Assessments. The correlations between clusters within each assessment are in the moderate to moderately high range, suggesting strong relationships between the clusters. Note that the high correlations between cluster scores and total assessment scores are inflated due to the overlap of items.

Table 11.1: Pearson Correlation Coefficients Between Domains and Clusters for Algebra II

Spring 2011	Government Knowledge of principles and processes of governance systems	0.93	0.94
	Knowledge of the principles expressed in documents shaping constitutional democracy in the United States		0.75

11.6 Discriminant Validity Evidence for the MO EOC Assessments

The Standards for Educational and Psychological Testing (1999) states the following regarding convergent and divergent validity: “Relationships between test scores and other measures intended to assess similar constructs provide convergent evidence, whereas relationships between test scores and measures purportedly of different constructs provide discriminant evidence.” (pg. 14). The Missouri End-of Course assessments were designed to measure different constructs as shown by both the standards they assess and the content coverage detailed in the test blueprints.

The data presented below show evidence of divergent validity for Phase II content areas using scale scores. The data sets used for the analysis were drawn from the Spring 2011 operational test administration. The students in the data sets were merged using Missouri’s unique student identification number. Any student who took at least two of the five operational tests was included in the correlations. Table 11.4 shows the Pearson correlation coefficients between scale scores and the N count for each correlation.

Table 11.4 Pearson Correlation Coefficients Between Phase II Assessments

	English I	Algebra II	Geometry	Government	History
English I	—	0.491 (N=1303)	0.481 (N=5434)	0.704 (N=6095)	0.656 (N=13526)
Algebra II		—	0.736 (N=1294)	0.525 (N=4620)	0.499 (N=6274)
Geometry			—	0.572 (N=4321)	0.539 (N=6171)
Government				—	0.763 (N=787)
History					—

The results shown in Table 11.4 contain evidence of divergent validity. Evidence of divergent validity is supported by the lower correlations between content areas that measure dissimilar constructs as compared to content areas that assess similar constructs. For example, the correlations between the similar constructs of Algebra II and Geometry (0.736), and Government and History (0.763) are higher than the correlations between the dissimilar constructs of English I and Algebra II (0.491).

For English I and Government, challenging language and grammar on both tests could account for the higher correlation value. These correlation values are still lower than the tests measuring a similar construct and are in the range of the correlations among high school MAP subject area tests (the precursor to MAP End-of-Course assessments) as reported in the *Missouri Assessment Program Technical Report, 2008* (Missouri Department of Elementary and Secondary Education, 2008).

Table 11.5 provides more evidence of discriminant validity with correlations between Phase I and Phase II subjects. Evidence of discriminant validity is seen when comparing correlations between the similar contents of Algebra I and Geometry (0.709), Algebra I and Algebra II (0.770), English I and English II (0.681) and the dissimilar contents of

Algebra I and English I (0.532), Algebra II and English II (0.535) and Geometry and English II (0.536).

Table 11.5 Pearson Correlation Coefficients Between Phase I and Phase II Assessments

	English I	Algebra II	Geometry	Government	History
English II	0.681 (N=420)	0.535 (N=8154)	0.536 (N=13562)	0.725 (N=8212)	0.656 (N=7270)
Algebra I	0.532 (N=20349)	0.770 (N=152)	0.709 (N=379)	0.618 (N=8558)	0.512 (N=9406)
Biology	0.676 (N=7137)	0.605 (N=8105)	0.588 (N=11086)	0.743 (N=7890)	0.675 (N=8640)

11.7 Additional Validity Evidence for the MO EOC Assessments

Validity evidence related to other standards is described below.

Standard 1.5¹² relates to the characteristics of the sample of examinees from which validity evidence is inferred. The sample of examinees from which the validity evidence for the MO EOC Assessments was obtained is described in detail in Chapter 9: Summary Statistics, which includes tables with descriptive statistics for raw-score, scale-score, and achievement-level distributions. Statistics include *n*-counts, means, standard deviations (*SDs*), minimum and maximum values, and a variety of data disaggregations.

Standard 1.7¹³ relates to human judgment at various points in the test development, scoring, and reporting process. For the MO EOC Assessments, human judgment was especially prevalent during the standard-setting process. Chapter 3: Achievement-Level Setting contains detailed information about the standard-setting procedures used for the MO EOC Assessments, including the selection process for and characteristics of the standard-setting participants.

Standard 1.13¹⁴ relates to the conditions under which the data used to support validity claims were collected. Chapter 5: Test Administration contains information about how data were gathered in both the online and paper-and-pencil administrations, including the

¹² **Standard 1.5:** The composition of any sample of examinees from which validity evidence is obtained should be described in as much detail as is practical, including major relevant sociodemographic and developmental characteristics (p. 18).

¹³ **Standard 1.7:** When a validation rests in part on the opinions or decisions of expert judges, observers, or raters, procedures for selecting such experts and for eliciting judgments or ratings should be fully described. The qualifications, and experience, of the judges should be presented. The description of procedures should include any training and instructions provided, should indicate whether participants reached their decisions independently, and should report the level of agreement reached. If participants interacted with one another or exchanged information, the procedures through which they may have influenced one another should be set forth (p. 19).

¹⁴ **Standard 1.13:** When validity evidence includes statistical analyses of test results, either alone or together with data on other variables, the conditions under which the data were collected should be described in enough detail that users can judge the relevance of the statistical findings to local conditions. Attention should be drawn to any features of a validation data collection that are likely to differ from typical operational testing conditions and that could plausibly influence test performance (p. 20).

testing environment, materials distribution and security, Test Examiner training, student preparation, and allowable accommodations.

11.8 Summary

Validity is not an all-or-nothing property of a test; rather, validity evidence must be documented for a specific purpose and in the context of how the test scores will be interpreted and used. Much of the information contained in this technical report is, in and of itself, documentation of the validity of the MO EOC Assessments for their stated purpose. This chapter provides a summary of the evidence presented elsewhere in the manual and provides some additional types of validity evidence relevant to the content and internal structure of the assessments.

The overall technical quality of the EOC Assessments was sound. The Spring 2009 standalone field tests produced pools of technically sound items, with more than a 90% retention rate after psychometric and content criteria were applied. From those pools, Riverside Publishing was able to assemble forms that were psychometrically very similar and that similarity helped support the pre-equating model that is in place. Application of IRT pre-equating resulted in perfect or nearly congruent raw-to-scale score conversions between the Spring (base) and Fall forms at the proficiency level cuts.

Post-administration test analyses supported the technical quality of the MO EOC Assessments. Evaluations of IRT model assumptions supported the use of the Rasch model for all tests. Test reliabilities ranged from 0.71 to 0.90 across the content areas for the Summer 2010, Fall 2010, and Spring 2011 forms. Conditional standard errors of measurement (*CSEMs*) were between 6 and 9 scale score points at the cut scores. The item analyses also showed that the MO EOC Assessments have sound psychometrics properties. The *p*-value ranges were sufficiently broad to indicate that the items do measure achievement across a broad range of difficulty. Nearly all items had discrimination values > 0.15 , and 36 items had a value < 0.10 . Speededness was not a factor in students' test performance. Item bias analyses conducted on the pools further indicated that items were functioning equivalently for gender and ethnic groups.

APPENDIX B:
NOMINATION LETTERS

Missouri Department of Elementary and Secondary Education

— Making a positive difference through education and service —

July 31, 2009

Dear School Administrator,

In 2009-2010, Missouri students will have the opportunity to take the second phase of End-of-Course (EOC) assessments, including tests in Algebra II, Geometry, Integrated Mathematics II and III, English I, American History, and Government. Just as we determined achievement levels for the first phase EOC assessments (Algebra I, English II, and Biology) about a year ago, we will need to define student performance on these EOC assessments as Below Basic, Basic, Proficient or Advanced.

To accomplish this important task, we will conduct an Achievement Level Setting Conference with the assistance of our contractors for EOC assessment development, Riverside Publishing and Questar Assessment. This conference will provide an opportunity for panels of educators and other individuals to discuss course-level expectations for each applicable course and to review assessment items to determine the appropriate “cut scores” for each achievement level. The composition of the achievement level setting panels and the expertise of panelists are critically important to this process. The panel for each EOC assessment will consist of 15-18 members. Within each panel, a minimum of 50 percent of the panelists will be classroom teachers. At least half of the remaining panelists will be non-teacher educators (administrators, curriculum specialists, etc.) with knowledge of the appropriate content area. Each panel will also include non-school employees (parents, business professionals, etc.) with expertise in the appropriate content area. Because you have the opportunity to work with excellent educators, as well as members of your community, we are asking for your input in assembling achievement level setting panels that are knowledgeable and reflective of Missouri’s diverse population.

Forms for you to nominate classroom teachers, non-teacher educators and business professionals to serve on EOC achievement level setting panels, along with guidelines for panelist nomination, are posted on the DESE website at <http://www.dese.mo.gov/divimprove/assess/>. These nominations will be placed into a large pool from which we will select final panelists. Selected panelists will be representative of the state’s demographic characteristics and geographic make-up. **The EOC Achievement Level Setting Conference will be held on November 2-5, 2009.** Panels for English I, American History, and Integrated Mathematics II and III (combined panel) will meet on **November 2nd and 3rd**; panels for Government, Geometry, and Algebra II will meet on **November 4th and 5th**. Specific location for the conference has not yet been determined, but it will be held in mid-Missouri.

