## Table of Contents

List of Abbreviations .....	viii
Chapter Summaries .....	ix
Executive Summary .....	1
E.1. Assessment Overview .....	1
E.2. Background.....	2
E.3. Administration.....	2
E.4. Student Performance .....	3
E.5. Validity Evidence .....	8
Chapter 1: Introduction.....	9
1.1. Purpose of the Technical Report.....	9
1.2. Summary of the MO EOC Assessments.....	9
1.3. Purpose and Intended Use of Test Scores.....	11
1.4. Administration .....	12
1.5. Reporting the Results.....	12
1.6. Accountability.....	12
1.7. Missouri’s Current Assessment System.....	13
1.8. History of the MO EOC Assessments .....	14
1.9. Organizational Support .....	16
Chapter 2: Test Development .....	18
2.1. Introduction.....	18
2.2. Test Blueprints.....	18
2.3. Test Specifications .....	21
2.4. Item Development.....	23
2.4.1. Item Writing .....	24
2.4.2. Universal Design .....	25
2.4.3. Content and Bias Review Process .....	26
2.5. Form Construction .....	29
2.5.1. Field-Test Selection and Administration.....	29
2.5.2. Statistical Item Review.....	29
2.5.3. Operational Test Selection and Administration .....	30
2.6. Braille and Large Print Versions.....	31
2.7. Online Forms Construction.....	32
2.8. Quality Control for Form Construction .....	32
2.9. Summary .....	33
Chapter 3: Standard Setting .....	34
3.1. Introduction.....	34
3.2. 2015 Standard Setting.....	34
3.2.1. Panelists .....	35
3.2.2. Staffing .....	35
3.2.3. Development of Achievement Level Descriptors (ALDs).....	35
3.2.4. Results .....	35

3.3. 2015 Cutpoint Validation.....	35
3.3.1. Panelists.....	36
3.3.2. Staffing.....	36
3.3.3. Development of ALDs.....	36
3.3.4. Results.....	36
Chapter 4: Item Analysis.....	37
4.1. Introduction.....	37
4.2. Item-Level Statistics.....	38
4.3. Speededness.....	38
4.4. Differential Item Functioning (DIF).....	38
4.5. Summary.....	43
Chapter 5: Test Administration.....	44
5.1. Introduction.....	44
5.2. Students for Whom the MO EOC Assessments are Appropriate.....	44
5.2.1. Students with Individualized Education Programs (IEPs).....	44
5.2.2. Students with Individual Accommodation Programs.....	45
5.2.3. English Language Learner (ELL) Students.....	45
5.3. Students for Whom a School or District is Accountable.....	45
5.4. Dissemination of Testing Materials and Information.....	45
5.5. District and Test Examiner Training.....	46
5.6. Test Security.....	46
5.6.1. Summary.....	46
5.6.2. Detection and Prevention of Testing Irregularities.....	47
5.7. Test Administration.....	48
5.7.1. Test Organization.....	48
5.7.2. Test and Ancillary Materials.....	48
5.7.3. Preparing the Test Administration Site and the Students.....	49
5.7.4. Directions for Administration.....	50
5.8. Accommodations and Modifications.....	51
5.9. Materials Handling and Return.....	55
5.9.1. Materials Handling during Administration.....	55
5.9.2. Questar’s Secure Material Check-In Procedures.....	55
5.10. Summary.....	56
Chapter 6: Scoring.....	57
6.1. Introduction.....	57
6.2. Scoring of the PE/WPs.....	57
6.2.1. Scorer Recruitment and Selection.....	57
6.2.2. Scorer Training and Qualification Procedures.....	58
6.3. Scorer Training.....	58
6.4. Qualification.....	59
6.4.1. Second Read Procedures.....	59
6.4.2. Scoring Monitoring and Recalibration Procedures.....	60
6.4.2.1. Read-Behinds.....	60
6.4.2.2. Calibration.....	60

6.4.2.3. Managing Scoring Quality (Scorer Exception Processing)	60
6.5. Validity Responses	61
6.5.1. Validity as Review	63
6.5.2. Frequency Distribution	63
6.5.3. Retraining and Resetting Scores	64
6.5.4. Reporting and Data Analysis	64
6.5.5. Item Types and Score Points for each Content Area	64
6.5.5.1. Summer 2016	64
6.5.5.2. Fall 2016	64
6.5.5.3. Spring 2017	65
6.6. Rater Agreement	65
Chapter 7: Scaling and Equating	69
7.1. Introduction	69
7.2. Item Response Theory (IRT)	69
7.3. Scaling and Equating	70
7.3.1. Scale Score Ranges	70
7.3.2. Recalibration for Biology	71
7.3.3. Estimation of the Slope and Intercept	72
7.4. RSS Conversions	72

## List of Abbreviations

Below is a list of abbreviations that appear in this technical report.

ALD	achievement level descriptor
ARC	Assessment Resource Center
AYP	adequate yearly progress
CLE	course-level expectation
CR	constructed-response
CSEM	conditional standard error of measurement
CTT	classical test theory
DESE	Department of Elementary and Secondary Education
DIF	differential item functioning
DOK	Depth of Knowledge
EFT	embedded field test
ELL	English language learner
EOC	end-of-course
ESEA	Elementary and Secondary Education Act
FRL	free and reduced lunch
GLE	grade-level expectation
GRF	general research file
IAP	Individualized Accommodation Program
IDEA	Individuals with Disabilities Education Act
IEP	Individualized Education Program
IRT	item response theory
ISR	Individual Student Report
ITS	Internet Testing Systems
LEP	limited English proficient
LOSS	lowest obtainable scale score
MAP	Missouri Assessment Program
MCDS	Missouri Comprehensive Data System
MH	Mantel-Haenszel
MLS	Missouri Learning Standard
MOSIS	Missouri Student Information System
NCLB	No Child Left Behind Act
PE	performance event
RS	raw score
RSS	raw-to-scale score
SD	standard deviation
SE	standard error
SEM	standard error of measurement
SR	selected-response
TAC	Technical Advisory Committee
WP	writing prompt

## Chapter Summaries

Below are summaries of the information contained in each chapter of this report.

### ***Executive Summary***

This section provides a high-level overview and summary of the MO EOC Assessments and the results from the 2016–2017 administration.

### ***Chapter 1: Introduction***

Chapter 1 provides background information about the MO EOC Assessments, as well as the MAP in general. It also includes information about the organizational support provided by each contractor and subcontractor for the MO EOC Assessment program. The chapter ends with a statement of purpose for this technical report.

### ***Chapter 2: Test Development***

Chapter 2 provides the test blueprints and test specifications for the Summer 2016, Fall 2016, and Spring 2017 administrations. Appendix A and Appendix B provide the target and actual point distributions, respectively. Information about item writing, content and bias reviews, test form construction, and statistical item review is also presented because the 2016–2017 test forms were constructed using items field tested in Spring 2008, Spring 2009, or Spring 2010. The evidence is important to the content-related validity of the MO EOC Assessment scores. This chapter also covers principles of universal design and outlines the quality control processes employed throughout the test development process. Documentation of previous test designs can be found in the technical reports located on DESE’s website at <http://dese.mo.gov/college-career-readiness/assessment/assessment-technical-support-materials>.

### ***Chapter 3: Standard Setting***

Chapter 3 summarizes the 2015 standard setting for Physical Science and the 2015 cutpoint validation for English I, English II, Algebra I, Algebra II, and Geometry. Full reports for these meetings are provided in the *2014–2015 MO EOC Technical Report*. Information on the 2008 and 2009 standard settings can be found in the *2009–2010 MO EOC Phase I and Phase II Technical Reports*.

### ***Chapter 4: Item Analysis***

Chapter 4 contains item-level analysis summary information, including item difficulty and item discrimination indices, for each content area for the Summer 2016, Fall 2016, and Spring 2017 operational items. The results indicate that the MO EOC Assessments have sound psychometric properties. The items measure achievement across a broad range of difficulty and most items are appropriately correlated with the total test score.

### ***Chapter 5: Test Administration***

Chapter 5 contains information about the administration of the MO EOC Assessments, beginning with a description of students for whom the assessments are appropriate. Details of the administration are then summarized. This summary includes a description of how the materials are distributed and how Test Examiners are trained, as well as information about the organization of the assessments, preparation of students to take the assessments, and directions for

administration. The chapter also includes information about the accommodations allowed on the MO EOC Assessments and describes how materials are submitted for processing and scoring.

### ***Chapter 6: Scoring***

Chapter 6 covers the scoring processes for both the selected-response (SR) and performance events/writing prompts (PE/WPs) on the MO EOC Assessments. It contains information on how Questar scored the MO EOC SR items and the PE/WPs, including the scoring training and qualification processes, scoring procedures, and monitoring for quality assurance. Finally, this chapter provides rater agreement for the Summer 2016, Fall 2016, and Spring 2017 administrations. Information in this chapter provides evidence to support the validity and reliability of rater scores.

### ***Chapter 7: Scaling and Equating***

Chapter 7 begins with an introduction to the item response theory (IRT) model used for scaling and equating the MO EOC Assessments. Next, the scaling and equating process for the Summer 2016, Fall 2016, and Spring 2017 are provided, followed by a description of the recalibration study for Biology. Finally, the raw-to-scale score (RSS) conversion tables for the Summer 2016, Fall 2016, and Spring 2017 operational forms are presented in Appendix D.

### ***Chapter 8: Reporting***

Chapter 8 contains information about the reports Questar produced for the MO EOC Assessments, including the Individual Student Report (ISR) and Student Score Label. A brief description of the state's data portal and reporting system is also included.

### ***Chapter 9: Summary Statistics***

Chapter 9 provides descriptive statistics for raw scores and scale scores for the MO EOC Assessments. Raw score statistics are summarized by test administration, content area, and cluster. Scale score statistics are summarized for each content area and are also broken down by gender and ethnicity, as well as migrant, free and reduced lunch (FRL), limited English proficient (LEP), Title I, Individualized Education Program (IEP), and accommodation statuses.

### ***Chapter 10: Reliability***

Chapter 10 begins by defining reliability and providing an overview of reliability estimation techniques. Raw-score internal consistency reliability coefficients are presented for all students and for each demographic group. Classification accuracy and classification consistency statistics are also presented. The results indicate acceptable reliability and measurement precision for the MO EOC tests.

### ***Chapter 11: Validity***

Chapter 11 begins with an introduction to the validity evidence for the MO EOC Assessments, followed by more specific evidence related to test content, the internal structure of the assessments, and other types of validity evidence proposed by the *Standards for Educational and Psychological Testing* (AERA, APA, & NCME, 2014). The chapter summarizes and reiterates validity evidence presented in earlier chapters in addition to providing new information. It provides an argument supporting the validity of the MO EOC Assessments for measuring Missouri students' mastery of the Missouri Learning Standards, for identifying students'

strengths and weaknesses, for serving as a basis for evaluating accountability plans, and for program evaluation.

## Executive Summary

This technical report provides a summary of the 2016–2017 administrations of the Missouri End-of-Course (MO EOC) Assessments in English II, Algebra I, Biology, English I, Algebra II, Geometry, Government, American History, and Physical Science. More specifically, it is designed to provide validity evidence to support the use and intended interpretation of the MO EOC test scores. The report provides details describing and verifying that the processes and procedures applied to the MO EOC Assessments adhere to professional standards and practices of educational assessment. The statistical analyses presented confirm that the MO EOC Assessments have sound psychometric properties.

Previous technical reports are often referenced to refer to historical information. They can be found on the Missouri Department of Elementary and Secondary Education (DESE) website at <http://dese.mo.gov/college-career-readiness/assessment/assessment-technical-support-materials>.

### E.1. Assessment Overview

The criterion-referenced MO EOC Assessments are designed to assess students' knowledge of the Missouri Learning Standards. The 2016–2017 school year marked the ninth operational administration of the English II, Algebra I, and Biology Assessments; the eighth operational administration of the English I, Algebra II, Geometry, Government, and American History Assessments; and the third operational administration of the Physical Science Assessment.