Missouri Department of Elementary and Secondary Education

— Making a positive difference through education and service —

If you are interested in nominating an individual(s) to serve as a panelist, please complete the appropriate form(s) according to the specified guidelines and return it to the Curriculum and Assessment Section by e-mail, mail or fax. **Nomination forms must be postmarked, faxed, or e-mailed on or before September 1, 2009, to be considered for panel selection. Return address and fax number are printed on the forms.**

Prior to submitting nominations, please contact any individual you wish to nominate to ensure his/her interest and availability if selected to participate as a panelist. It is very important that panelists are available for both days of the conference for their content area. All participants will be reimbursed for travel expenses and meals not provided during the conference. Additionally, those panelists that are not otherwise being compensated (by their employer, school district, etc.) will receive a stipend of \$100 for each full day of work. For teachers that are on contract (and, therefore not requesting a stipend) school districts will be reimbursed for the cost of substitutes. We will notify all potential panelists of the status of their nomination in early October. Those nominees selected to participate in the Achievement Level Setting Conference will receive further information about the conference at that time. Thank you for your assistance in this important endeavor. Please feel free to contact the Curriculum and Assessment Section at 573-751-2625 if you have any questions.

Sincerely,

A handwritten signature in cursive script that reads "Stan Johnson".

Stan Johnson, Assistant Commissioner
Division of School Improvement

July 31, 2009

TO: RPDC Directors
FROM: Michael Muenks, Coordinator, Curriculum and Assessment
RE: End-of-Course Assessment Achievement Level Setting

In 2009-10, Missouri students will have the opportunity to take End-of-Course (EOC) assessments in Geometry, Algebra II, Integrated Mathematics II and III, [English II](#), American History, and Government (Phase II EOC tests). From November 2-5, DESE's Assessment Section will conduct an achievement level setting conference with the assistance of Riverside Publishing and Questar Assessment to determine the scores that will be used to define student performance as Below Basic, Basic, Proficient or Advanced. Panels for English I, American History, and Integrated Mathematics II and III (combined panel) will meet on November 2nd and 3rd; panels for Geometry, Algebra II, and Government will meet on November 4th and 5th. Specific location for the conference has not yet been determined, but it will be held in mid-Missouri.

This conference will provide an opportunity for panels of educators and other individuals to discuss course-level expectations for each applicable course and to review assessment items to determine the appropriate "cut scores" for each achievement level. The composition of the achievement level setting panels and the expertise of panelists are critically important to this process. We anticipate including at least two post-secondary education representatives on each panel.

I am requesting your assistance in identifying teacher educators or other post-secondary educators that have expertise in the appropriate course content to serve as panelists. Nomination guidelines and forms are posted on the DESE website at <http://www.dese.mo.gov/divimprove/assess/>. If you would like to nominate an individual to serve as a panelist, please return the completed nomination form to the Curriculum and Assessment Section by e-mail, mail or fax no later than September 1, 2009 (mailing address and fax number are printed on the form).

Prior to submitting nominations, please contact any individual you wish to nominate to ensure his/her interest and availability if selected to participate as a panelist. It is very important that panelists are available for both days on which their panel will meet. All participants will be reimbursed for travel expenses and meals not provided during the conference. Additionally, those panelists that are not otherwise being compensated by their employer will receive a stipend of \$100 for each full day of work. We will notify

all panelists of the status of their nomination in early October. Those nominees selected to participate in the Achievement Level Setting Conference will receive further information about the conference at that time.

Feel free to contact the Curriculum and Assessment Section at 573-751-2625 or e-mail map@dese.mo.gov if you have any questions.

APPENDIX D:
PANELIST QUALIFICATION GUIDELINES

**GUIDELINES FOR PANELIST NOMINATION
PHASE II END-OF-COURSE ASSESSMENT ACHIEVEMENT LEVEL SETTING**

Qualifications of Classroom Teachers:

- Must have taught the course for which they are being nominated to serve as a panelist for a minimum of five years.
- Should be familiar with the Show-Me Standards and the applicable Course-Level Expectations.
- Should be recognized as “outstanding” in professional performance.

Qualifications of Non-Teacher Educators and Post-Secondary Educators:

- May be a non-teacher educational staff member in a building or district central office, or an instructor or administrator at a post-secondary institution.
- Must have familiarity with the course content for which they are being nominated to serve as a panelist.
- Should be familiar with the Show-Me Standards and applicable Course-Level Expectations.
- Must be recognized as “outstanding” in professional performance by the individual making the nomination.

Qualifications of Business Professionals:

- Must have familiarity with the content of the course for which they are being nominated to serve as a panelist (Algebra II, Geometry, Integrated Mathematics II and III, English I, American History, or Government).
- Should either:
 - use high school course content for the applicable content area in their daily professional work
 - OR be familiar with the knowledge and skills that high school students completing the applicable courses must possess to have a firm foundation for further coursework or for the workplace.
- Should not be a current or former employee of the public school system.

General Information to Share with Nominees:

- It is imperative that panelists participate fully in all conference activities. **Before making a nomination, please verify that any individual you nominate is all available for ALL applicable conference dates (November 2-3 for English I, American History, and Integrated Mathematics II and III; November 4-5 for Algebra II, Geometry, and Government).**
- A total of 15-18 panelists per End-of-Course assessment will be selected from the pool of nominations. A minimum of half of the members of each panel will be classroom teachers. At least half of the remaining panelists will be non-teacher educators. Each panel will also include members of the business/professional community.
- All nominees will receive notice of the status of their nomination in early October.
- Selected panelists will receive a stipend of \$100 per day for their work if they are not otherwise being compensated by their employer. (Classroom teachers may request a stipend if not on contract with their school district on meeting days.) Participants will be reimbursed for mileage at the State’s approved rate, lodging, and meals not provided during the conference.

Making a Nomination:

- Download and complete the correct nomination form for each individual(s) you wish to nominate:
 - Classroom Teacher Nomination
 - Non-Teacher Educator Nomination
 - Business/Professional Nomination
- Make sure the form is completed fully and accurately. Incomplete forms will not be placed in the pool for consideration. Please verify all information on each form prior to submitting nominations.
- Mail, e-mail or fax the nomination form(s) to DESE on or before September 18, 2009. Forms postmarked, e-mailed or faxed after September 18, 2009, will NOT be accepted.

PLEASE CONTACT THE CURRICULUM AND ASSESSMENT SECTION AT 573-751-2625 OR E-MAIL sara.hagenhoff@dese.mo.gov IF YOU HAVE FURTHER QUESTIONS ABOUT COMPLETING NOMINATION FORMS.

APPENDIX F:
PARTICIPANT AGENDAS

MISSOURI EOC STANDARD SETTING

November 2–3, 2009 English I & American History

Participant Agenda

Day 1—Morning

7:45 AM: Participants Arrive for Registration and Breakfast

- Welcome, Introductions, Logistics(DESE staff)
(Large-Group session—all panels together)
- Overview of MO EOC Assessment System(DESE)
- Overview of the two days of sessions (Mike Beck [Questar])
- Intro. to Achievement-Level Descriptors (ALDs) (Sheila Potter [Questar])

(Panelists now break into 3 individual groups, separately facilitated; all subsequent panel work will take place in the separate sessions.)

- Setting Performance Standards—General Process
- “Experience” the Assessments

12:00 PM: Lunch

Day 1—Afternoon

- Definitions and Description of Performance Standards
- Orientation to the Specific Standard-Setting Methodology
- Preparation for Round 1 of Judgments
- First Round of Judges’ Work (until completed)

5:30 PM: Participants Excused

Day 2—Morning

7:45 AM: Participants Arrive for Registration and Breakfast

- Review of Day 1 Activities and Discussions
- Feedback & Discussion of Round 1 Judgments
- Preparation for Round 2 Judgments (until completed)
- Round 2 of Judges’ Work

12:00 PM: Lunch

Day 2—Afternoon

- Review of Round 2 Judgments
- Preparation for Final Judgments
- Final Round of Judgments & Evaluation (until completed)
- Final review of ALDs & Session [Wrapup](#)

4:45 PM: Participants Excused

MISSOURI EOC STANDARD SETTING

November 4–5, 2009: Algebra II, Geometry, & Government

Participant Agenda

Day 1—Morning

7:45 AM: Participants Arrive for Registration and Breakfast

- Welcome, Introductions, Logistics(DESE staff)
(Large-Group session—all panels together)
- Overview of MO EOC Assessment System(DESE)
- Overview of the two days of sessions (Mike Beck [Questar])
- Intro. to Achievement-Level Descriptors (ALDs) (Sheila Potter [Questar])

(Panelists now break into 3 individual groups, separately facilitated; all subsequent panel work will take place in the separate sessions.)

- Setting Performance Standards—General Process
- “Experience” the Assessments

12:00 PM: Lunch

Day 1—Afternoon

- Definitions and Description of Performance Standards
- Orientation to the Specific Standard-Setting Methodology
- Preparation for Round 1 of Judgments
- First Round of Judges’ Work (until completed)

5:30 PM: Participants Excused

Day 2—Morning

7:45 AM: Participants Arrive for Registration and Breakfast

- Review of Day 1 Activities and Discussions
- Feedback & Discussion of Round 1 Judgments
- Preparation for Round 2 Judgments (until completed)
- Round 2 of Judges’ Work

12:00 PM: Lunch

Day 2—Afternoon

- Review of Round 2 Judgments
- Preparation for Final Judgments
- Final Round of Judgments & Evaluation (until completed)
- Final review of ALDs & Session [Wrapup](#)

4:45 PM: Participants Excused

APPENDIX G

OPENING SESSION POWERPOINT PRESENTATION

Setting the Standard

Achievement Level-Setting Conference Missouri End-of-Course Assessments

English I, American History – November 2-3, 2009
Algebra II, Geometry, Government – November 4-5, 2009

Statewide Assessment in Missouri - A Brief History

- Missouri S.B. 380 – The Outstanding Schools Act
 - Passed in 1993
 - Required development of academic performance standards
 - Mandated statewide assessments to measure student progress toward standards
- The Missouri Assessment Program (MAP)
 - Designed to evaluate student performance relative to Show-Me Standards
 - First administration in 1996 (began with grade span Mathematics test)
 - Developed over the next decade to include assessments in multiple grades and content areas

No Child Left Behind (NCLB)

- Federal legislation passed in 2001
- By 2005-2006, states required to assess students in Mathematics and Communication Arts in all grades 3-8 and once in high school
- Science added in 2007 – States required to assess once in each grade range (elementary, middle, and high school)
- Goal is to have all students reach "Proficiency" by 2014
- States create unique definitions of "Proficiency"

Impact of NCLB on MAP

- Added grade-level assessments for grades 3-8 and 10 in Mathematics and grades 3-8 and 11 in Communication Arts in Spring 2006
- Added Science assessments for grades 5, 8, and 11 in Spring 2007
- Established achievement levels of Below Basic, Basic, Proficient, and Advanced for all MAP-assessed grade levels and content areas

Missouri End-of-Course (EOC) Assessments

- New approach to high school assessment in Missouri
- Recommended by Missouri State Board of Education and task force on high school assessment
- Designed to be administered when students complete specific course content rather than at the end of a grade level

Purposes of Missouri EOC Assessments

- According to the Missouri State Board of Education, Missouri EOC Assessments are intended to:
 - measure and reflect student mastery toward post secondary readiness
 - identify students' strengths and weaknesses
 - communicate expectations for all students to patrons and community
 - serve as the basis of state and national accountability plans
 - evaluate programs

Missouri EOC Assessment Development

- Phase I – Algebra I, English II, Biology
 - Implemented in 2008-2009
 - Replaced high school MAP assessments in Mathematics, Communication Arts, and Science
- Phase II – Algebra II, Geometry, English I, American History, Government
 - Implemented in 2009-2010

About Missouri EOC Assessments...

- Phase I EOC Assessments include both multiple choice items and performance items and are designed to be administered in two 55-minute class periods
- Phase II EOC Assessments include multiple choice items only and can be administered in one 55-minute class period.
- Flexible administration – Districts can administer during fall, spring, or summer window.
- Can contribute to course grades (local decision)
- Provide data for state and federal accountability

Achievement Level-Setting for Phase II Missouri EOC Assessments

- What is the task?
 - To determine what score on a Missouri EOC Assessment separates "Below Basic" from "Basic" performance, "Basic" from "Proficient" performance, and "Proficient" from "Advanced" performance
 - To define what characteristics of student performance should be demonstrated at each performance level

Achievement Level-Setting for Phase II Missouri EOC Assessments

- Why is it important?
 - Defining achievement levels helps us answer the question, "How good is good enough?"
 - Achievement levels provide a common measure and a common vocabulary for educators, parents, and other stakeholders to talk about student performance.
 - Achievement levels provide us with a way of looking at student performance and progress over time.

Achievement Level-Setting for Phase II Missouri EOC Assessments

- Who is involved?
 - Approximately 15 panelists per Missouri EOC Assessment
 - Panels include classroom teachers (at least 50 percent), non-teacher educators, representatives of postsecondary education, and other professionals
 - Panelists nominated by building and district administrators, professional educator organizations, and postsecondary education community
 - Panels selected to be geographically and demographically representative of Missouri's population

Achievement Level-Setting for Phase II Missouri EOC Assessments

- Roles and responsibilities
 - Riverside Publishing Company (Missouri's contractor for EOC Assessments) – Overseeing achievement level-setting process and providing onsite data
 - Questar Assessment (Riverside Publishing Company's subcontractor for achievement level setting) – Training and facilitating in large and small group sessions
 - DESE Curriculum and Assessment staff – Available to answer questions about test development and content, and conference logistics
 - Regional Instructional Facilitators – Present in each room during small group sessions to serve as content resources
 - Panelists – Evaluate test content and data to recommend cut scores and to revise achievement level descriptors

Achievement Level-Setting for Phase II Missouri EOC Assessments

- The Achievement Level-Setting Process
 - Modified Angoff method as recommended by Missouri's TAC
 - Training in large and small groups
 - Review of test items and content
 - Rounds of judgments of cutscores for each achievement level
 - Consideration of 2008-2009 field test data
 - Review and revision of achievement level descriptors

Achievement Level-Setting for Phase II Missouri EOC Assessments

- Results:
 - Recommended cut scores for each Phase II Missouri EOC Assessment
 - Recommended achievement level descriptors for each Phase II Missouri EOC Assessment

Final Determination of Achievement Levels for Phase II Missouri EOC Assessments

Recommended cutscores and achievement level descriptors will be presented to the Missouri State Board of Education in January, 2010.

Standard Setting Overview

Missouri End-of-Course (EOC) Assessments

November, 2009

1

Session Overview - Day 1

- I. What is "standard setting" - in general and for the EOC Assessments?
- II. Describe the performance categories; refine achievement-level descriptors.
- III. Review and discuss the actual EOC test.
- IV. The "Angoff procedure" – how it works; "Practice" and "Warm-up"
- V. Round 1 of Recommendations

2

Setting Performance Standards

- *Who's Involved?* State and contractor roles
- *Why Questar?* Who's facilitating? Our role:
Not content experts, but facilitators

3

Setting Performance Standards

- *Who's Involved?* State and contractor roles
- *Why Questar?* Who's facilitating? Our role
- *Why you?* Individually and collectively:

You are the *experts*.
You *represent* various audiences.

4

Setting Performance Standards

- *Who's Involved?* State and contractor roles
- *Why Questar?* Who's facilitating? Our role
- *Why you?* Individually and collectively:

You are the *experts*.
You *represent* various audiences.
You are *judges*, not psychometricians.

5

Setting Performance Standards

- *Who's Involved?* State and contractor roles
- *Why Questar?* Who's facilitating? Our role
- *Why you?* Individually and collectively:

You are the *experts*.
You *represent* various audiences.
You are *judges*, not psychometricians.
You are *advisors*, not policy makers.

6

Groundrules

NO DISCUSSIONS about the *EOC* program or its underlying content standards

OR

7

Groundrules

NO DISCUSSIONS about the *EOC* program
OR

- why to set standards
- the philosophy of educational assessment
- why these particular tasks/assessments
- why a particular procedure is being used

8

Groundrules

NO DISCUSSIONS about the *EOC* program
OR

- why to set standards
- the philosophy of educational assessment
- why these particular tasks/assessments
- why a particular procedure is being used

Confidentiality - all materials & discussions.

9

Groundrules

NO DISCUSSIONS about the *EOC* program
OR

- why to set standards
- the philosophy of educational assessment
- why these particular tasks/assessments
- the fairness of assessing special students
- why a particular procedure is being used

Confidentiality of all materials & discussions

All discussions should be *as a group*.

Overarching Principle to Guide our Work

First expounded by, unarguably, the world's leading philosopher and intellectual

Dave Barry

11

Overarching Principle to Guide our Work

"If you had to identify, in one word, the reason why the human race has not achieved, and never will achieve, its full potential, that word would be . . . *meetings*."

12

What IS Standard Setting?

- another frame of reference to interpret test scores
 ("How good is *good*"?)
- a routine, daily activity

15

What IS Standard Setting?

- another frame of reference to interpret test scores ("How good is *good*"?)
- a routine, daily activity
- true "criterion-referencing"

16

What IS Standard Setting?

- another frame of reference to interpret test scores ("How good is *good*"?)
- a routine, daily activity
- true "criterion-referencing"
- a *semi*-quantitative, *semi*-standardized, socio-political judgment process

17

What IS Standard Setting?

- just a frame of reference for test scores
 - a routine, daily activity
 - true "criterion-referencing"
 - essentially, a judgment process
- NOT "science" !

18

4 Keys to Being a Great Judge

1. Judgments vs. Data

19

4 Keys to Being a Great Judge

1. Judgments vs. Data
2. "Should" vs. "Will"

20

4 Keys to Being a Great Judge

1. Judgments vs. Data
2. "Should" vs. "Will"
3. Consider *ALL Missouri* students who will take this EOC assessment.

»

4 Keys to Being a Great Judge

1. Judgments vs. Data
2. "Should" vs. "Will"
3. Consider *ALL Missouri* students who took this EOC assessment
4. Think of *threshold* students, not *all* who are Proficient.

»

Advice on Setting Standards

- Set demanding, but *attainable* standards.

»

Advice on Setting Standards

- Set demanding, but *attainable* standards.
- What "*should be*" probably shouldn't disregard what "*is*."

»

Advice on Setting Standards

- Set demanding, but *attainable* standards.
- What "*should be*" probably shouldn't disregard what "*is*."
- Focus on *concrete* behaviors, skills, responses.

»

Advice on Setting Standards

- Set demanding, but *attainable* standards.
- What "*should be*" probably shouldn't disregard what "*is*."
- Focus on *concrete* behaviors, skills, responses.
- Item difficulty resides in the answer choices, not the item "*stem*."

»

Who was the 7th President of the United States?

25

Who was the 7th President of the United States?