Prior to 2014–2015, all MO EOC Assessments were required. However, beginning in Fall 2014, districts were required to administer the English II, Algebra I, Biology, and Government Assessments to all students prior to graduation. For students who completed the Algebra I Assessment prior to high school, Algebra II is the required high school mathematics assessment for accountability purposes. Four MO EOC Assessments are optional (English I, Geometry, Physical Science, and American History).

Test forms for Biology, Government, and American History were original intact forms previously administered in other testing administrations. However, starting in Fall 2014, the following changes occurred for English I, English II, Algebra I, Algebra II, and Geometry and continued to be applied to the 2016–2017 administration:

- Revised test blueprints
- New test forms
- Alignment of existing items in English Language Arts and Mathematics to the Missouri Learning Standards
- New scoring rubrics for performance events (PEs) and change of PE scores
- Change of test length and total score points
- Addition of PEs to English I
- Updated achievement level descriptors (ALDs)

## **E.2. Background**

In 1993, the Missouri legislature passed the Outstanding Schools Act (Senate Bill 380), requiring the Missouri State Board of Education to adopt challenging academic performance standards that define the skills and competencies necessary for students to successfully advance through the public school system, prepare for post-secondary education and the workplace, and participate as citizens in a democratic society. The Missouri State Board of Education formally adopted the academic standards known as the Show-Me Standards in January 1996.

In addition to mandating the development of rigorous academic standards, the Outstanding Schools Act of 1993 required the development and implementation of a comprehensive assessment program to measure student proficiency in the knowledge, skills, and competencies identified in the standards. Therefore, upon adoption of the standards in 1996, Missouri developed the Missouri Assessment Program (MAP) that included grade-level assessments for elementary, middle, and high school students in core academic content areas.

In January 2007, the Missouri State Board of Education approved a plan to replace the MAP for high school students with the MO EOC Assessments beginning with English II, Algebra I, and Biology in 2008–2009. English I, Algebra II, Geometry, Government, and American History were added the following year, and Physical Science was added in 2014–2015. The MO EOC Assessments have been administered each summer, fall, and spring since:

- 2008–2009 for English II, Algebra I, and Biology (beginning with the Fall 2008 administration)
- 2009–2010 for English I, Algebra II, Geometry, Government, and American History (beginning with the Fall 2009 administration)
- 2014–2015 for Physical Science (beginning with the Fall 2014 administration)

## **E.3. Administration**

Missouri's goal is for every student to be Proficient, as defined by the Missouri State Board of Education. Therefore, EOC testing is conducted as close as possible to the end of each course to allow school staff and students the greatest opportunity to achieve the goal of proficiency.

The scope of this technical report includes the Summer 2016, Fall 2016, and Spring 2017 administrations. Data analyses for the total assessed population, which includes students who have not yet reached the secondary level, are based on a combination of assessment results and demographic criteria required by Missouri's approved Elementary and Secondary Education Act (ESEA) Flexibility Waiver.

Individual student reports (ISRs) are distributed to school districts following each assessment administration window. Building-, district- and state-level reports are available following each spring administration. Scores are used during the accountability year in which the tests are administered. The accountability year begins with the summer administration preceding the academic year. Therefore, the score reports for the 2016–2017 assessment year contained information from Summer 2016, Fall 2016, and Spring 2017.

#### E.4. Student Performance

The MO EOC Assessment score matches a student's performance to a defined achievement level. ALDs associated with each level provide details about the content expectations that students at that level meet or exceed. Missouri uses four achievement levels for the MO EOC Assessments: Below Basic, Basic, Proficient, and Advanced.

- Table E.1 displays the percentage of students at each achievement level for the Summer 2016, Fall 2016, and Spring 2017 MO EOC Assessments, as well as the overall percentages for all three administrations combined. Data for Physical Science is only included for Summer 2016 and Spring 2017 because no student took the Physical Science Assessment during the Fall 2016 administration.
- Table E.2 displays the percentage of students at each achievement level from 2008–2009 to 2016–2017 for the MO EOC Assessments. The test design was changed in Fall 2014 for English II, Algebra I, Algebra II, Biology, and Government. Therefore, it is not recommended to make direct comparisons of the 2014–2015 and 2015–2016 test results to prior results for the MO EOC Assessments. A dark vertical division is placed between the data for the 2013–2014 and 2014–2015 years to indicate caution in comparing results for the five content areas.

**Table E.1. Achievement Level Distribution for 2016–2017**

Content Area	Achievement Level	Summer 2016		Fall 2016		Spring 2017		Overall

Beginning with the 2012–2013 administration, Missouri began operating under the requirements of its approved ESEA Flexibility Waiver, which includes new high school EOC requirements beginning with the graduating class of 2017. This waiver, approved by the U.S. Department of Education in June 2012, gives Missouri flexibility from No Child Left Behind (NCLB) requirements and allows the state to use its own accountability system. In June 2015, the U.S. Department of Education renewed the approval of Missouri’s ESEA Flexibility Waiver for three years, through the end of the 2017–2018 school year. The waiver allows for one state accountability system, focus on continuous improvement, and targeting schools for support.<sup>1</sup>

Data for *all* tested students are used each year for purposes of item analysis and scaling and equating. For this reason, the numbers and/or percentages of tested students reported in the MO EOC technical reports for the 2008–2009 through the 2011–2012 administrations do not match the numbers of students reported by DESE for accountability purposes in those years. Through the 2011–2012 administration year, all students who took the MO EOC Assessments prior to entering high school were excluded from Missouri’s high school accountability data until they enrolled in high school.

The results of the Summer, Fall and Spring administrations, along with historical data, were reviewed by the Technical Advisory Committee (TAC) during the August 18, 2017 TAC meeting. Special attention was given to the Spring English II and Algebra I results, both of which had a reduced percent of students in the Proficient + Advanced performance level compared to the previous Spring. The TAC concluded that form effects were present. Following the TAC’s recommendation, the results for English II and Algebra I were not used for accountability purposes for the 2016-2017 school year. Further documentation of the form comparability analyses may be found in Chapter 9.

### **E.5. Validity Evidence**

The MO EOC Assessments are part of an integrated program of testing, accountability, and curricular and instructional support. This technical report provides details about the development and operation of the MO EOC Assessments. While Chapter 11 of this report is devoted to the documentation of validity evidence for the MO EOC Assessment scores, all information contained herein ultimately contributes to the argument for the validity of the interpretation and use of scores for their intended purposes.

---

<sup>1</sup> Find more information regarding Missouri’s ESEA Waiver at <http://dese.mo.gov/quality-schools/esea-flexibility-waiver>.

## Chapter 1: Introduction

### 1.1. Purpose of the Technical Report

This technical report provides for the historical background, statistical results, and details about the operations of the Summer 2016, Fall 2016, and Spring 2017 administrations of the Missouri End-of-Course (MO EOC) Assessments in English II, Algebra I, Biology, English I, Algebra II, Geometry, Government, American History, and Physical Science.

Because this report is technical in nature and the intended audience is psychometric and educational research experts, it is best understood with a working knowledge of measurement concepts such as reliability and validity and statistical concepts such as correlation. For some chapters, the reader is presumed to have basic familiarity with advanced topics in measurement and statistics such as item response theory (IRT).

This technical report provides extensive detail about the operation of the MO EOC Assessments, as well as the history of their development. The empirical reliability of the assessments and validity of intended uses of the scores are reported in this document. Chapter 10 contains a discussion of reliability and Chapter 11 summarizes the validity argument. The validity of score use and interpretation for any assessment stems from:

- The statement of the test’s purpose and the intended use of the scores
- The steps taken in designing the test
- The processes of developing the content of the test, consulting with stakeholders, communicating about the test to users, scoring and reporting, and conducting data analysis

The documentation of each of these steps is a necessary piece of a comprehensive, defensible validity argument for the intended uses of the assessment scores. While a specific chapter is devoted to validity, other parts of this document provide evidence necessary to assess the validity of the MO EOC Assessment scores for their intended purposes.

In reading this technical report, it is critical to remember that the testing program does not exist in a vacuum; it is not just a test. It is one part of a complex network intended to help schools to improve student learning. The MO EOC Assessments are an integrated program of testing and accountability, as well as curricular and instructional support. The assessments can be evaluated properly only within their full context.

### 1.2. Summary of the MO EOC Assessments

The MO EOC Assessments are criterion-referenced assessments designed to assess students’ knowledge of the Missouri Learning Standards that define the knowledge and skills students need in each grade level and course for success in college, other post-secondary training and careers.

English II, Algebra I, and Biology were developed and first administered in 2008–2009. English I, Algebra II, Geometry, Government, and American History were developed and first administered in 2009–2010. Physical Science was first administered in 2014–2015. Therefore, the 2016–2017 administration of the MO EOC Assessments marked the ninth operational year

for English II, Algebra I, and Biology; the eighth operational year for English I, Algebra II, Geometry, Government, and American History; and the third operational year for Physical Science. Previously used operational test forms were re-administered for all content areas for 2015–2016. Table 1.1 provides the major events that have occurred for the MO EOC Assessments from 2008–2009 to 2016–2017 to assist with the understanding and interpretation of test results throughout this report.

**Table 1.1. Summary of Major Events from 2008–2009 to 2016–2017**

Accountability Year	Event(s)
2008–2009	<ul style="list-style-type: none"> <li>English II, Algebra I, and Biology were administered operationally in both paper/pencil and online format (dual platform) starting in Fall 2008. These assessments consisted of both SR items and PE/WPs.</li> </ul>
2009–2010	<ul style="list-style-type: none"> <li>English I, Algebra II, Geometry, Government, and American History were administered operationally in both paper/pencil and online format (dual platform) starting in Fall 2009. These assessments consisted of SR items only.</li> </ul>
2010–2011	<ul style="list-style-type: none"> <li>PE/WPs were temporarily suspended from English II, Algebra I, and Biology starting in Summer 2010.</li> <li>Assessments with SR items only (which include English I, Algebra II, Geometry, American History, and Government) were available in online format only.</li> </ul>
2011–2012	<ul style="list-style-type: none"> <li>All assessments were administered online.</li> </ul>
2012–2013	<ul style="list-style-type: none"> <li>PE/WPs were added back to English II, Algebra I, and Biology starting in Fall 2012.</li> </ul>
2013–2014	<ul style="list-style-type: none"> <li>iPad and Chromebook administration was available for SR items in Summer 2013.</li> <li>iPad and Chromebook administration was available for PE/WPs starting in Fall 2013.</li> </ul>
2014–2015	<ul style="list-style-type: none"> <li>Physical Science was administered for the first time in Fall 2014.</li> <li>Changes occurred for English I, English II, Algebra I, Algebra II, and Geometry, including revised blueprints, new test forms, and alignment of existing items to the Missouri Learning Standards.</li> <li>Beginning in Fall 2014, English II, Algebra I, Algebra II, Biology, and Government are required and English I, Geometry, Physical Science, and American History are optional.</li> </ul>
2015–2016	<ul style="list-style-type: none"> <li>A new Biology RSS table was used to score students for the Spring 2016 administration following a recalibration study.</li> </ul>
2016–2017	<ul style="list-style-type: none"> <li>Student performance data revealed form comparability issues for the Algebra I and English II assessments. The results for these two tests were excluded from the federal accountability.</li> </ul>

For 2016–2017, the English II, Algebra I, Biology, and English I Assessments contained both selected-response (SR) items and performance events/writing prompts (PE/WPs). The Algebra II, Geometry, Government, American History, and Physical Science Assessments contained only SR items. An SR item presents students with a question followed by four response options. PEs are open-ended items that require students to perform more complicated tasks. A PE measures depth of understanding and interpretative and analytical abilities in a format that allows for more than one approach to arrive at a correct response. The advantage of this item type is that it provides insight into a student’s ability to apply knowledge and understanding in real-life situations. The WP, a special type of PE that appears in the English II Assessment, is an open-ended item that requires students to demonstrate their writing proficiency.

Testing for the MO EOC Assessments is conducted during three state-designated windows each year for summer, fall, and spring. These tests are designed to be administered in approximately one testing period and are not strictly timed. The 2016–2017 MO EOC Assessments were offered primarily in an online administration mode with Paper/Pencil, Braille, or Large Print forms available for students requiring accommodations.