- A. Augie Busch
- B. Stan Musial
- C. Andrew Jackson
- D. Mark Twain
- E. George Washington Carver

26

Who was the 7th President of the United States?

- A. Abraham Lincoln
- B. Harry Truman
- C. Andrew Jackson
- D. Nellie Tayloe Ross
- E. George Bush

27

Who was the 7th President of the United States?

- A. Martin VanBuren
- B. John Quincy Adams
- C. Andrew Jackson
- D. James Monroe
- E. John F. Kennedy

28

Advice on Setting Standards

- Set demanding, but *attainable* standards.
- What “*should be*” shouldn’t disregard what “*is*.”
- Focus on the *concrete*.
- Remember to review the options for all items.

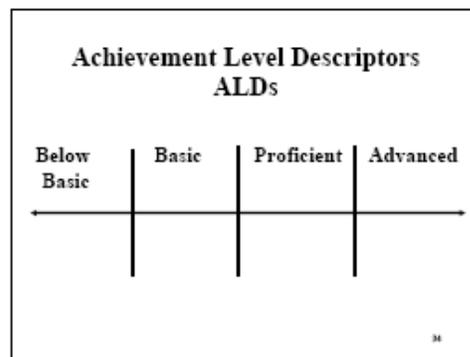

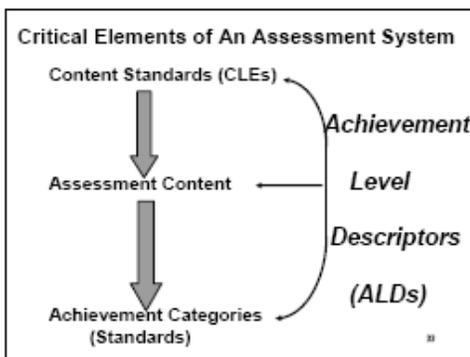

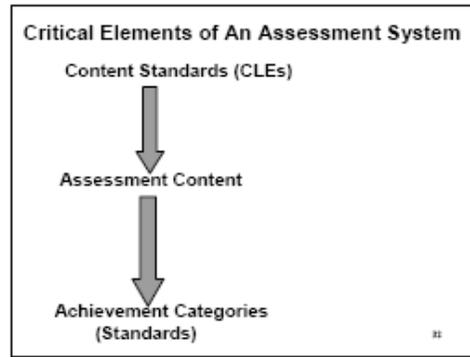

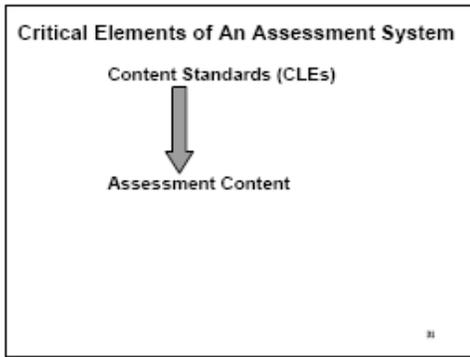

Use your best judgment !!

29

Critical Elements of An Assessment System

**Content Standards =
Course-Level Expectations
(CLEs)**

30

Achievement Level Descriptors (ALDs)

Written *draft* statements describing in content-specific terms the level of knowledge and skills required at each performance/achievement category – *Below Basic, Basic Proficient, Advanced*

15

Achievement Level Descriptors (ALDs)

Anchors for your decisions consisting of:

- Labels, i.e., BB, B, P, A
- Introductory paragraphs - general descriptions of Achievement Levels
- Lists of specific behaviors - what students should know and be able to do

16

**Achievement Level Descriptors
ALDs**

Why are they important?
Standard-setting ANCHORS
 for classifying student performance and determining cut scores.
 Reporting tools to help students, teachers, parents *interpret* what learners know and can do, and what they do not know and cannot do.

27

**Achievement Level Descriptors
ALDs**

- Are derived from the Course Level Expectations CLEs.
- Are based on *assessable* CLEs.
- Describe in general terms behaviors assessed specifically on the EOC assessments.

Not everything that can be counted counts, and not everything that counts can be counted.
 Albert Einstein

28

**Achievement Level Descriptors
ALDs – Your Task**

Determine what these *general* ALDs mean **concretely** for students taking each EOC assessment.

How??

29

**Achievement Level Descriptors
ALDs – Your Task**

- Beginning with the *Proficient* category, describe the assessed students *concretely*.
- What do they know? What can they do?
- What skills do they possess in order to demonstrate this behavior?
- What does the skill look like?
- What are examples?
- What behaviors/actions “fit” a certain category?

30

ALDs – Your Task

Advanced

- Demonstrate thorough understanding
- Demonstrate higher-level skills
- Use wide range of strategies to understand
- Consistently apply

Proficient

- Demonstrate understanding of skills and processes
- Use a range of strategies to understand and apply

Basic

- Demonstrate incomplete or partial understanding
- Demonstrate skills inconsistently
- Use some strategies

Below Basic

- Demonstrate little understanding
- Demonstrate skills inconsistently or incorrectly
- Use few strategies

31

**Achievement Level Descriptors
ALDs – Your Task**

- **Action verbs** - e.g., determine, evaluate, analyze, identify, compare, describe, explain
- **Qualifiers** - adjectives and adverbs that describe:
 - Differences in amount (most, various, few, both, limited)
 - Degree of
 - understanding (complex, clear, relevant, little, incomplete)
 - frequency (consistently, inconsistently, rarely)
 - effectiveness (highly, moderately, somewhat, thorough)

32

**Achievement Level Descriptors
ALDs – Your Task**

QUALITY & CLARITY

- High-quality, clear *anchors* for setting achievement standards
- High-quality, clear *targets* to assist teachers in
 - designing instruction and assessment
 - supporting acquisition of pre-requisite knowledge and skills
 - providing “on-target” intervention and practice
 - evaluating and grading

4

APPENDIX H:

DRAFT ALDs WITH PANEL EDITS MARKED

Missouri End-of-Course Assessment Achievement-Level Descriptors—DRAFT
English I
Achievement Levels

Advanced: Students performing at the Advanced level on the Missouri English I End-of-Course Assessment consistently demonstrate a thorough understanding of the skills and processes identified in the Course Level Reading Expectations for English I. They demonstrate higher-level skills in reading processes and in responding to both fiction and nonfiction texts. In addition to understanding and applying the skills at the Proficient level, students scoring at the Advanced level use a range of strategies to comprehend and interpret a variety of texts, demonstrate a thorough understanding of literary forms, and consistently apply different strategies for accessing and summarizing information.

Proficient: Students performing at the Proficient level on the Missouri English I End-of-Course Assessment demonstrate an understanding of the skills and processes identified in the Course Level Reading Expectations for English I. They demonstrate these skills in reading processes and in responding to both fiction and nonfiction texts. In addition to understanding and applying the skills at the Basic level, students scoring at the Proficient level use a range of strategies to comprehend and interpret a variety of texts, demonstrate an understanding of literary forms, and apply strategies for accessing and summarizing information.

Basic: Students performing at the Basic level on the Missouri English I End-of-Course Assessment demonstrate an incomplete understanding of the skills and processes identified in the Course Level Reading Expectations for English I. They demonstrate these skills inconsistently in reading processes and in responding to both fiction and nonfiction texts. In addition to understanding and applying the skills at the Below Basic level, students scoring at the Basic level use some strategies to comprehend and interpret a variety of texts, demonstrate a partial understanding of literary forms, and inconsistently apply few strategies for accessing and summarizing information.

Below Basic: Students performing at the Below Basic level on the Missouri English I End-of-Course Assessment demonstrate little understanding of the skills and processes identified in the Course Level Reading Expectations for English I. They demonstrate these skills inconsistently and/or incorrectly in reading processes and in responding to both fiction and nonfiction texts. Students scoring at the Below Basic level use few strategies to comprehend and interpret texts, demonstrate little understanding of literary forms, and apply few strategies for accessing information.

Achievement Descriptors

Advanced

Reading—In both fiction and nonfiction, a student can

- ✓ Determine vocabulary meaning
- ✓ Analyze the main idea and evaluate supporting details
- ✓ Make connections—compare, contrast, evaluate
- ✓ Evaluate text features
- ✓ Analyze and evaluate figurative language and literary techniques
- ✓ Draw insightful conclusions ~~to evaluate text~~
- ✓ Summarize and paraphrase complex ideas and information
- ✓ Evaluate literary elements
- ✓ Evaluate proposed solutions
- ✓ Evaluate accuracy and adequacy of evidence
- ✓ Analyze organizational patterns
- ✓ Evaluate the author’s point of view, viewpoint/perspective, and purpose
- ✓ Evaluate the author’s style and word choice

Proficient

Reading—In both fiction and nonfiction, a student can

- ✓ Determine vocabulary meaning
- ✓ Identify the main idea and supporting details
- ✓ Make connections—compare, contrast, analyze
- ✓ Analyze text features
- ✓ Analyze figurative language and literary techniques
- ✓ Draw accurate conclusions
- ✓ Summarize and paraphrase ideas and information
- ✓ Analyze literary elements
- ✓ Analyze proposed solutions
- ✓ Analyze accuracy and adequacy of evidence
- ✓ ~~Analyze~~ Explain organizational patterns

- ✓ Analyze the author’s point of view, viewpoint/perspective, and purpose
- ✓ Analyze the author’s style and word choice

Basic

Reading—In fiction and nonfiction, a student can

- ✓ Determine vocabulary meaning
- ✓ Identify the main idea and major details
- ✓ Make simple connections—compare, contrast
- ✓ Identify text features
- ✓ Identify figurative language and literary techniques
- ✓ Draw conclusions
- ✓ Summarize and paraphrase basic ideas and information
- ✓ Identify basic literary elements
- ✓ Identify proposed solutions
- ✓ Determine reliability of evidence
- ✓ Identify organizational patterns
- ✓ Identify author’s point of view and purpose
- ✓ Identify the author’s style and word choice

Below Basic

Reading—In fiction and nonfiction, a student can

- ✓ Determine vocabulary meaning
- ✓ Identify the main idea and some details
- ✓ Make simple connections
- ✓ Identify simple text features
- ✓ Identify figurative language
- ✓ Identify characters, plot, and setting
- ✓ Identify point of view
- ✓ Determine literal meaning

Missouri End-of-Course Assessment Achievement-Level Descriptors
Algebra II
Achievement Levels

Advanced: Students performing at the Advanced level on the Missouri Algebra II End-of-Course Assessment demonstrate a thorough understanding of the course-level expectations for Algebra II. They demonstrate these skills in numbers and operations, algebraic relationships, and data and probability. In addition to understanding and applying the skills at the Proficient level, students scoring at the Advanced level use a wide range of strategies to solve problems and demonstrate a thorough understanding of important mathematical content and concepts.