### **1.3. Purpose and Intended Use of Test Scores**

According to the *Standards for Educational and Psychological Testing* (AERA, APA, and NCME, 2014), Standard 1.1 states that:

The test developer should set forth clearly how test scores are intended to be interpreted and consequently used. The population(s) for which a test is intended should be delimited clearly, and the construct or constructs that the test is intended to assess should be described clearly. (p. 23)

The Missouri State Board of Education identified the following purposes for the MO EOC Assessments:

- Measuring and reflecting students’ mastery toward post-secondary readiness
- Identifying students’ strengths and weaknesses
- Communicating expectations for all students
- Serving as the basis for state and national accountability plans
- Evaluating programs

The MO EOC Assessments assess the Missouri Learning Standards and were created to meet the needs of Missouri districts, schools, teachers, and students while also meeting state and federal requirements. Evidence of students’ progress in meeting the Missouri Learning Standards is obtained from the MO EOC Assessments. These assessments provide the data that DESE uses to inform students, parents, the public, and the state legislature about student performance to help make informed decisions about educational issues and to drive student services throughout the state.

The interpretative argument involves the interpretation of student performance in terms of individual achievement on the state standards and the conversion of these scores to performance levels (Kane, 2006). Student scores should facilitate proper interpretations while minimizing misinterpretations and unwarranted inferences. The intended interpretation of the MO EOC Assessment scores is that the scores indicate students’ progress toward mastering the Missouri Learning Standards. The MO EOC Assessments incorporate meaning of the test scores by anchoring the performance level cut scores to known scale score values.

The valid interpretation and appropriate use of MO EOC Assessment scores are supported in a variety of ways, including the training and consultation provided by personnel of DESE and publications such as the Test Administration Manual, Guide to Interpreting Results, and this technical report. The training and documentation provided to test users help them better administer, understand, and use test score results.

#### 1.4. Administration

Table 1.2 displays the 2016–2017 MO EOC testing windows. Each MO EOC Assessment is tailored to each EOC content area and is designed to be administered when a student has completed the content defined for that course. Multiple testing windows allow school districts the flexibility to schedule MO EOC testing as close as possible to the end of each course to provide students the greatest opportunity to demonstrate proficiency in the course content.

**Table 1.2. Testing Windows**

Test Period	Dates
Summer 2016	June 6 – Aug. 26, 2016
Fall 2016	Oct. 3, 2016 – Jan. 20, 2017
Spring 2017	Feb. 20 – May 26, 2017

Districts can offer EOC course content in any grade and in a variety of configurations. Although many districts offer EOC course content within a course bearing the same name, EOC course content can also be embedded within a course or across several courses. MO EOC Assessments are administered according to a "right test, right time" philosophy when students have completed the appropriate content.

#### 1.5. Reporting the Results

The MO EOC Assessment reports provide useful information for determining the performance of students in a particular school and classroom. These reports help identify students who are below Proficient in a particular test area so that the school may determine a course of action that will meet the students' specific needs. Districts may also use locally designed assessments aligned to the Missouri Learning Standards to provide more detailed information for each student in specific test areas.

Individual Student Reports (ISRs) and student raw scores are available to a district five business days after the close of their district testing window. Timely availability of score reports allows teachers the option to consider MO EOC Assessment results in assigning course grades. ISRs are only available in an online format unless an order is placed by the district for paper reports.

#### 1.6. Accountability

The U.S. Department of Education bases accountability on a school's achievement of annual measurable objectives (AMOs) in Reading/Language Arts and Mathematics. AMO determinations refer to the target percent proficient for each school and district during the course of one year. For Missouri schools and school districts, AMOs are set in terms of the percentage of all students, and all student groups of sufficient size, scoring Proficient or above on the required assessments, including English II and Algebra I. Following the TAC recommendation, DESE will not use the test results for the English II and Algebra I assessments for accountability purposes in 2016-17 due to form comparability issues. Further discussion is provided in Section 9.3.

In the 2008–2009 and 2009–2010 administration years, districts were required to administer the English II, Algebra I, and Biology Assessments to all students prior to graduation, unless students completed coursework prior to the operational administration of the assessments. In 2010–2011, Government was added to the list of required EOC Assessments. In 2012–2013 and 2013–2014, districts were required to administer the English II, Algebra I, Biology, English I, Government, and American History Assessments to all students prior to graduation. Beginning in Fall 2014, districts were required to administer the English II, Algebra I, Biology, and Government Assessments to all students prior to graduation. For students who completed the Algebra I Assessment prior to high school, Algebra II is the required high school mathematics assessment for accountability purposes.

Through the 2011–2012 administration year, Missouri reported English II, Algebra I, and Biology EOC scores in accordance with NCLB, which requires states to assess all students at least once in high school in Mathematics, English/Communication Arts, and Science. All students who took the MO EOC Assessments in English II, Algebra I, and/or Biology prior to entering high school were excluded from Missouri’s high school accountability data until they enrolled in high school. Their scores were “banked” until they actually reached high school, at which time they were rolled into the high school accountability data for that year. However, beginning with the 2012–2013 administration with the approved ESEA Flexibility Waiver, scores are no longer banked. Scores are considered for accountability purposes at the time the student is assessed and in the building that provided the instruction.

Data analyses included in this technical report are for the total assessed population, which includes students who have not yet reached the secondary level. The data analyses are based on a combination of assessment results and DESE-provided demographic criteria required under Missouri's approved ESEA Flexibility Waiver. Data for Physical Science are only included for Summer 2016 and Spring 2017 because no students took the Physical Science Assessment during the Fall 2016 administration.

### **1.7. Missouri’s Current Assessment System**

The current MAP system includes the following assessment components for elementary and middle school:

- Grades 3–8 Communication Arts
- Grades 3–8 Mathematics
- Grades 5 and 8 Science

The MO EOC Assessments include the following:

- English II
- Algebra I
- Biology
- English I
- Algebra II
- Geometry
- Government

- American History
- Physical Science

The statewide assessment program also currently includes the Missouri Assessment Program–Alternate (MAP-A) for students with severe cognitive disabilities, WIDA ACCESS for English language learners (ELLs), and a Personal Finance assessment for high school students who do not enroll in a personal finance course or who are receiving personal finance credit for embedded coursework.

### **1.8. History of the MO EOC Assessments**

In 1993, the Missouri legislature passed the Outstanding Schools Act (Senate Bill 380) requiring the Missouri State Board of Education to adopt challenging academic performance standards defining the skills and competencies necessary for students to successfully advance through the public school system, prepare for post-secondary education and the workplace, and participate as citizens in a democratic society. The Missouri State Board of Education formally adopted the academic standards known as the Show-Me Standards in January 1996.

These 73 standards are organized around four broad goals that address application, communication, problem-solving, and responsible decision-making. Thirty-three process standards emphasize the importance of engaging students of all ages in hands-on, active learning and integrating practical, challenging learning across all content areas. An additional 40 content standards define the academic skills and knowledge that provide the foundation for student learning in six content areas: Communication Arts, Mathematics, Science, Social Studies, Fine Arts, and Health/Physical Education. Content standards serve as the vehicle through which students demonstrate proficiency in the broader process standards. The Show-Me Standards are available for review on the Missouri Department of Elementary and Secondary Education (DESE) website at <http://dese.mo.gov/show-me-standards>.

In 2001, DESE developed Grade-Level Expectations (GLEs) to assist districts in articulating the Show-Me Standards across grade levels and content areas. GLEs were developed for Mathematics, Communication Arts, Science, Social Studies, Physical Education, Health, Music, Visual Arts, and Theater. In 2008, the high school GLEs were clustered into Course-Level Expectations (CLEs) to define content within typical high school courses of study in English, Mathematics, Social Studies, and Science. Archived GLEs and CLEs are available on the DESE website at <http://dese.mo.gov/college-career-readiness/curriculum/missouri-learning-standards>.

The MO EOC Assessments assess students' progress toward the Missouri Learning Standards, which are Missouri's content standards. The Missouri Learning Standards are aligned to the Show-Me Standards. They define the knowledge and skills students need in each grade level and course for success in college, other post-secondary training and careers. The Missouri Learning Standards include clearer, fewer and deeper expectations for English language arts and math, and literacy standards in other subjects. These standards help ensure students learn basic and higher-order skills, including problem solving and critical thinking. They give school administrators, teachers, parents and students a roadmap for learning expectations for each grade and course.

In addition to mandating the development of rigorous academic standards, the Outstanding Schools Act of 1993 also required the development and implementation of a comprehensive assessment program to measure student proficiency in the knowledge, skills, and competencies identified within the standards. Upon adoption of the standards in 1996, Missouri began developing the Missouri Assessment Program (MAP) in collaboration with contractor CTB/McGraw-Hill.

The Missouri State Board of Education adopted the purposes listed below to serve as guiding principles for developing the MAP:

- Improving students' acquisition of important knowledge, skills, and competencies
- Monitoring the performance of Missouri's educational system
- Empowering students and their families to improve their educational prospects
- Supporting the teaching and learning process

The first MAP assessments administered to students statewide were grade-span Mathematics assessments in grades 4, 8, and 10 in Spring 1998. A voluntary grade-span Communication Arts assessment for students in grades 3, 7, and 11 was also administered in Spring 1998 and became mandatory in Spring 1999. Required Science and Social Studies grade-span assessments (grades 3, 7, and 10, and grades 4, 8, and 11, respectively) were added to the program in subsequent years. A voluntary Health/Physical Education assessment was available in 2000 and was required until Spring 2002, and a Fine Arts assessment was field tested in 2001. Due to budget constraints, development of the Fine Arts assessment was suspended and the Health/Physical Education assessment was discontinued. Science and Social Studies grade-span assessments returned to voluntary status in Spring 2003. Social Studies assessments were discontinued in Spring 2008 and required assessments in Science were implemented in grades 5, 8, and 11 to comply with No Child Left Behind (NCLB) requirements.

Through the Spring 2005 administration, the MAP statewide assessment program included grade-span assessments in the following grade levels and content areas:

- Mathematics at grades 4, 8, and 10
- Communication Arts at grades 3, 7, and 11
- Science at grades 3, 7, and 10 (required Spring 1998 through Spring 2002; returned to voluntary status in Spring 2003)
- Social Studies at grades 4, 8, and 11 (required Spring 1999 through Spring 2002; returned to voluntary status in Spring 2003)

All MAP assessments included three types of items: selected-response (SR), constructed-response (CR), and performance events (PEs). For all content areas, MAP assessments included SR items from the TerraNova® Survey Edition. CR items and PEs were custom-developed with significant input from Missouri educators.

During the initial MAP development and implementation period, DESE developed two to four equivalent forms for each content area and grade-level assessment, using the first form for a voluntary testing cycle and administering the next form(s) in subsequent years. Early in the development phase, DESE tried out new items using separate field tests that usually occurred in

the fall of the school year. As the program continued, each test form contained embedded field-test items. Small-scale pilots continued as well.

As each content area and grade-level assessment was administered, DESE used the Bookmark method to set achievement levels, defining student performance through Spring 2005 as Advanced, Proficient, Nearing Proficiency, Progressing, or Step 1.

After nearly a decade of MAP administration, new federal and state legislation prompted change in the program. To comply with NCLB requirements, Missouri’s assessment program needed to incorporate Mathematics and Communication Arts assessments at all elementary and middle school grade levels (grades 3–8) and at one high school grade level. As a result, new grade-level assessments were developed for both content areas. These assessments were administered for the first time in Spring 2006.

Additional NCLB requirements necessitated the addition of a mandatory Science assessment once in the elementary grade range, once in the middle school grade range, and once in the high school grade range beginning in Spring 2008. The voluntary Science assessment in grades 3, 7, and 10 became a requirement and was moved to grades 5, 8, and 11. The voluntary Social Studies MAP assessment was eliminated following the Spring 2007 administration.

Missouri’s assessment system changed further in 2008–2009 when high school content area MAP assessments were replaced by the MO EOC Assessments. In 2008–2009, the MO EOC Assessments included English II, Algebra I, and Biology. In 2009–2010, the EOC Assessments in English I, Algebra II, Geometry, Government, American History, Integrated Mathematics II, and Integrated Mathematics III were added to the program. However, following the 2009–2010 administration year, the Integrated Mathematics II and Integrated Mathematics III Assessments were discontinued due to extremely low enrollment. Similarly, beginning in Summer 2010, PE/WPs were suspended from the English II, Algebra I, and Biology Assessments due to budget constraints but were added back in beginning with the Fall 2012 administration.