Proficient: Students performing at the Proficient level on the Missouri Algebra II End-of-Course Assessment demonstrate an understanding of most of the course-level expectations for Algebra II. They demonstrate these skills in numbers and operations, algebraic relationships, and data and probability. In addition to understanding and applying the skills at the Basic level, students scoring at the Proficient level use a range of strategies to solve problems and demonstrate an understanding of important mathematical content and concepts.

Basic: Students performing at the Basic level on the Missouri Algebra II End-of-Course Assessment demonstrate some understanding of the course-level expectations for Algebra II. They demonstrate these skills in numbers and operations, algebraic relationships, and data and probability. In addition to understanding and applying the skills at the Below Basic level, students scoring at the Basic level use some strategies to solve problems and demonstrate some understanding of important mathematical content and concepts.

Below Basic: Students performing at the Below Basic level on the Missouri Algebra II End-of-Course Assessment demonstrate a limited understanding of the course-level expectations for Algebra II. They demonstrate these skills in numbers and operations, algebraic relationships, and data and probability. In addition to demonstrating these skills, students scoring at the Below Basic level use very few strategies to solve problems and demonstrate a limited understanding of important mathematical content and concepts.

Achievement Descriptors

Advanced

Algebraic Relationships—Using algebraic relationships, a student can

- ✓ Describe the effect of parameter changes on logarithmic and rational functions
- ✓ Compare and contrast properties of rational functions
- ✓ Use symbolic algebra to represent and solve problems that involve logarithmic relationships
- ✓ Describe and use algebraic manipulations, inverse, or composition of functions
- ~~✓ Compare and contrast properties of rational functions~~
- ✓ Use and solve equivalent forms of logarithmic, radical, and rational equations
- ✓ Use and solve systems of quadratic equations or inequalities with 2 variables
- ✓ Identify quantitative relationships and determine type(s) of functions that might model the situation to solve a problem, including logarithmic and rational functions
- ✓ Analyze logarithmic functions by investigating intercepts, domain and range, and asymptotes

Data and Probability—Using data and probability, a student can

- ~~✓ Given one-variable quantitative data, describe its shape and calculate summary statistics~~
- ✓ Describe the concept of probability distribution
- ✓ Compute the probability of compound events

Proficient

Algebraic Relationships—Using algebraic relationships, a student can

- ✓ Compare and contrast various forms of representations of patterns
- ✓ Describe the effect of parameter changes on quadratic, cubic, absolute value, and square root functions
- ✓ Compare and contrast the properties of exponential and logarithmic functions
- ✓ Use symbolic algebra to represent and solve problems that involve exponential or quadratic relationships

- ✓ Describe and use algebraic manipulations, including factoring or imaginary numbers, to simplify expressions
- ✓ Use and solve equivalent forms of quadratic and exponential equations
- ✓ Use and solve systems of linear inequalities with two variables
- ✓ Identify quantitative relationships and determine type(s) of functions that might model the situation to solve a problem, including quadratic and exponential growth/decay
- ✓ Analyze exponential functions by investigating rates of change, intercepts, domain and range, and asymptotes
- ~~✓ Identify quantitative relationships that can be modeled by exponential or quadratic functions to solve a problem~~

Data and Probability—Using data and probability, a student can

- ✓ Given a scatterplot, determine a type of function that models the data
- ✓ Given one-variable quantitative data, calculate summary statistics
- ✓ Use and describe the concepts of conditional probability
- ~~✓ Given one-variable quantitative data, display the distribution and describe its shape~~
- ~~✓ Describe the concept of probability distribution~~
- ~~✓ Compute the probability of compound events~~

Basic

Numbers and Operations—Using numbers and operations, a student can

- ✓ Compare and order irrational numbers, including finding their approximate location on a number line
- ✓ Use real numbers and various models, drawings, etc. to solve problems

Algebraic Relationships—Using algebraic relationships, a student can

- ✓ Generalize patterns using explicitly or recursively defined linear or exponential functions
- ✓ Describe the effect of parameter changes on exponential functions
- ✓ Compare and contrast the properties of linear and exponential functions

- ~~✓ Describe the effect of parameter changes on exponential functions~~
- ~~✓ Describe and use algebraic manipulations, including rules of exponents, to simplify expressions~~
- ✓ Use symbolic algebra to represent and solve problems that involve linear relationships
- ✓ Describe and use algebraic manipulations, including rules of exponents, to simplify expressions
- ✓ Use and solve equivalent forms of absolute value and linear equations
- ✓ Use and solve systems of linear equations with two variables
- ✓ Identify quantitative relationships that can be modeled by linear functions to solve a problem

Data and Probability—Using data and probability, a student can

- ✓ Given a scatterplot, determine an equation for a line of best fit
- ✓ Given one-variable quantitative data, display the distribution and describe its shape
- ✓ Apply statistical measures of center to solve problems
- ~~✓ Given a scatterplot, determine an equation for a line of best fit~~
- ~~✓ Use and describe the concepts of conditional probability~~

Below Basic

Numbers and Operations—Using numbers and operations, a student can

- ✓ Compare and order rational numbers, including finding approximate locations on a number line

Algebraic Relationships—Using algebraic relationships, a student can

- ✓ Generalize patterns using explicitly or recursively defined single operation functions
- ✓ Describe the effects of parameter changes on linear functions
- ✓ Compare the properties of linear functions
- ✓ Describe and use algebraic manipulations, including order of operations, to simplify expressions

- ✓ Use and solve equivalent forms of linear equations

Data and Probability—Using data and probability, a student can

- ✓ Use appropriate graphical representations of data
- ✓ Describe the concept of sample space
- ✓ Determine the probability of two independent events

Missouri End-of-Course Assessment Achievement-Level Descriptors

Geometry

Achievement Levels

Advanced: Students performing at the Advanced level on the Missouri Geometry End-of-Course Assessment demonstrate a thorough understanding of the course-level expectations for Geometry. They demonstrate these skills in algebraic relationships, geometric and spatial relationships, and measurement. In addition to understanding and applying the skills at the Proficient level, students scoring at the Advanced level use a wide range of strategies to solve problems and demonstrate a thorough understanding of important mathematical content and concepts.

Proficient: Students performing at the Proficient level on the Missouri Geometry End-of-Course Assessment demonstrate an understanding of most of the course-level expectations for Geometry. They demonstrate these skills in algebraic relationships, geometric and spatial relationships, and measurement. In addition to understanding and applying the skills at the Basic level, students scoring at the Proficient level use a range of strategies to solve problems and demonstrate an understanding of important mathematical content and concepts.

Basic: Students performing at the Basic level on the Missouri Geometry End-of-Course Assessment demonstrate some understanding of the course-level expectations for Geometry. They demonstrate these skills in algebraic relationships, geometric and spatial relationships, and measurement. In addition to understanding and applying the skills at the Below Basic level, students scoring at the Basic level use some strategies to solve problems and demonstrate some understanding of important mathematical content and concepts.

Below Basic: Students performing at the Below Basic level on the Missouri Geometry End-of-Course Assessment demonstrate a limited understanding of the course-level expectations for Geometry. They demonstrate these skills in algebraic relationships, geometric and spatial relationships, and measurement. In addition to demonstrating these skills, students scoring at the Below Basic level use very few strategies to solve problems and demonstrate a limited understanding of important mathematical content and concepts.