### 1.9. Organizational Support

DESE coordinates the development and implementation of the MO EOC Assessments. In addition to planning, scheduling, and directing all EOC activities, the staff is extensively involved in numerous test reviews, security, and quality assurance procedures. At the outset of the 2008 contract award, Riverside Publishing was the primary contractor working in partnership with Questar Assessment, Inc. (Questar), the Assessment Resource Center (ARC), Internet Testing Systems (ITS), Bookette, and others. Beginning with the Summer 2011 administration, DESE contracted operational activities with Questar. Table 1.3 summarizes the main activities for each group involved with the 2016–2017 MO EOC administrations.

**Table 1.3. Organizational Support**

Group	Responsibilities
<b>Questar Assessment, Inc. (Questar)</b>	<ul style="list-style-type: none"> <li>• Provide program management, including primary contact with DESE; coordinate all meetings; handle all administrative costs/activities; generate all program management reports and status reports</li> <li>• Create and update the Test Administration Manual, Software Installation Guides, and other ancillary materials</li> </ul>

<b>Group</b>	<b>Responsibilities</b>
	<ul style="list-style-type: none"> <li>• Conduct psychometric analyses, reporting, linking/equating studies, and associated tasks</li> <li>• Provide all needed prepress work for program materials through camera-ready art</li> <li>• Produce all materials, including online, Paper/Pencil, Braille, and Large Print versions of the test, as well as online testing tools and content area-specific tutorials</li> <li>• Account for secure test books received after testing</li> <li>• Provide a direct customer service line, including technical support and general support to the program and customer interactions</li> <li>• Store materials after testing</li> </ul>
<b>Questar Assessment, Inc. (Questar)</b>	<ul style="list-style-type: none"> <li>• Participate in and present at Technical Advisory Committee (TAC) meetings</li> <li>• Score all SR items and the PE/WPs</li> <li>• Produce and distribute all score reports and the Guide for Interpreting Results</li> <li>• Complete the technical report for DESE</li> <li>• Provide online enrollment and pre-ID system for use by Missouri districts</li> <li>• Provide online testing interface and online test administration site</li> <li>• Package and distribute materials</li> <li>• Barcode test books with security IDs</li> </ul>
<b>Districts</b>	<ul style="list-style-type: none"> <li>• Distribute materials to the school buildings, track all secure materials, and promptly return all materials, including transcribed test forms, for scoring</li> <li>• Assist in the timely resolution of scoring alerts</li> <li>• Act as a liaison between Questar and buildings</li> </ul>
<b>School Buildings</b>	<ul style="list-style-type: none"> <li>• Administer tests, track all secure materials, and promptly return materials to districts for scoring</li> </ul>
<b>American Printing House for the Blind (APH)</b>	<ul style="list-style-type: none"> <li>• Print both Braille and Large Print versions</li> </ul>

## Chapter 2: Test Development

### 2.1. Introduction

All the EOC tests were intact forms previously administered in other testing administrations. Most recently, beginning in Fall 2014, new test forms were developed for English I, English II, Algebra I, Algebra II, and Geometry for the following reasons:

- Revised test blueprints
- New test forms
- Alignment of existing items in English Language Arts and Mathematics to the Missouri Learning Standards
- New scoring rubrics for PEs and change of PE scores
- Change of test length and total score points
- Addition of PEs to English I
- Updated ALDs

According to the *Standards for Educational and Psychological Testing* (AERA, APA, & NCME, 2014), “Important validity evidence can be obtained from an analysis of the relationship between the content of a test and the construct it is intended to measure” (p. 14). Accordingly, the descriptions of the test development procedures included in the MO EOC technical reports provide validity evidence of the MO EOC Assessments. Documentation of test development from previous administrations, including the test designs, can be found in previous technical reports, located on DESE’s website at <http://dese.mo.gov/college-career-readiness/assessment/assessment-technical-support-materials>.

### 2.2. Test Blueprints

Test blueprints specify the relative percentage of items in each high-level content strand. Tables 2.1 – 2.9 provide the Summer 2016, Fall 2016, and Spring 2017 test construction blueprints for English II, Algebra I, Biology, English I, Algebra II, Geometry, Government, American History, and Physical Science.

**Table 2.1. Test Construction Blueprint—English II**

Claim	Category	Big Idea	Target #Points	Point Range	Range of Emphasis
Reading	Claim 1a	Apply reading skills to demonstrate the ability to integrate key ideas and details, interpret and analyze the craft and structure of texts, and evaluate the knowledge and ideas found in literary texts	15	15	33%
Reading	Claim 1b	Apply reading skills to demonstrate the ability to integrate key ideas and details, interpret and analyze the craft and structure of texts, and evaluate the knowledge and ideas found in informational text	15	15	33%

Claim	Category	Big Idea	Target #Points	Point Range	Range of Emphasis
Writing	Claim 2a	Demonstrate the ability to produce a variety of text types and purposes	10	10	22%
Writing	Claim 2b	Demonstrate a command of the convention of standard English, appropriate grade-level acquisition of vocabulary	5	5	11%
<b>Total</b>			45	45	100%

**Table 2.2. Test Construction Blueprint—Algebra I**

Content Strand	Target #Points	Point Range	Range of Emphasis
Number and Quantity	3	2–4	5–10%
Algebra	17	14–21	35–53%
Functions	15	11–20	28–50%
Stats and Probability	5	3–6	8–15%
<b>Total</b>	40	40	100%

**Table 2.3. Test Construction Blueprint—Biology**

Content Strand	Target #Points	Point Range	Target % Total	Minimum Emphasis	Maximum Emphasis
Characteristic and Interactions of Living Organisms	22	20–24	40%	36%	44%
Changes in Ecosystems and Interactions of Organisms with Their Environments	13	12–14	24%	22%	27%
Scientific Inquiry	20	20	36%	36%	36%
<b>Total</b>	55	--	100%	--	--

Note: Total score points for the operational tests may vary depending on which PE prompts are selected for a particular administration. Regardless of the total score points on a particular operational test, the percentage of total score points from each content strand (emphasis) will fall within the blueprint range described above. Point ranges are determined using a 10 percent tolerance.

This blueprint was built under the following assumptions:

1. The operational test will have two sessions. Session I will have 35 1-point SR items, and Session II will have one 20-point PE that is comprised of a main context and several prompts.
2. Prompts within PEs will be aligned to CLEs from the Scientific Inquiry strand only.

**Table 2.4. Test Construction Blueprint—English I**

Claim	Category	Big Idea	Target #Points	Point Range	Range of Emphasis
Reading	Claim 1a	Apply reading skills to demonstrate the ability to integrate key ideas and details, interpret and analyze the craft and structure of texts, and evaluate the knowledge and ideas found in literary texts	15	15	33%
Reading	Claim 1b	Apply reading skills to demonstrate the ability to integrate key ideas and details, interpret and analyze the craft and structure of texts, and evaluate the knowledge and ideas found in informational text	15	15	33%
Writing	Claim 2a	Demonstrate the ability to produce a variety of text types and purposes	10	10	22%
Writing	Claim 2b	Demonstrate a command of the convention of standard English, appropriate grade-level acquisition of vocabulary	5	5	11%
<b>Total</b>			45	45	100%

**Table 2.5. Test Construction Blueprint—Algebra II**

Content Strand	Target #Points	Point Range	Range of Emphasis
Number and Quantity	0	0–4	0–10%
Algebra	17	16–22	40–55%
Functions	23	18–24	45–60%
Stats and Probability	0	0–6	0–15%
<b>Total</b>	40	40	100%

**Table 2.6. Test Construction Blueprint—Geometry**

Content Strand	Point Range	Range of Emphasis
Geometry	34–40	85–100%
Stats and Probability	0–6	0–15%
<b>Total</b>	40	100%

**Table 2.7. Test Construction Blueprint—Government**

Content Strand	Target #Points	Point Range*	Target % Total	Minimum Emphasis	Maximum Emphasis
Principles of Constitutional Democracy	20	18–22	50%	45%	55%
Principles and Processes of Governance Systems	20	18–22	50%	45%	55%
<b>Total</b>	40	40	100%	--	--

\*Point ranges are determined using a 10 percent tolerance.

**Table 2.8. Test Construction Blueprint—American History**

Content Strand	Target #Points	Point Range*	Target % Total	Minimum Emphasis	Maximum Emphasis
Government	8	7–9	20%	18%	23%
History	16	14–18	40%	35%	45%
Economics	8	7–9	20%	18%	23%
Geography	8	7–9	20%	18%	23%
<b>Total</b>	40	40	100%	--	--

\*Point ranges are determined using a 10 percent tolerance.

**Table 2.9. Test Construction Blueprint—Physical Science**

Content Strand	Point Range	Range of Emphasis
Properties and Principles of Matter and Energy	25–30	55–66%
Properties and Principle of Force and Motion	15–20	33–44%
<b>Total</b>	40	100%

### 2.3. Test Specifications

Standard 1.11<sup>2</sup> addresses the appropriateness of test content and its relationship to a solid validity argument. Additionally, Standard 4.2<sup>3</sup> defines test specifications and provides examples of the type of information that should be included in a specifications document. The test specifications describe the content and format of the test and delineate the ideal number of items and points assessed for each standard.

<sup>2</sup> **Standard 1.11:** When the rationale for test score interpretation for a given use rests in part on the appropriateness of test content, the procedures followed in specifying and generating test content should be described and justified with reference to the intended population to be tested and the construct the test is intended to measure or the domain it is intended to represent. If the definition of the content sampled incorporates criteria such as importance, frequency, or criticality, these criteria should also be clearly explained and justified (p. 26).

<sup>3</sup> **Standard 4.2:** In addition to describing intended uses of the test, the test specifications should define the content of the test, the proposed test length, the item formats, the desired psychometric properties of the test items and the test, and the ordering of items and sections. Test specifications should also specify the amount of time allowed for testing; directions for the test takers; procedures to be used for test administration, including permissible variations; any materials to be used; and scoring and reporting procedures. Specifications for computer-based tests should include a description of any hardware and software requirements (p. 85–86).

Appendix A contains the 2016–2017 target point distributions. Appendix B contains the actual point distributions. Details on the development and use of the test specification documents for previous MO EOC test forms can be found in previous technical reports on DESE’s website at <http://dese.mo.gov/college-career-readiness/assessment/assessment-technical-support-materials>.

The following is an overview of the 2016–2017 test specifications:

- **English II**
  - The English II Assessment has 35 SR items and 3 WPs with a score range from 2–4.
  
- **Algebra I**
  - The Algebra I Assessment measures student achievement in the following content strands:
    - Number and Quantity
    - Algebra
    - Functions
    - Statistics and Probability
  
  - The 40 SR items are aligned to the strands listed above. Four PEs are aligned to Algebra. The score for the PEs ranges from 1–4 and is scored on an item-specific rubric.
  
- **Biology**
  - The Biology Assessment measures student achievement in the following content and process strands:
    - Characteristics and Interactions of Living Organisms
    - Changes in Ecosystems and Interactions of Organisms with Their Environments
    - Scientific Inquiry
  
  - The 35 SR items in Session I are aligned to the two strands listed above. Session II contains a PE aligned to the Scientific Inquiry strand, in which the student is required to respond to several CR items. The student may be asked to construct a data table, measure, and/or graph scientific results. Individual items within the PE may be worth 1, 2, 3, or 4 points and are scored on item-specific rubrics. The total point value of each operational PE is 20 points.
  
- **English I**
  - The English I Assessment has 35 SR items and 3 WPs with a score range from 2–4.
  
- **Algebra II**
  - The Algebra II Assessment measures student achievement in the following content strands:
    - Number and Quantity

- Algebra
  - Functions
  - Statistics and Probability
- The 40 SR items are aligned to two strands, Algebra and Functions.
- **Geometry**
  - The Geometry Assessment measures student achievement in the following content strands:
    - Geometry
    - Statistics and Probability
  - The 40 SR items are aligned to Geometry.
- **Government**
  - The Government Assessment measures a student’s ability to understand our history and participate in our civic life as citizens and consumers. The Government forms consist of 40 SR items that are aligned to the following strands:
    - Principles of Constitutional Democracy
    - Principles and Processes of Governance Systems
- **American History**
  - The American History Assessment measures a student’s ability to understand U.S. history and participate in U.S. civic life as citizens and consumers. The American History forms consist of 40 SR items that are aligned to the Missouri, United States, and World History strand. Individual CLEs within that strand report out to the following categories:
    - History
    - Government
    - Economics
    - Geography
- **Physical Science**
  - The Physical Science Assessment measures student achievement in the following content and process strands:
    - Properties and Principles of Matter and Energy
    - Properties and Principles of Force and Motion
  - The 45 SR items are aligned to the two strands listed above.

#### **2.4. Item Development**

The process of constructing the tests that were administered in 2016-2017 is discussed in this section. Specifically, historical information regarding both item-development procedures and content coverage from Riverside Publishing is presented. Content-related evidence of validity that supports test interpretation is presented in terms of how the MO EOC Assessments were assembled.

Riverside Publishing test development specialists created a detailed item and passage development plan based on the blueprints for each content area. The plans included the number of items necessary for each assessed CLE and an outline of the review process for developed items and passages. This process included internal Riverside Publishing reviews, DESE item review, and a content and bias review by Missouri educators.

The forms for the Fall 2008 through the Spring 2017 administrations were constructed using items field tested in Spring 2008, 2009, and 2010. During the process of building the forms for the operational test administrations, statistical characteristics (i.e.,  $p$ -values and point-biserial correlations) were used to evaluate the items and test forms. The goal was to construct operational test forms that were similar within each content area. However, the student performance data for the Spring 2017 indicated that the forms administered for English II and Algebra I were more difficult than the forms administered in the previous Spring. Further details are provided in Section 9.3. The English and Mathematics forms for 2016-17 assessed the old standards and will not be used moving forward. Forms that assess the new standards are being developed for 2017-18 and subsequent years for English I, English II, Algebra I, Algebra II, and Geometry. During this process, steps will be taken to ensure form comparability by using strong test design methodology, anchor sets, and equating strategies that are consistent with best practices.

#### *2.4.1. Item Writing*

Missouri educators, DESE staff members, Regional Instructional Facilitators (curriculum and assessment specialists housed in each of Missouri's nine Regional Professional Development Centers), and Riverside Publishing test development specialists created all the test items, including the PEs. English II passages and WPs and English I passages were developed by item writers trained by Riverside Publishing, Riverside Publishing test development specialists, and DESE staff. These passages were developed and refined prior to the item-writing workshops. Requirements to be an item writer included experience in classroom teaching and expert content knowledge.

In September 2007 and June 2008, Riverside Publishing conducted item-writing workshops to develop SR items for English II, Algebra I, and Biology as well as PEs for Algebra I and Biology. In January 2008, Riverside Publishing conducted item-writing workshops to develop SR items for Algebra II, Geometry, Government, and American History. These workshops were conducted at the Assessment Resource Center (ARC) in Columbia, MO. Participants in the workshops included Missouri educators, DESE staff, Regional Instructional Facilitators, and Riverside Publishing test development specialists. The workshops were held over a five-day period and were conducted with 15–20 teacher participants per content area. Teacher participants were selected by DESE to represent school districts throughout Missouri. The content developed at the workshops was based on the Missouri Show-Me Standards and CLEs.

The English II participants wrote SR items associated with the passages that had been developed prior to the item-writing workshops. The Algebra I and Biology participants wrote SR items and PEs along with rubrics. Biology PEs consist of a science investigation scenario and several associated CR items and were written based on an existing Science PE development template that specified the types of tasks and numbers of items that compose a PE.

In March 2008, Riverside Publishing conducted item-writing workshops to develop SR items for English I. English I participants wrote SR items associated with the passages that had been developed prior to the item-writing workshops.

During the item-writing workshops, Riverside Publishing test development specialists conducted training sessions with the item writers and provided instructions on avoiding bias and stereotyping of groups and individuals based on gender, race, ethnicity, religion, age, language, socioeconomic group, and disability. Riverside Publishing test development specialists also trained item writers to write items that adhere to the principles of universal design, making the items accessible to the widest range of students. For example, items and passages were written using clear and concise language, and all art, graphs, and tables were labeled and were not overly crowded with extraneous information. Instruction was also provided on developing items at particular cognitive levels based on Norman Webb's DOK levels.

Riverside Publishing test development specialists trained item writers to enter content into the company's electronic content management system. During training, each item writer wrote several items and received feedback on them. Participants also received feedback through the content management system as Riverside Publishing test development specialists responded to teachers' items as they were submitted. As items were produced, they were continuously reviewed, revised, edited, and evaluated by Riverside Publishing test development specialists and DESE staff. Item writers who generated high-quality work on or ahead of schedule were given additional assignments.

As items were written, they were tracked according to the item development plan. Riverside Publishing kept records to maintain a workflow that generated items in assessment strands and CLEs as required by the test blueprint. All items and passages went through several rounds of internal reviews, including content and editorial reviews. Riverside Publishing test development specialists reviewed each item with respect to alignment, clarity, and correspondence with item specifications.

#### *2.4.2. Universal Design*

Riverside Publishing test development specialists were experienced in employing the principles of universal design in item development so that all students have equal access to the assessments. Riverside Publishing included these principles when training Missouri teachers to write the items.

According to the NCEO Synthesis Report 44 (Thompson, Johnstone, & Thurlow, 2002) universally designed assessments have seven elements:

1. Inclusive assessment population
2. Precisely defined constructs
3. Accessible, nonbiased items
4. Amenable to accommodations
5. Simple, clear, and intuitive instructions and procedures
6. Maximum readability and comprehensibility
7. Maximum legibility

All items for the MO EOC Assessments were developed with these elements in mind. Riverside Publishing ensured the development of MO EOC items in accordance with these principles in the following manner:

- Items were developed to include a wide array of contexts and cultures. These item types may make students feel more included, increase motivation, and avoid bias.
- The test and item specifications served as a model for precisely defining the constructs that the tests would measure. These specifications indicated to the item writer, content reviewer, and test development specialists exactly what was to be measured. The item could assess a particular part of a standard or a combination of elements within a standard. The reviews served as a method for eliminating items that included assessment of knowledge outside the standard. For example, a Mathematics item should have nonmathematical vocabulary below grade level, otherwise the item might also be assessing reading ability, introducing construct-irrelevant variance.
- The review of items, which included Missouri teachers from diverse ethnic and geographic backgrounds, served to ensure that all items were accessible to as many students as possible.
- Riverside Publishing staff members trained Missouri teachers to create clear and simple instructions so that students would have a clear understanding of the task needed to answer an item. Teacher review committees had an opportunity to review the instructions to ensure that they were appropriate for the grade levels and content areas. To ensure the appropriateness of the level of the vocabulary, *Children’s Writer’s Word Book* and *EDL Core Vocabulary* were employed by test developers and item review committees.
- Finally, items with text, art, tables, maps, and diagrams were constructed with maximum legibility.

#### *2.4.3. Content and Bias Review Process*

Standard 4.8<sup>4</sup> addresses the importance of item review by an examination of the item statistics and the use of expert panels of judges. This section details the steps taken to ensure that the items chosen for the operational forms of the MO EOC Assessments were of high technical quality and were free from bias. Content and bias reviews were conducted in November 2007 and July 2008 in Columbia, MO. The content review committees included DESE staff, Missouri educators from around the state, Regional Instructional Facilitators, and Riverside Publishing staff.

The content and bias review committees reviewed SR items and PE/WPs using the following criteria:

- Overall quality and syntactical clarity

---

<sup>4</sup> **Standard 4.8:** The test review process should include empirical analyses and/or the use of expert judges to review items and scoring criteria. When expert judges are used, their qualifications, relevant experiences, and demographic characteristics should be documented, along with instructions and training in the item review process that the judges receive (p. 88).

- Content coverage and content appropriateness
- Alignment to the specified CLE
- Appropriate contexts
- One clearly correct answer and plausible distractors for SR items
- Freedom from bias or any racial, socioeconomic, gender, or other sensitivity issues

The bias review committee was held separately from the content review committee and focused on reviewing items on the last criterion above. Suggestions from the bias review committee were then shared with the content review committee for their review and a determination on how to incorporate the edits.

Before reviewing the items, a group training session was held with all committee members. Riverside Publishing presented a PowerPoint that described the MO EOC program, the test development process, and the content and bias review procedures. After the large-group session, the committee members went to their respective break-out rooms to discuss the week's activities in more detail. The committee members were provided with copies of the CLEs and item specifications for the courses for the items they were to review. Each Riverside Publishing content facilitator reviewed these documents with the committee and answered any questions. The committee members were given the following checklists that could be referenced throughout the review process:

For SR items:

- Does the item assess the assigned CLE?
- Is the item clear, concise, and complete?
- Does the item contain accurate and sufficient content information?
- Is the item grade-level appropriate, and are the vocabulary and syntax appropriate for the students at the intended grade? (Reference the EDL Core Vocabularies.)
- Is the item fair to all students and free of bias and sensitivity issues?
- Does the item have correct punctuation, and is it grammatically correct?
- Is the item free from spelling and typographical errors?
- Is clueing avoided within an item stem and options, as well as among items?
- Does the item stand alone? (The answer to one item should not be dependent on the content of another item.)
- Are the equations, tables, charts, graphs, and other art clear, accurate, and necessary?
- Does the item have only one correct answer?
- Does the item have unique, plausible distractors containing common errors students would make?
- Are all the options parallel in form and arranged in logical order?
- Do all distractors contain clear rationale statements? (Mathematics and Science only)
- Is the item free from absolutes (“none of the above,” “all of the above”) as options and free from the use of negatives (“not,” “none,” “except”) in the stem?
- Does the item avoid repeating words from the stem in the options?
- Does the item pose a single problem (although the solution may require more than one step)?

For PE/WPs:

- Does the item assess the assigned CLE?
- Does the item clearly specify how the student should respond?
- Does the item allow for a variety of acceptable responses for the student to get full credit?
- Is the item grade-level appropriate, and are the vocabulary and syntax appropriate for the students at the intended grade? (Reference the EDL Core Vocabularies.)
- Is the item rich enough to elicit an appropriate range of responses covering all possible score points?
- Is the item fair to all students and free of bias and sensitivity issues?
- Does the rubric clearly define an acceptable answer or answers at each score point level?

Missouri educators participated in the review process for each content area. The committee members read and reviewed each item. Discussions were held about whether the items met the criteria listed above. The committees then rejected or revised any items they deemed unsatisfactory. If there was disagreement about how to proceed with an item, the Riverside Publishing facilitator polled the group and followed the direction of the majority. Between approximately 95% and 98% of the items were accepted (as-is or with edits) by the content and bias committees. Tables 2.10 and 2.11 show the number of items reviewed in 2007 and 2008, respectively. The accepted items in Table 2.10 were placed in a pool of items from which the 2008 standalone field-test forms were built. The accepted items in Table 2.11 were placed on EFT forms in the 2009 operational administrations.

To further preserve validity, all item review sessions were held in secure meeting rooms, and all materials were confidential. Committee members were required to sign confidentiality agreements so that the integrity of the test content was not compromised. Although educators were encouraged to share information with their colleagues about the process of the item review, they were made fully aware of the expectation that any information about specific items and passages was to remain secure and confidential.