Achievement Descriptors

Advanced

Algebraic Relationships—Using algebraic relationships, a student can

- ✓ Compare and contrast various forms of representations of patterns (exponential)

Geometric and Spatial Relationships—Using geometric and spatial relationships, a student can

- ✓ Use inductive and deductive reasoning to prove theorems and critique arguments made by others
- ✓ Make conjectures involving 2-dimensional objects represented with Cartesian coordinates
- ✓ Apply constructions and the coordinate plane to represent translations, reflections, rotations, and dilations of objects
- ~~✓ Identify types of symmetries of 3-dimensional figures~~
- ✓ Draw vertex-edge graphs or networks to find optimal solutions
- ✓ Draw representations of 3-dimensional geometric objects from different perspectives

Measurement—Using measurement relationships, a student can

- ✓ Solve problems of angle measure involving polygons

Proficient

Algebraic Relationships—Using algebraic relationships, a student can

- ✓ Identify quantitative relationships and determine the type(s) of function that might model the situation to solve the problem (exponential)
- ✓ Analyze linear functions by investigating rates of change and intercepts
- ✓ Apply appropriate properties of exponents to solve equations
- ✓ Compare and contrast various forms of representations of patterns (quadratic)

Geometric and Spatial Relationships—Using geometric and spatial relationships, a student can

- ✓ Use inductive and deductive reasoning to establish the validity of geometric conjectures
- ✓ Solve problems involving 2-dimensional objects represented with Cartesian

coordinates

- ✓ Use constructions and the coordinate plane to represent translations, reflections, rotations, and dilations of objects
- ✓ Identify types of symmetries of 3-dimensional figures
- ✓ Use vertex-edge graphs or networks to find optimal solutions

Measurement—Using measurement relationships, a student can

- ✓ Solve problems of angle measure involving parallel lines cut by a transversal
- ✓ Determine the surface area of geometric figures, including cylinders, cones, and spheres

Basic

Algebraic Relationships—Using algebraic relationships, a student can

- ✓ Generalize patterns using explicitly or recursively defined functions
- ✓ Apply appropriate properties of exponents to simplify expressions
- ✓ Identify quantitative relationships and determine the type(s) of function that might model the situation to solve the problem (absolute value and quadratic)
- ✓ Compare and contrast various forms of representations of patterns (linear)

Geometric and Spatial Relationships—Using geometric and spatial relationships, a student can

- ✓ Identify types of symmetries of 2-dimensional figures (rotational)

Measurement—Using measurement relationships, a student can

- ✓ Solve problems of angle measure involving triangles
- ✓ Determine the volume of geometric figures, including cylinders, cones, and spheres

Below Basic

Algebraic Relationships—Using algebraic relationships, a student can

- ✓ Identify quantitative relationships and determine the type(s) of function that might model the situation to solve the problem (linear)

Geometric and Spatial Relationships—Using geometric and spatial relationships, a student can

- ✓ Identify types of symmetries of 2-dimensional figures (line)

Measurement—Using measurement relationships, a student can

- ✓ Determine the volume of geometric figures (prism and pyramids)

Missouri End-of-Course Assessment Achievement-Level Descriptors
Government
Achievement Levels

Advanced: Students performing at the Advanced level on the Missouri End-of-Course Assessment demonstrate a thorough understanding of the Course-Level Expectations for Government. They demonstrate these skills in addition to understanding and applying the skills at the Proficient level. Students scoring at the Advanced level use a wide range of strategies to understand and apply the concepts of government.

Proficient: Students performing at the Proficient level on the Missouri End-of-Course Assessment demonstrate an understanding of the Course-Level Expectations for Government. They demonstrate these skills in addition to understanding and applying the skills at the Basic level. Students scoring at the Proficient level use a range of strategies to understand and apply the concepts of government.

Basic: Students performing at the Basic level on the Missouri End-of-Course Assessment demonstrate a partial understanding of the Course-Level Expectations for Government. They demonstrate these skills in addition to understanding and applying the skills at the Below Basic level. Students scoring at the Basic level use some strategies to understand and apply the concepts of government.

Below Basic: Students performing at the Below Basic level on the Missouri End-of-Course Assessment demonstrate a limited understanding of the Course-Level Expectations for Government. In addition to demonstrating these skills, students scoring at the Below Basic level use few strategies and demonstrate a limited understanding of important government content and concepts.

Achievement Descriptors

Advanced

Knowledge of the principles expressed in documents shaping constitutional democracy in the United States—A student can

- ✓ Apply the principles of constitutional democracy to complex historical and contemporary issues
- ✓ Thoroughly assess the changing roles of government
- ✓ Describe the historical foundations of the United States governmental system by citing the influence of different documents and writings
- ✓ Determine the civic responsibilities of individual citizens
- ✓ Identify and give clear examples of democracies and republics
- ✓ Explain the relevance of constitutional principles and make complex connections to different ~~foundational~~ historical documents and court cases

Knowledge of principles and processes of governance systems—A student can

- ✓ Describe in detail the structure of federal and state levels of government and the purposes of ~~both federal and state~~ laws
- ✓ Thoroughly explain the importance of government principles
- ✓ Evaluate the roles and influence of political parties and interest groups
- ✓ Thoroughly explain ~~Explain various~~ processes pertaining to ~~different~~ governmental systems

Proficient

Knowledge of the principles expressed in documents shaping constitutional democracy in the United States—A student can

- ✓ Apply the principles of constitutional democracy to historical and contemporary issues
- ✓ Assess the changing roles of government
- ✓ Describe the historical foundations of the United States governmental system
- ✓ Determine the civic responsibilities of individual citizens
- ✓ Identify and give examples of democracies and republics
- ✓ Explain the relevance and connection of constitutional principles in different historical documents and court cases

Knowledge of principles and processes of governance systems—A student can

- ✓ Describe the structure of federal and state levels of government and the purposes of laws
- ✓ Explain the importance of government principles
- ✓ Evaluate the roles and influence of political parties and interest groups
- ✓ Explain the processes pertaining to governmental systems

Basic

Knowledge of the principles expressed in documents shaping constitutional democracy in the United States—A student can

- ✓ Describe the principles of constitutional democracy
- ✓ Explain the changing roles of government
- ✓ ~~Explain~~ Identify the historical foundations of the United States governmental system
- ✓ Describe the civic responsibilities of individual citizens
- ✓ Identify democracies and republics
- ✓ Describe the relevance of different historicall documents

Knowledge of principles and processes of governance systems—A student can

- ✓ Identify the structure of government and the purposes of laws
- ✓ Define different government principles
- ✓ Identify the roles and influence of political parties and interest groups
- ✓ Recognize the processes pertaining to governance systems

Below Basic

Knowledge of the principles expressed in documents shaping constitutional democracy in the United States—A student can

- ✓ Identify the principles of constitutional democracy
- ✓ Recognize the changing roles of government
- ✓ Recognize the historical foundations of the United States governmental system
- ✓ Identify the civic responsibilities of individual citizens
- ✓ Inconsistently identifies democracies and republics
- ✓ Identify different relevant historical documents

Knowledge of principles and processes of governance systems—A student can

- ✓ Inconsistently identifies the structure of government and the purposes of laws
- ✓ Inconsistently defines different government principles
- ✓ Identify the roles and influence of political parties and interest groups
- ✓ Recognize the processes pertaining to governance systems

Missouri End-of-Course Assessment Achievement-Level Descriptors
American History
Achievement Levels

Advanced: Students performing at the Advanced level on the Missouri End-of-Course Assessment demonstrate a thorough understanding of the Course-Level Expectations for American History. They demonstrate these skills in addition to understanding and applying the skills at the Proficient level. Students scoring at the Advanced level effectively and consistently demonstrate an understanding and apply concepts in American History.

Proficient: Students performing at the Proficient level on the Missouri End-of-Course Assessment demonstrate an understanding of the Course-Level Expectations for American History. They demonstrate these skills in addition to understanding and applying the skills at the Basic level. Students scoring at the Proficient level demonstrate understanding and apply concepts in American History.

Basic: Students performing at the Basic level on the Missouri End-of-Course Assessment demonstrate a partial understanding of the Course-Level Expectations for American History. They demonstrate these skills in addition to understanding and applying the skills at the Below Basic level. Students scoring at the Basic level use some strategies to demonstrate partial understanding and apply concepts in American History.

Below Basic: Students performing at the Below Basic level on the Missouri End-of-Course Assessment demonstrate a limited understanding of the Course-Level Expectations for American History. In addition to demonstrating these skills, students scoring at the Below Basic level use few strategies and demonstrate a limited understanding of important content and concepts in American History.

Achievement Descriptors

Advanced

Knowledge of continuity and change in the history of Missouri and the United States—A student can

- ✓ Describe various motivations and challenges for people migrating from many regions of the world and the interactions of cultures and religious traditions that have contributed to America's history from Reconstruction to the present
- ✓ Analyze the evolution of American democracy by recognizing events and movements that expanded the role of the government, civic participation, and civil rights from Reconstruction to the present
- ✓ Apply various major economic concepts in the context of the historical period studied
- ✓ Thoroughly explain the importance of various government principles within the context of United States history from Reconstruction to the present
- ✓ Analyze the various roles and influence of political parties and interest groups from Reconstruction to the present
- ✓ Describe the historical development of various aspects of the American economy
- ✓ Thoroughly analyze the interplay of people, business, labor unions, and government with respect to regulation and to fiscal and monetary policy in the United States economy
- ✓ ~~Effectively survey~~ Explain the functions and effects of major economic institutions of the United States economy
- ✓ Identify the various roles of the government in the United States economy
- ✓ Distinguish ~~major~~ patterns and issues with regard to population distribution, demographics, settlements, migrations, and cultures in the United States

- ✓ Identify and ~~thoroughly~~ explain criteria that give regions their identities in different periods of United States history; connect ideas about how and why regions change
- ✓ Describe and evaluate the evolution of United States domestic and foreign policies from Reconstruction to the present by citing specific policy-shaping events

Knowledge of continuity and change in the history of the world—A student can

- ✓ ~~Effectively analyze~~ Analyze various aspects of twentieth century wars pertinent to United States history

Proficient

Knowledge of continuity and change in the history of Missouri and the United States—A student can