**Table 2.10. 2007 Content/Bias Item Review Acceptance Rates**

Content Area	Total #Items Presented for Review	#Items Accepted (as-is or with edits)	Acceptance Rate (items accepted as-is or with edits)
English II	404	398	99%
Algebra I	239	233	97%
Biology	402	365	91%

**Table 2.11. 2008 Content/Bias Item Review Acceptance Rates**

Content Area	Total #Items Presented for Review	#Items Accepted (as-is or with edits)	Acceptance Rate (items accepted as-is or with edits)
English II	298	298	100%
Algebra I	288	288	100%
Biology	164	161	98%
English I	669	669	100%

<b>Content Area</b>	<b>Total #Items Presented for Review</b>	<b>#Items Accepted (as-is or with edits)</b>	<b>Acceptance Rate (items accepted as-is or with edits)</b>
Algebra II	490	488	99.5%
Geometry	488	471	97%
Government	492	474	96%
Am. History	494	470	95%

## **2.5. Form Construction**

### *2.5.1. Field-Test Selection and Administration*

The items accepted at the content/bias review were used to build the standalone field-test forms administered in Spring 2008 and Spring 2009. Field-test items were selected so that each form met the established operational blueprint requirements for content coverage as closely as possible. For any standalone field-test form that deviated slightly from the blueprint, another field-test form made up for that difference so that the entire pool of field-tested items met the blueprint requirements.

The MO EOC Spring 2008 field test consisted of 10 SR forms per course, 10 English II WPs, 10 Algebra I PE forms, and 10 Biology PE forms. All field-test forms were reviewed and approved by DESE.

The MO EOC Spring 2009 field test consisted of 10 SR forms of 36 items each for Algebra II, Geometry, Government, and American History. English I field tested 14 unique forms with 36 items on each form. All field-test forms were reviewed and approved by DESE. Both standalone field tests were census tests of all students enrolled in courses corresponding to the MO EOC Assessments. The forms for each course were spiraled at the student level across the state.

### *2.5.2. Statistical Item Review*

After completion of the 2008 field-test item scoring and again after completion of the 2009 field-test item scoring, Riverside Publishing test development specialists and psychometricians reviewed the statistical characteristics of the items. Riverside Publishing used classical item statistics, including n-counts, *p*-values, percentage choosing each response option, point-biserial correlations, and differential item functioning (DIF) analysis for the SR items.

During the data review, Riverside Publishing Research and Test Development staff and DESE staff reviewed student performance on the Spring 2008 field-test items for English II, Algebra I, and Biology and on the Spring 2009 field-test items for English I, Algebra II, Geometry, Government, and American History. Items were reviewed regarding their statistical characteristics. Item reviewers from DESE and Riverside Publishing were provided with the following information:

- Form
- Position
- Item as it appeared in the printed books
- Item alignment to the Missouri Show-Me Standards

- The  $p$ -value of the correct answer and percentage of students who selected each distractor (for SR items only)
- Mean and SD of item score (for PE/WPs only)
- Point-biserial correlation of correct response and point-biserial for each distractor (for SR items only)
- Total number of students who attempted to answer each question
- DIF using the Mantel-Haenszel (MH) (1959) procedure and the Educational Testing Service (ETS) classification (for SR items only)

Riverside Publishing and DESE staff reviewed items that were flagged because of statistics that fell outside the parameters determined by the Riverside Publishing Research staff. Table 2.12 contains the guidelines that were used for data review.

**Table 2.12. Criteria for Flagged Items**

Item Flagging Criteria	Indicates
If $p$ -value of keyed response $< 0.35$	Difficult item
If $p$ -value of keyed response $> 0.95$	Easy item
If $p$ -value of keyed response $< p$ -value of distractor	Possible miskey
If $p$ -value of distractor $> 0.35$	Possible second correct option
If point-biserial of keyed response $< 0.20$	Poorly discriminating item
If point-biserial of a distractor is $> 0.00$	Possible second correct option
If ETS classification is B or C (from DIF analysis)	Possible bias in item

Each flagged item was reviewed, and then Riverside Publishing and DESE decided whether the item should be accepted or rejected. The review included items flagged with moderate to severe DIF (an ETS classification of B or C). A flagged item was accepted if the review team determined that the item was strong and tested students on content they were expected to know. Accepted items were then made available in the pool of items that could be used to create the operational forms. Items the review team felt were biased or inappropriate for the MO EOC Assessments were rejected. Rejected items were removed from the item pool, making them invalid for the MO EOC Assessments. Of the 690 total items reviewed for English II, Algebra I, and Biology, 91% were accepted. Of the 2,233 total items reviewed for English I, Algebra II, Geometry, Government, and American History, 93% were accepted.

### 2.5.3. Operational Test Selection and Administration

Riverside Publishing test development specialists selected operational items for test forms for use in each administration cycle. Using IRT item difficulty values, six equivalent operational forms and one released form were selected for each content area. The operational forms are administered in the summer, fall, and spring of each administration cycle according to a prescribed form rotation schedule.

The operational forms construction process was based on content requirements and statistical criteria. The steps associated with assembling the test forms included the following:

1. Determine form design. Each form includes item positions for operational items, field-test items, and/or linking items. Embedded field testing was discontinued in 2010–2011 due to budget constraints, and from 2010–2011 forward, field-test positions were occupied by field-test items that had been previously administered and scored.
2. Select items that meet content specifications. Each form was constructed based on the test specifications for that content area. The test specifications delineate the item distribution across assessment strands. They also outline the test length, type of items, and number of points to be assessed at each CLE.
3. Evaluate statistical specifications and select items to meet these specifications. Spreadsheets (form matrices) are used to ensure that the test forms meet statistical specifications. These matrices contain the following statistics: average  $p$ -values, point-biserial correlations, and DIF statistics. Riverside Publishing psychometricians conducted a review of the test forms to ensure equivalence of test difficulty across forms.
4. Review and approve test forms. Once the content and statistical specifications were met for each content area, the forms were reviewed and approved by DESE. The forms were then released for production and additional content and editorial reviews.<sup>5</sup>

## 2.6. Braille and Large Print Versions

Beyond employing the principles of universal design, all operational assessments were offered in Braille and Large Print versions for visually impaired students taking the MO EOC Assessments. To accommodate these students, two operational Paper/Pencil versions of each assessment were converted into Braille and Large Print as follows:

- English II, Algebra I, and Biology: Fall 2008 and Spring 2009
- English I, Algebra II, Geometry, Government, and American History: Fall 2009 and Spring 2013

Once the Braille and Large Print forms were created for each assessment, reviews were held with educators from Missouri who had specialized training in working with visually impaired students.

A Large Print form review for English II, Algebra I, and Biology was held in Jefferson City, MO, at the DESE offices on Sept. 29, 2008. A Braille review was held in St. Louis, MO, at the Missouri School for the Blind on Oct. 10, 2008. Braille and Large Print reviews for English I, Algebra II, Geometry, Government, and American History were held on Sept. 17 and 18, 2009, and on March 26, 2013. The Braille and Large Print reviews for Physical Science were held on February 5–6, 2015, in Jefferson City, MO.

The teachers consulted the Large Print and Braille Style Guide, which was also used during form composition, and relied on their own expertise to determine whether changes to directions, passages, or items were needed, or whether items should be omitted. Riverside Publishing Braille

---

<sup>5</sup> Rasch values were not available for all items when the 2008–2009 operational forms were built.

vendor (Region IV) also reviewed the forms and made recommendations based on how items, passages, and directions would be transcribed to Braille.

Riverside Publishing and DESE reviewed the recommendations from all of these sources. It was determined that no items had to be omitted to accommodate Large Print students. For the Braille version of the form, one item from English II, one item from English I, and three items from Geometry were removed because the content of the item prohibited transcription to Braille. Students taking the Braille form were given credit for these items. The EFT items were eliminated from both versions of these forms due to the irregular testing conditions and the small sample sizes for these groups. For English II, Algebra I, and Biology, the two Braille and Large Print test versions were alternated in each administration cycle through the Spring 2014 administration. For English I, Algebra II, Geometry, Government, and American History, the first Braille and Large Print test versions to be selected were used for each operational administration since 2009–2010. The second form was used in Fall 2013 and Spring 2014. For 2016–2017, a single Braille and Large Print test version was used for all MO EOC assessments except Government, where two forms alternated across the three administrations.

## **2.7. Online Forms Construction**

All items were field tested in Paper/Pencil format, and all test forms were originally developed for administration in either Paper/Pencil or online format. All items were written so that they could be presented in an online delivery system without any alterations. In 2008–2009 and 2009–2010, school districts could select either a Paper/Pencil administration or online administration for all EOC Assessments. In 2010–2011, Missouri began moving toward a full implementation of online administration of all MO EOC Assessments. English I, Algebra II, Geometry, Government, and American History were available only for online administration, whereas English II, Algebra I, and Biology continued to be available in both online and Paper/Pencil. To assist in a smooth transition to online administration of all MO EOC Assessments without interruption of data trends, Riverside Publishing completed an online comparability study of the MO EOC Assessments (see the *2013–2014 MO EOC Technical Report*, Appendix C, for the full report). Based on the results of the study, the MO TAC reached a consensus that the move from paper/pencil to online administration would not affect student performance.

Beginning in 2011–2012, Questar was tasked with moving all MO EOC Assessments to an online delivery platform (with the exception of the Paper/Pencil, Braille, and Large Print test forms for students needing such accommodations). More information on the current online test administration can be found in Chapter 5.

## **2.8. Quality Control for Form Construction**

Checklists and quality control procedures accompanied each stage of form construction. Following is a list of some quality control procedures used during the assembly of the MO EOC Assessment forms:

- Construct forms based on all content requirements noted in the test blueprint and test specifications.
- Verify correct number of items per standard or reporting category based on test blueprint.
- Review items to ensure a wide sampling of the knowledge and skills being measured.

- Ensure that all items have been through the appropriate review procedures and are approved for use by DESE.
- Check for a variety of item topics, equal distribution of males and females, ethnicities, etc.
- Verify appropriate portions of items with and without artwork.
- Check for clueing across all items on each form.
- Verify equal or nearly equal distribution of answer choices for SR items.
- Ensure that the test meets the required statistical specifications (i.e., that as many items as possible have  $p$ -values between 0.35 and 0.90 and as many items as possible have point-biserial correlations above 0.20).
- Consider any statistical flags or problems.
- Check statistics to ensure that the collection of items on a given form yields an overall difficulty that falls within the specified range.
- Verify that items have not been released to the public.
- Verify correct answer key for each item.
- Perform content review of form (senior staff).
- Perform statistical review of form (psychometrician/statistician).
- Send form to DESE for review and approval.

## **2.9. Summary**

The MO EOC Assessments provide an indication of student progress toward achieving the knowledge and skills identified in the Missouri Learning Standards. Just as the content standards guided the item development and selection process, the consideration of content played an equally important role in form development. Form development required a balance of both content coverage and item difficulty. As items were selected for inclusion on particular forms, every effort was made to balance the content coverage to ensure the items aligned to the content standards being assessed while simultaneously considering the overall difficulty of the forms.

## Chapter 3: Standard Setting

### 3.1. Introduction

As shown below, standard setting workshops for the MO EOC Assessments were conducted in 2008, 2009, and 2015. A cutpoint validation workshop was also conducted in 2015.

- The 2008 standard setting applied to English II, Algebra I, and Biology.
- The 2009 standard setting applied to English I, Algebra II, Geometry, Government, and American History.
- The 2015 standard setting applied to Physical Science.
- The 2015 cutpoint validation applied to English I, English II, Algebra I, Algebra II, and Geometry.

One purpose of assessment is to establish clear guidelines for educational decision-making. By assigning meaning to test scores, standard setting allows policymakers, administrators, teachers, parents, and students to make statements about the level of proficiency of individual students and groups of students. Important information from the 2015 standard setting and cutpoint validation events is provided because the cut scores established at the workshops were applied to the 2015–2016 test scores. For more detailed information on the 2015 standard setting and cutpoint validation, see Chapter 4 in the *2014–2015 MO EOC Technical Report* at <http://dese.mo.gov/college-career-readiness/assessment/assessment-technical-support-materials>. For information on the 2008 and 2009 standard settings, see Chapter 3 of the *2009–2010 MO EOC Phase I and Phase II Technical Reports*.

### 3.2. 2015 Standard Setting

Physical Science was administered for the first time in Fall 2014. A standard setting in February 2015 took place to establish recommended cut scores using the Angoff method. The main goal of the 2015 standard setting was to establish three cut scores for the Physical Science MO EOC Assessment:

1. The cut score that differentiates Below Basic performance from Basic performance
2. The cut score that differentiates Basic performance from Proficient performance
3. The cut score that differentiates Proficient performance from Advanced performance

The final standard setting report for Physical Science is provided in the *2014–2015 MO EOC Technical Report*.