- ✓ Describe the migrations of people from many regions of the world and the interactions of cultures and religious traditions that have contributed to America's history from Reconstruction to the present
- ✓ Analyze the evolution of American democracy—its ideas, institutions, and political processes from Reconstruction to the present
- ✓ ~~Apply~~ Explain major economic concepts in the context of the historical period studied
- ✓ Explain the importance of government principles within the context of United States history from Reconstruction to the present
- ✓ Analyze the significance of the roles and influence of political parties and interest groups from Reconstruction to the present
- ✓ Describe significant aspects of the historical development of the American economy
- ✓ Analyze the roles people, business, labor unions, and government play in the United States economy
- ✓ ~~Draw conclusions about~~ Survey the functions and effects of major economic institutions of the United States economy.
- ✓ Identify ~~the~~ significant roles of government in the United States economy
- ✓ Distinguish major patterns and issues with regard to population distribution, demographics, settlements, migrations, and cultures in the United States
- ✓ List ~~and explain~~ criteria that give regions their identities in different periods of United States history; explain how and why regions change

- ✓ ~~Analyze the evolution~~ Describe the changes of United States domestic and foreign policies from Reconstruction to the present

Knowledge of continuity and change in the history of the world—A student can

- ✓ ~~Analyze~~ Demonstrate an understanding of the causes and impacts of the wars in the twentieth century that are pertinent to United States history

Basic

Knowledge of continuity and change in the history of Missouri and the United States—A student can

- ✓ Identify the migrations of people from many regions of the world that have contributed to America's history from Reconstruction to the present
- ✓ Explain the evolution of American democracy—its ideas, institutions, and political processes from Reconstruction to the present
- ✓ Describe major economic concepts in the context of the historical period studied
- ✓ Describe the importance of government principles within the context of United States history from Reconstruction to the present
- ✓ Explain the roles and influence of political parties and interest groups from Reconstruction to the present
- ✓ Explain the roles people, business, labor unions, and government play in the United States economy
- ✓ Identify the functions and effects of major economic institutions of the United States economy
- ✓ Describe major patterns and issues with regard to population distribution, demographics, settlements, migrations, and cultures in the United States
- ✓ Identify criteria that give regions their identities in different periods of United States history; describe how and why regions change
- ✓ ~~Describe the evolution of~~ United States domestic and foreign policies from Reconstruction to the present

Knowledge of continuity and change in the history of the world—A student can

- ✓ Describe the wars of the twentieth century pertinent to United States history

Below Basic

Knowledge of continuity and change in the history of Missouri and the United States—A student can

- ✓ Describe the evolution of American democracy—its ideas, institutions, and political processes from Reconstruction to the present
- ✓ Identify major economic concepts
- ✓ Identify government principles
- ✓ Describe the roles and influence of political parties and interest groups from Reconstruction to the present
- ✓ Describe the roles people, business, labor unions, and government play in the United States economy
- ✓ Identify major patterns and issues with regard to population distribution, demographics, settlements, migrations, and cultures in the United States
- ✓ Identify United States domestic and foreign policies from Reconstruction to the present

Knowledge of continuity and change in the history of the world—A student can

- ✓ Identify the wars of the twentieth century pertinent to United States history

APPENDIX I:
QUALIFYING TEST

Pre-Standard Setting Self-Evaluation Assessment for Judges of the Missouri EOC Assessments

1. Why are Achievement Level Descriptors such an integral part of the standard-setting process?
 - A. They provide an anchor, giving concrete meaning to the terms Basic, Proficient, and Advanced.
 - B. They describe critical knowledge and skills that all students at a given performance level should possess.
 - C. They define all of the items that are contained on the EOC.
 - D. They summarize elements of the Course-Level Expectations for the course.

2. Which of these statements about standard setting is TRUE?
 - A. Panelists should use their best judgment to make their recommendations but should rely more on various empirical data to be provided during the sessions.
 - B. While the EOC assessments are given statewide, judges should make recommendations based on the unique characteristics of *their* districts since other panelists will focus on other district types.
 - C. A judge who concludes that the “proper” cut score for Proficient is 24 should make a final recommendation of 22 or 23 to account for errors that are present in any assessment.
 - D. Judges must consider both the “stem” *and* answer options in selected-response items in deciding what percent of students should answer correctly.

3. Joe the Judge decided that about 50% of the typical Proficient students in Missouri taking the EOC assessment should answer Item 32 correctly. He coded 50% under Proficient on his Rating Form. What error did he make?
 - A. He should have coded 45% since some percent of special-needs students will take the assessment.
 - B. He should have considered *barely* Proficient, not *typical* Proficient, students.
 - C. He should reconsider his judgment, as 50% correct couldn’t possibly be considered Proficient.
 - D. He made no error here. This was the correct procedure.

4. Judge Jan thought that a particular item on her EOC assessment was clear, and that it measured content that was very important. She also thought that students should answer this correctly if they were Proficient performers. Which of these percentages should she most likely enter for Proficient on her Rating Form?

- A. 90%—because almost all students whose course achievement is Proficient should answer correctly
 - B. 65%—because this is the approximate percentage that corresponds to “pass” in the school’s grading system
 - C. 50%—because many students taking this test will be learning-disabled or disadvantaged or won’t take the assessment seriously
 - D. 35%—because large proportions of students taking this test aren’t receiving instruction following the state’s content standards
5. Which of these sets of “Angoff” judgments for a selected-response (SR) item appears to be *improper* and why?

	Cut Score		
	Below Basic/ Basic	Basic/ Proficient	Proficient/ Advanced
A.	25%	35%	40%
B.	80%	90%	100%
C.	50%	50%	55%
D.	40%	75%	95%

- A. A, because these are unrealistically low expectations for an SR item.
- B. B, because it is unreasonable to expect students to score this well on an SR item.
- C. C, because the judge doesn’t expect higher-achieving students to perform any better on the item than lower-achieving students.
- D. D, because the increase in percentages across the three groups is unrealistically large.

APPENDIX J:
MID-PROCESS EVALUATION

MISSOURI EOC STANDARD SETTING

November 2–5, 2009

Mid-Process Evaluation

I understand the background information related to the standard-setting procedures and I am ready to begin.

_____ YES

_____ NO

If no, use the space below to identify the issues or procedures you would like the facilitator to review before the formal standard setting begins.

APPENDIX L:
PARTICIPANT EVALUATION FORM

MISSOURI EOC STANDARD SETTING

November 2–5, 2009

Participant Evaluation Form

This form contains six sections, five of which ask for feedback on specific aspects of this standard-setting session. The last section asks for general reactions to the standard-setting session. Please fill out each of these sections as completely as possible in order to provide information that will help in the improvement of similar sessions in the future. Your identification number is used for analysis purposes only. Your responses to these questions will be held in strict confidence and will be analyzed in conjunction with those of the other judges who participated in this meeting.

Panelist I.D. (optional) _____

Section I: Opening Training Sessions

The following statements seek your judgments about the Opening Sessions for the Missouri End-of-Course standard-setting meeting. Please circle one value on the scale under each statement that best characterizes your judgment.

1. The Opening Session provided adequate background information about the Missouri End-of-Course Assessments.

5	4	3	2	1
Completely		Somewhat		Not at all

2. The topics covered in the Opening Session were appropriate to providing a context for my role in this meeting.

5	4	3	2	1
Completely		Somewhat		Not at all

3. The content of the Opening Sessions was:

5	4	3	2	1
Very useful		Somewhat useful		Not useful

4. The organization of the Opening Sessions was:

5	4	3	2	1
Very good		Acceptable		Very poor

The following statements seek your judgments about the Opening Session for the Missouri End-of-Course standard-setting session. Please write your responses to each prompt on the lines provided.

5. Did you have questions or concerns that were not answered or addressed in the Opening Session? Please indicate these below. (Use the reverse side for additional space.)

6. What was most helpful about the Opening Session?

7. Please use the space below to provide additional comments concerning the adequacy, appropriateness, usefulness, or organization of the Opening Session.

Section II: Discussing Proficient Performance

The following statements seek your judgments about the discussions of Proficient performance as they relate to Missouri’s End-of-Course Assessments. Please circle the value on the scale under each statement that best characterizes your judgment.

8. The activities used to help operationalize Proficient performance were:

5	4	3	2	1
Very useful		Somewhat useful		Not useful

9. By the end of the activity, my conception of Proficient performance was:

5	4	3	2	1
Very well formed		Moderately well formed		Not well formed

10. Please use the space below to provide additional comments concerning the activities around operationalizing Proficient performance for Missouri’s End-of-Course Assessments.

Section III: Discussing Basic Performance

The following statements seek your judgments about the discussions of Basic performance as they relate to Missouri’s End-of-Course Assessments. Please circle the value on the scale under each statement that best represents your judgment.

11. The activities used to help operationalize Basic performance were:

5	4	3	2	1
Very useful		Somewhat useful		Not useful

12. By the end of this activity my conception of Basic performance was:

5	4	3	2	1
Very well formed		Moderately well formed		Not well formed

13. Please use the space below to provide additional comments concerning the activities around operationalizing Basic performance for Missouri’s End-of-Course Assessments.

Section IV: Discussing Advanced Performance

The following statements seek your judgments about the discussions of Advanced performance as they relate to Missouri’s End-of-Course Assessments. Please circle the value on the scale under each statement that best represents your judgment.

14. The activities used to help operationalize Advanced performance were:

5	4	3	2	1
Very useful		Somewhat useful		Not useful

15. By the end of this activity my conception of Advanced performance was:

5	4	3	2	1
Very well formed		Moderately well formed		Not well formed

16. Please use the space below to provide additional comments concerning the activities around operationalizing Advanced performance for Missouri’s End-of-Course Assessments.