The Angoff method required panelists to estimate the percentage of students meeting the borderline definition that would respond correctly to each item. Panelists then estimated that percentage for every borderline student definition (i.e., panelists had to estimate these percentages for each cut score recommendation). The overall recommended cut score was computed from the expected scores for individual items.

### 3.2.1. Panelists

Seven panelists participated in the 2015 standard setting workshop for Physical Science. Panelists included classroom teachers who taught Physical Science, Biology and Chemistry in Missouri schools; had administered the MO EOC Assessments in their respective content area; and were familiar with the standards.

### 3.2.2. Staffing

Questar provided staff members experienced in conducting standard setting to facilitate the panelist group. The facilitator was experienced with the Angoff and modified Angoff methods, and all panelists were trained on the method prior to implementation with ample time for any questions to be addressed. Psychometricians and a statistical analyst attended the workshop to assist with data analysis, oversee data quality control, and observe the activities. A Questar program manager was present to serve as a resource for questions related to the meeting logistics. DESE was also available during the standard setting workshop.

### 3.2.3. Development of Achievement Level Descriptors (ALDs)

Because Physical Science was administered for the first time in Fall 2014, Questar worked with DESE to create draft ALDs for Physical Science prior to the standard setting. During the workshop, the draft ALDs were used as guidelines for evaluating student performance and were beneficial to the panelists as they defined the borderline students and established recommended cut scores. Panelists also discussed and fine-tuned the draft ALDs during the meeting. At the conclusion of the standard setting, DESE collected the panelist recommendations for ALD revisions for consideration in the final wording of the Physical Science ALDs.

### 3.2.4. Results

Table 3.1 presents the recommend raw cut scores based on item ratings.

**Table 3.1. 2015 Standard Setting Results**

Basic RS	Proficient RS	Advanced RS
12	24	33

## 3.3. 2015 Cutpoint Validation

A cutpoint validation workshop was conducted in February 2015 for English II, Algebra I, English I, Algebra II, and Geometry. Changes to the test forms were not enough to justify conducting a full standard setting process for these content areas, so cutpoint validation occurred instead to review the existing cut scores to determine if they were still appropriate. The main goal of the cutpoint validation was to validate the existing cut scores for the English II, Algebra I, English I, Algebra II, and Geometry Assessments following changes to the assessments. Refer to Chapter 2, Section 2.1 for a description of the changes that took place beginning for the Fall 2014 administration. The final cutpoint validation report is provided in the *2014–2015 MO EOC Technical Report*.

Because the modified Angoff method was used for the initial 2008 and 2009 standard settings, the panelists received an overview of this method prior to reviewing the cutpoints in order to understand how the cutpoints were originally set. The focus of cutpoint validation was to revisit

cutpoints that have been previously established. The steps involved were reviewing the Fall 2014 operational form, discussing and fine-tuning the ALDs, reviewing the impact data, reviewing the ordered item booklet with the existing cutpoints indicated, and adjusting the cutpoints as needed. Therefore, cutpoint validation was not a simple replication of the standard setting process.

### 3.3.1. Panelists

Nineteen panelists participated in the 2015 cutpoint validation workshop. Panelists included classroom teachers who taught English Language Arts and Mathematics in Missouri schools, had administered the MO EOC Assessments in their respective content area, and were familiar with the standards.

### 3.3.2. Staffing

Questar provided staff members experienced in conducting cutpoint validation to facilitate the panelist groups. Most facilitators held doctorates in educational measurement, and all panelists were trained on the method prior to implementation with ample time for any questions to be addressed. Psychometricians and statistical analysts also attended the workshop to oversee quality control, observe the activities, and provide statistical and technical support when needed. A Questar program manager was also present, as well as DESE staff members.

### 3.3.3. Development of ALDs

ALDs for English I, English II, Algebra I, Algebra II, and Geometry were revised prior to the 2015 cutpoint validation workshop to align to the Missouri Learning Standards. Questar team created draft ALDs for DESE to review. Questar then reviewed the ALDs with DESE and updated them based on DESE’s feedback. During cutpoint validation, the draft ALDs were used as guidelines for evaluating student performance and were beneficial to the panelists as they evaluated impact data and reviewed the cut scores. Panelists also discussed and fine-tuned the draft ALDs during the meeting. At the conclusion of the cutpoint validation, DESE collected the panelist recommendations for ALD revisions for consideration in the final wording of the ALDs

### 3.3.4. Results

Table 3.2 presents the recommended cut scores from the cutpoint validation workshop. These new cuts will be used for future assessments.

**Table 3.2. 2015 Cutpoint Validation Results**

Content Area	Basic			Proficient			Advanced		
	Theta	RS	SS	Theta	RS	SS	Theta	RS	SS
English I	-0.55	18	175	0.58	27	199	2.01	37	232
English II	-0.69	17	180	0.45	27	198	2.06	38	225
Algebra I	-0.14	13	190	0.46	19	203	1.63	32	226
Algebra II	0.26	16	197	0.85	21	208	1.92	29	228
Geometry	-0.23	16	185	0.38	21	199	1.64	30	225

## Chapter 4: Item Analysis

### 4.1. Introduction

This chapter presents the item analysis summary information, which includes mean item scores and discrimination indices, at the item level for each content area. These item summary statistics (i.e.,  $p$ -values, point-biserial correlations, and omit rates) are based on the operational administrations that included responses from 2,335 students for Summer 2016, 26,730 students for Fall 2016, and 278,453 students for Spring 2017 across all content areas, as shown in Table 4.1. Differential item functioning (DIF) analyses were also conducted for each content area and administration.

**Table 4.1. Number of Students Included in the Analyses**

Test Period	Content Area	N-Count
Summer 2016	Algebra I	828
	Algebra II	19
	Am. History	69
	Biology	245
	English I	23
	English II	321
	Geometry	59
	Government	760
	Physical Science	11
	<b>Total</b>	<b>2,335</b>
Fall 2016	Algebra I	4,428
	Algebra II	836
	Am. History	580
	Biology	3,118
	English I	266
	English II	3,191
	Geometry	1,007
	Government	13,304
	<b>Total</b>	<b>26,730</b>
Spring 2017	Algebra I	60,582
	Algebra II	18,348
	Am. History	6,498
	Biology	61,957
	English I	12,870
	English II	61,594
	Geometry	7,003
	Government	46,661
	Physical Science	2,940
	<b>Total</b>	<b>278,453</b>

## 4.2. Item-Level Statistics

Appendix C presents the item difficulty, discrimination, and omit rates for all items on each assessment for the Summer 2016, Fall 2016, and Spring 2017 operational administrations. Field test items are not included in the tables. The results indicate that the items measure achievement across a range of difficulty and that most items are correlated with the total test score, thereby discriminating between low- and high-performing students.

For SR items, item difficulty is the proportion of students who gave correct responses to the item (also referred to as  $p$ -value). For PE/WP items, the mean score is the average of the scores for students who responded to these items. The discrimination index is the point-biserial correlation between the item score and the total score based on the remaining items (also referred to as corrected point-biserial correlation). Both item difficulty and item discrimination are expressed in the raw score metric.

When building a test form for the MO EOC Assessment, care is taken to refrain from choosing items with  $p$ -values less than 0.30 or greater than 0.95, or with negative point biserials. When  $p$ -values and point biserials are out of range, the answer keys are checked to verify that they are correct.

## 4.3. Speededness

The consequence of time limits on students' scores is called *speededness*. A test is speeded if examinees do not have time to respond to all items on the test. Examinees may receive a lower score than they would have had the test not been timed. Most *speededness* statistics are based on the number of items that were not attempted by students. The MO EOC Assessments were not designed to be speeded tests. Rather, they were intended to be *power tests*; that is, students are expected to have ample time to finish all items and prompts. For the purpose of this analysis, if a student did not attempt the last item on any of the separately timed subsections of the test, it was assumed that the student might not have reached the item because he or she ran out of time.

Item omit rates, especially for items appearing later in a test, are a gauge of potential test speededness. The "Omit Rate" column in Appendix C shows the percentage of students who omitted each SR item for each MO EOC Assessment. As shown in the tables, the omit rates are negligible or zero for most items, thereby supporting the interpretation that the MO EOC Assessments are power tests.

## 4.4. Differential Item Functioning (DIF)

Differential item functioning (DIF) occurs when an item has difficulty measures that vary substantially across subgroups of examinees with comparable ability. DIF was examined using the Mantel-Haenszel (MH) (1959) procedure for SR items and WINSTEPS software (Linacre, 2006a) for the PE/WPs. DIF analyses for the MO EOC Assessments presented in this technical report are meant for reporting the results for the purposes of this report only. Items flagged for DIF were still used to score students.

The Mantel-Haenszel method is a nonparametric approach to DIF. In the MH procedure, total raw scores are held constant while an odds ratio is estimated. In practice, the odds ratio is

generally converted to the delta metric, and the Educational Testing Service (ETS) categorization is applied to flag the significance of DIF effects (Dorans & Holland, 1992).

With the groups matched on raw score, comparable examinees can be placed in  $j \times 2$  tables of group by item response, where  $j$  equals the number of levels of the matching variable. For these analyses, if  $j$  equals each observed score category of the  $k$ -item tests, with  $j = 0, 1, 2, \dots, k$ , then one  $2 \times 2$  table for a given item with score category  $j$  can be represented as the following:

**Table 4.2. General Notation for the 2 x 2 Data Matrix**

	Correct	Incorrect	Total
Reference	$y_j$	$x_j$	$m_j$
Focal	$y'_j$	$x'_j$	$m'_j$
Total	$n_j$	$n'_j$	$N_j$

The Delta MH test statistic and variance have the following form:

$$DeltaMH = 2.35 \ln \left[ \frac{\sum_{j=0}^K \frac{(y_j x'_j - y'_j x_j)}{N_j}}{\sum_{j=0}^K \frac{y'_j x_j}{N_j}} \right]$$

where  $y_j, x_j, y'_j,$  and  $x'_j$  are the frequency counts of cells of the  $2 \times 2$  tables, and  $N_j$  is the total  $n$  for the cells.

The critical values of the ETS categorizations are 1.00 and 1.50 on the delta scale for categories A (negligible DIF), B (slight to moderate DIF), and C (moderate to severe DIF). Specifically, if the absolute value of delta is smaller than 1.00, the item is categorized as A. If the absolute value of delta is larger than or equal to 1.50, the item is classified as C. Otherwise items are categorized as B. In both the A and C categories, statistical significance is set at the 5% level for a single item.

The critical values for the PEs and WPs were determined by the DIF contrast, calculated by the DIF measure of reference group minus the DIF measure of focal group. Absolute logit values less than 0.43 were classified as A, greater than or equal to 0.64 were classified as C, and between 0.43 and 0.63, inclusively, were classified as B (Linacre, 2006b). Negative DIF contrast values favor the reference group whereas positive DIF contrast values favor the focal group.

Tables 4.3, 4.4, and 4.5 present the results of the DIF analyses for the items included on the Summer 2016, Fall 2016, and Spring 2017 operational forms, respectively. In these analyses, male and white students were considered the reference group, and female, black, and Hispanic students were considered the focal group. DIF analyses were performed when there was a minimum of 200 students in the focal group. As shown in the tables, very few of the SR and CR items showed C-level DIF.

**Table 4.3. DIF Results—Summer 2016**

#### **4.5. Summary**

The item analyses provided in this chapter show that the MO EOC Assessments have sound psychometric properties. For example,  $p$ -values show that MO EOC Assessment items measure achievement across a broad range of difficulty. In addition, item discrimination values show that most items are appropriately correlated with the total test score and thus contribute to distinguishing between lower-performing and higher-performing students. In addition, very few students omitted items during testing. The low percentage of students omitting SR items provides evidence that the test is a power test of the students' skills and not a speeded test. Finally, DIF statistics based on data from the 2016–2017 operational administrations show that item difficulty does not depend on group membership after conditioning on student ability.