Section V: Item Rating Activities

The following statements seek your judgments about the item rating activities as they relate to the Missouri End-of-Course standard-setting meeting. Please circle the value on the scale under each statement that best represents your judgment.

17. Using the sample items to prepare for the actual item rating was:

5	4	3	2	1
Very helpful		Somewhat helpful		Not helpful

18. The explanation of the item data during the sample item portion of the training was:

5	4	3	2	1
Very helpful		Somewhat helpful		Not helpful

19. The Item Rating Form was:

5	4	3	2	1
Very easy to use		Somewhat easy to use		Not at all easy to use

20. The information provided prior to each round of rating was:

5	4	3	2	1
Very useful		Somewhat useful		Not useful

21. My level of understanding of the tasks I was to accomplish for each round was:

5	4	3	2	1
Very good		Acceptable		Very poor

22. The amount of time I had to complete the tasks during each round was:

5	4	3	2	1
Far too long		About right		Far too short

23. Please use the space below to provide additional comments concerning the instructions and explanations you received, the adequacy of the time available, your levels of understanding of the process, or any other aspects of the item rating activities. (Use reverse side for additional space.)

Section VI: The Overall Missouri End-of-Course Standard-Setting Session

The following statements seek your judgments about the overall processes and procedures used during the Missouri End-of-Course standard-setting session in which you participated as a panelist. Please circle the value on the scale under each statement that best represents your judgment.

24. I feel that this standard-setting session provided me an opportunity to use my best judgment in selecting and revising estimates for a recommended standard of *Proficient* performance.

5	4	3	2	1
To a great extent		To some extent		Not at all

25. I feel that this standard-setting meeting provided me an opportunity to use my best judgment in selecting and revising estimates for a recommended standard of Basic performance.

5	4	3	2	1
To a great extent		To some extent		Not at all

26. I feel that this standard-setting meeting provided me an opportunity to use my best judgment in selecting and revising estimates for a recommended standard of Advanced performance.

5	4	3	2	1
To a great extent		To some extent		Not at all

27. Please provide any comments you wish to share regarding the quality of assistance provided by the standard-setting staff.

28. Please provide any additional comments you wish to share regarding the overall meeting.

*Two English I panelists did not respond to this question.

Item 15

By the end of this activity my conception of Advanced performance was:

5	4	3	2	1
Very well formed	Moderately well formed		Not well formed	

Rating	English I		Algebra II		Geometry		Government		History		Total	
	Count	%	Count	%	Count	%	Count	%	Count	%	Count	%
5	7	50	9	56	10	63	7	58	10	77	43	61
4	6	43	6	38	5	31	4	33	3	23	24	34
3	1	7	1	6	0	0	1	8	0	0	3	4
2	0	0	0	0	1	6	0	0	0	0	1	1
1	0	0	0	0	0	0	0	0	0	0	0	0
Total	14*	100	16	100	16	100	12	100	13	100	71	100

*Two English I panelists did not respond to this question.

Item 17

Using the sample items to prepare for the actual item rating was:

5	4	3	2	1
Very helpful	Somewhat helpful			Not helpful

Rating	English I		Algebra II		Geometry		Government		History		Total	
	Count	%	Count	%	Count	%	Count	%	Count	%	Count	%
5	8	53	12	80	8	50	8	68	9	69	45	63
4	4	27	1	7	2	13	4	33	2	15	13	18
3	3	20	2	13	5	31	0	0	2	15	12	17
2	0	0	0	0	1	6	0	0	0	0	1	1
1	0	0	0	0	0	0	0	0	0	0	0	0
Total	15*	100	15*	100	16	100	12	100	13	100	71	100

*One English I panelist and one Algebra II panelist did not respond to this question.

Item 18

The explanation of the item data during the sample item portion of the training was:

5	4	3	2	1
Very helpful	Somewhat helpful			Not helpful

Rating	English I		Algebra II		Geometry		Government		History		Total	
	Count	%	Count	%	Count	%	Count	%	Count	%	Count	%
5	9	57	12	80	7	44	9	75	10	77	47	65
4	7	44	2	13	6	38	3	25	2	15	20	28
3	0	0	1	7	3	19	0	0	1	8	5	7
2	0	0	0	0	0	0	0	0	0	0	0	0
1	0	0	0	0	0	0	0	0	0	0	0	0
Total	16	100	15*	100	16	100	12	100	13	100	72	100

*One Algebra II panelist did not respond to this question.

Item 19

The Item Rating Form was:

5	4	3	2	1
Very easy to use	Somewhat easy to use			Not at all easy to use

Rating	English I		Algebra II		Geometry		Government		History		Total	
	Count	%	Count	%	Count	%	Count	%	Count	%	Count	%
5	14	93	11	73	12	75	8	67	9	69	54	76
4	1	7	4	27	4	25	3	25	4	31	16	23
3	0	0	0	0	0	0	1	8	0	0	1	1
2	0	0	0	0	0	0	0	0	0	0	0	0
1	0	0	0	0	0	0	0	0	0	0	0	0
Total	15*	100	15*	100	16	100	12	100	13	100	71	100

*One English I panelist and one Algebra II panelist did not respond to this question.

Item 20

The information provided prior to each round of rating was:

5	4	3	2	1
Very useful	Somewhat useful			Not useful

Rating	English I		Algebra II		Geometry		Government		History		Total	
	Count	%	Count	%	Count	%	Count	%	Count	%	Count	%
5	10	63	13	87	12	75	8	67	9	69	52	72
4	6	38	2	13	2	13	2	17	4	31	16	22
3	0	0	0	0	2	13	2	17	0	0	4	6
2	0	0	0	0	0	0	0	0	0	0	0	0
1	0	0	0	0	0	0	0	0	0	0	0	0
Total	16	100	15*	100	16	100	12	100	13	100	72	100

*One Algebra II panelist did not respond to this question.

Item 21

My level of understanding of the tasks I was to accomplish for each round was:

5	4	3	2	1
Very good		Acceptable		Very poor

Rating	English I		Algebra II		Geometry		Government		History		Total	
	Count	%	Count	%	Count	%	Count	%	Count	%	Count	%
5	12	75	10	67	13	81	9	75	10	77	54	75
4	3	18	5	33	3	19	1	8	3	23	15	21
3	1	6	0	0	0	0	2	17	0	0	3	4
2	0	0	0	0	0	0	0	0	0	0	0	0
1	0	0	0	0	0	0	0	0	0	0	0	0
Total	16	100	15*	100	16	100	12	100	13	100	72	100

*One Algebra II panelist did not respond to this question.

Item 22

The amount of time I had to complete the tasks during each round was:

5	4	3	2	1
Far too long		About right		Far too short

Rating	English I		Algebra II		Geometry		Government		History		Total	
	Count	%	Count	%	Count	%	Count	%	Count	%	Count	%
5	2	13	0	0	0	0	5	42	1	8	8	11
4	1	6	0	0	4	25	0	0	0	92	5	7
3	13	81	15	100	12	75	7	58	12	0	59	82
2	0	0	0	0	0	0	0	0	0	0	0	0
1	0	0	0	0	0	0	0	0	0	0	0	0
Total	16	100	15*	100	16	100	12	100	13	100	72	100

*One Algebra II panelist did not respond to this question.

Item 24

I feel that this standard-setting session provided me an opportunity to use my best judgment in selecting and revising estimates for a recommended standard of Proficient performance.

5	4	3	2	1
To a great extent	To some extent			Not at all

Rating	English I		Algebra II		Geometry		Government		History		Total	
	Count	%	Count	%	Count	%	Count	%	Count	%	Count	%
5	13	81	11	73	11	69	8	67	12	92	55	76
4	3	19	4	27	4	25	4	33	1	8	16	22
3	0	0	0	0	1	6	0	0	0	0	1	1
2	0	0	0	0	0	0	0	0	0	0	0	0
1	0	0	0	0	0	0	0	0	0	0	0	0
Total	16	100	15*	100	16	100	12	100	13	100	72	100

*One Algebra II panelist did not respond to this question.

Item 25

I feel that this standard-setting meeting provided me an opportunity to use my best judgment in selecting and revising estimates for a recommended standard of Basic performance.

5	4	3	2	1
To a great extent	To some extent			Not at all

Rating	English I		Algebra II		Geometry		Government		History		Total	
	Count	%	Count	%	Count	%	Count	%	Count	%	Count	%
5	12	75	11	73	12	75	7	58	12	92	54	75
4	4	25	3	20	3	19	4	33	1	8	15	21
3	0	0	1	7	1	6	1	8	0	0	3	4
2	0	0	0	0	0	0	0	0	0	0	0	0
1	0	0	0	0	0	0	0	0	0	0	0	0
Total	16	100	15*	100	16	100	12	100	13	100	72	100

*One Algebra II panelist did not respond to this question.

Item 26

I feel that this standard-setting meeting provided me an opportunity to use my best judgment in selecting and revising estimates for a recommended standard of Advanced performance.

5	4	3	2	1
To a great extent	To some extent			Not at all

Rating	English I		Algebra II		Geometry		Government		History		Total	
	Count	%	Count	%	Count	%	Count	%	Count	%	Count	%
5	12	75	12	80	11	69	9	75	11	85	55	76
4	4	25	3	20	4	25	3	25	2	15	16	22
3	0	0	0	0	1	6	0	0	0	0	1	1
2	0	0	0	0	0	0	0	0	0	0	0	0
1	0	0	0	0	0	0	0	0	0	0	0	0
Total	16	100	15*	100	16	100	12	100	13	100	72	100

*One Algebra II panelist did not respond to this question.