## Chapter 5: Test Administration

### 5.1. Introduction

This chapter contains information about DESE and Questar’s processes that ensure the standardized administration of the MO EOC Assessments. The *Standards for Educational and Psychological Testing* (AERA, APA, & NCME, 2014) state, “For tests designed to assess the test taker’s knowledge, skills, abilities, or other personal characteristics, standardization helps to ensure that all test takers have the same opportunity to demonstrate their competencies” (p. 111). In other words, attention to the details of information dissemination, Test Examiner training, accommodations and modifications, and test security help ensure that students taking the MO EOC Assessments in different locations and under different circumstances have comparable opportunities for success.

The EOC Test Administration Manual contains detailed information about the testing guidelines, materials handling, and standardized administration instructions for the MO EOC Assessments. While this manual is not included here, much of the information contained in this chapter can be found in it.

Questar uses its online assessment platform to manage and deliver the MO EOC Online Assessments. This platform has two components:

- Student Test Delivery – The online testing student client is a small-footprint, secure browser application that is downloaded to the students’ workstations to allow uninterrupted testing and failsafe protection of student responses in the event of a connection loss.
- Administration and Reporting System – The online testing system administration system is a web application that allows districts, schools, and teachers/proctors to manage their students and assessments.

For the MO EOC Assessments, 2011–2012 was the first year in which districts were required to use an online delivery format unless a Paper/Pencil, Braille, or Large Print edition was required for a student as indicated in the student’s Individualized Education Program (IEP) and marked as an accommodation on the online test administration site. The Test Administration Manual contains information specific to the registration for and administration of the MO EOC Assessments. This process was continued for 2016–2017.

### 5.2. Students for Whom the MO EOC Assessments are Appropriate

The responsibility and authority for testing students in the MO EOC Assessments at the appropriate time in the course of instruction belongs to the local district. The MO EOC Assessments are based on Missouri Learning Standards rather than on GLEs. Therefore, when the content of the Missouri Learning Standards is covered in the local school district’s curriculum, the test may be administered regardless of student grade level or course name.

#### 5.2.1. Students with Individualized Education Programs (IEPs)

A student with disabilities, as classified under the Individuals with Disabilities Education Act (IDEA), has an IEP that, in part, governs whether a particular assessment is appropriate for the

student. In the case of the MO EOC Assessments, decisions about whether a student with a disability will participate in the assessments are made by the student's IEP team and are documented in the IEP. All students must take required EOC Assessments. If, however, a student's disability qualifies him or her to take the MAP-Alternate Assessment (MAP-A) for students with severe cognitive disabilities, that student will not participate in the MO EOC Assessments.

#### *5.2.2. Students with Individual Accommodation Programs*

Students with Individual Accommodation Programs (IAPs) are considered disabled under Section 504 of the 1973 Rehabilitation Act. These students are not served under IDEA and are not documented with a particular designation for the MO EOC Assessment. However, professionals who are knowledgeable about a student's disability and educational needs should make accommodation decisions for the student as they would for a student with an IEP.

#### *5.2.3. English Language Learner (ELL) Students*

Students who have been in the United States for 12 cumulative months or less since school age at the time of test administration may be exempted by the local school district from taking the English I and English II Assessments. The students must, however, participate in other required MO EOC Assessments, although their scores do not count for school accountability purposes. The other MO EOC Assessments that all students, including ELL students, are required to take are Algebra I, Biology, and Government.

### **5.3. Students for Whom a School or District is Accountable**

For accountability purposes, Missouri must include the results for any student who is eligible to take the MO EOC Assessments and has been enrolled at least one full academic year in a school (for school accountability) or district (for district accountability) without transferring out of the building or district for a significant period of time and re-enrolling. A full academic year is defined as the last Wednesday in September through the MO EOC Assessment administration. A significant period of time is considered "one more than half of the eligible days between the last Wednesday in September and the test administration." DESE obtains enrollment information from the Missouri Student Information System (MOSIS) data that are reported by school districts. This rule applies to the building and district summary levels independently. For example, a student who is coded as "In building less than a year," but was in the district a full academic year is excluded from the building totals but is included in the district totals.

### **5.4. Dissemination of Testing Materials and Information**

All test administration information, including the Test Administration Manual and training webinars, were posted to the online test administration site for District Test Coordinators, School Test Coordinators, Examiners, and Information Technology Coordinators. One week prior to the start of the testing window, Questar distributed all password information for the online system by e-mail to district and school level users participating in the current EOC administration. Districts had the opportunity to order the Braille and Large Print editions of the assessment from Questar. The District Test Coordinator downloaded and printed the accommodated Paper/Pencil test edition through the online administration site, as needed for students in the district. The District Test Coordinator was responsible for inventorying all Paper/Pencil materials, as well as disseminating the online test information to the test administrators. The District Test Coordinator

was also responsible for answering all district questions about test procedures and the online assessment platform. If the District Test Coordinator needed assistance with a question, he/she could contact Questar’s Missouri Customer Service through the designated phone number and/or e-mail address.

### **5.5. District and Test Examiner Training**

Both Questar and DESE were responsible for training the district staff on EOC test administration. DESE provided training webinars, scripts, and PowerPoint presentations on the Test Administration Manual, state procedures, and general testing issues. These training resources were available both on the DESE website and on the online test administration site. Appendix G contains the 2016–2017 training PowerPoint presentations for the MO EOC assessments.

Questar provided training on the online assessment platform. Questar training contained proprietary information and was only available on the test administration site. All Test Coordinators and Test Examiners were to view these standardized trainings prior to test administration. The District Test Coordinator was allowed to provide supplemental training on local issues (e.g., schedules). Both DESE and Questar were available to answer any questions the districts may have had about the MO EOC Assessment administration.

### **5.6. Test Security**

#### *5.6.1. Summary*

The MO EOC Assessment test books (Paper/Pencil, Large Print, and Braille) and online assessments were secure. Test Coordinators were instructed to keep the materials in a locked room or cabinet at all times when not in use. No testing materials may be photocopied, duplicated, scanned, or made accessible to personnel who were not responsible for testing. Additionally, written or oral discussion of specific MO EOC Assessment items breaches the security and integrity of the test. In accordance with the Standards, the Test Administration Manual contained explicit instructions about test security for Test Coordinators and Test Examiners.<sup>6</sup>

Standardized training was required for all District and School Test Coordinators, Examiners, translators, proctors, and any district staff who had responsibilities in testing. Each test book shipped to the district or downloaded and printed by the district contained secure barcode information for tracking purposes. Questar used this information to ensure that districts used the materials assigned to them for testing and returned all of their secure materials after the completion of testing. The Paper/Pencil forms included a barcode on each page of the document. Upon return to Questar, the barcode information on each test was verified. Questar then followed up with the appropriate district(s) regarding any missing materials to ensure return or destruction (if materials were contaminated).

When the tests were delivered online, Test Examiners did not have access to the student screens for the online assessment, only to the test administrator features. Students had unique, secure logins to access the MO EOC Assessments they were registered for, and these logins were disabled after the student had tested. For tests with multiple sessions (those including a PE/WP), the students also had a Session Access code given to them by the teacher at the start of the

---

<sup>6</sup> **Standard 6.7:** Test users have the responsibility of protecting the security of test materials at all times (p. 117).

session to ensure that students accessed the correct session of the test. Test items, as well as student responses, were encrypted during transmission to and from student computers.

### *5.6.2. Detection and Prevention of Testing Irregularities*

To protect the validity and fairness of scores on the MO EOC assessments, DESE has implemented measures to prevent and detect cheating. Possible cheating violations on the MO EOC Assessments include the following:

- Copying and reviewing MO EOC Assessment items with students
- Cueing students during testing either verbally or with written materials on the classroom walls
- Cueing students nonverbally, such as tapping or nodding the head
- Using a calculator on an EOC Assessment that does not allow calculator use, unless specified by the student's IEP
- Using a calculator that contains stored equations or connects to the Internet
- Splitting sessions into two parts
- Ignoring the standardized directions in the test books
- Paraphrasing parts of the assessment to students
- Changing or completing (or allowing other school personnel to change or complete) student answers
- Allowing accommodations that are not written in the IEP
- Allowing accommodations for students who do not have an IEP
- Allowing students to use dictionaries on parts of the MO EOC Assessment other than the WP
- Defining terms on the test
- Allowing students to access cell phones or other electronic devices during testing

To detect cheating, DESE has implemented the following steps for the MO EOC Assessments:

1. School officials, parents, and other interested parties call or email DESE to report a testing concern or allegation.
2. A narrative of the conversation, if reported orally, is written and read back to the individual reporting the concern.
3. The superintendent of the district in which the allegation is made is then contacted and read the narrative or email.
4. A letter is sent to confirm the conversation and to ask the superintendent to investigate the claim.
5. An MO EOC Assessment Quality Assurance Concern District Response Report is sent for the superintendent to use for replying to the allegation.

DESE also implemented a self-monitoring process whereby District Test Coordinators completed a Quality Assurance (QA) self-monitoring form.<sup>7</sup> This QA process was issued to District Test Coordinators in an administrative memo.<sup>8</sup> The form was designed to be used by District Test Coordinators as part of their regular supervision process throughout the assessment window, and it allowed districts to monitor and strengthen their administration of the MO EOC

---

<sup>7</sup> View the QA form online at <http://tiny.cc/deseqaself2017>.

<sup>8</sup> View the memo online at <https://dese.mo.gov/sites/default/files/am/documents/CCR-17-001.pdf>.

Assessments. The questions on the form were designed to focus attention and help districts examine important areas of assessment training, administration, and test security.

District Test Coordinators were asked to complete one MO EOC quality assurance form for one EOC classroom. Regarding cheating prevention, the form asked District Test Coordinators to “Explain the district’s test security plan” and answer the question, “What preventative measures are taken to curb cheating within the computer lab?” District Test Coordinators were urged to report testing irregularities or concerns immediately to the Assessment Section at [assessment@dese.mo.gov](mailto:assessment@dese.mo.gov) or (573) 751-3545. DESE also performed onsite spot checks of quality assurance procedures during the Spring testing window.

When testing irregularities were reported, DESE was able to request that Questar perform statistical analyses to detect and flag unusual response patterns. DESE then worked with districts to establish procedures for follow-up decisions appropriate to the situation.

## **5.7. Test Administration**

### *5.7.1. Test Organization*

Students took the MO EOC Assessments in one or two sessions depending on the content area. All assessments were administered online unless the student’s IEP specified a Braille/Large Print or Paper/Pencil administration. Each SR item consisted of a stem followed by four response options, and the student clicked an answer choice. The tests were not timed. Students were encouraged to complete an online tutorial of the online assessment platform prior to testing. This tutorial included instructions on how to use the tools in the system and practice questions for the students.

### *5.7.2. Test and Ancillary Materials*

District Test Coordinators or School Test Coordinators were responsible for providing all MO EOC Assessment materials to Test Examiners. The materials provided by Questar and/or DESE included the following:

- Test Administration Manual (electronic copy)
- Large Print and/or Braille test materials
- Return kit materials for accommodated test materials
- Accommodated Paper/Pencil test booklet (printed from the online assessment platform by the school district)

Students taking an accommodated version of the MO EOC Assessments needed the following additional materials, which were not provided by Questar or DESE:

- No. 2 pencils
- Scratch paper

For the online assessment, each student needed a computer with a monitor, mouse, and keyboard, or a tablet device. Adequate space should have been left between workstations. Students could use scratch, grid, or draft paper and a writing utensil while taking the online assessment. The Test Examiner needed the following:

- A computer for logging on to the test administrator interface
- A writing board and utensil

Additionally, students taking either the Paper/Pencil or online version were allowed to use a calculator for the Algebra I, Algebra II, and Geometry Assessments. Students taking the English I and English II writing prompts had access to a dictionary, thesaurus, and grammar handbook. Students taking any of the mathematics assessments had access to the Mathematics Reference Sheet and students taking the Physical Science assessment had access to the Periodic Table of Elements.

Calculators could not contain stored equations or functions at the time of the EOC Mathematics Assessments. Test Examiners were responsible for ensuring and verifying that calculators with the ability to store functions and equations (e.g., a graphing or a scientific calculator) had the memory cleared before and after each mathematics assessment.

Calculators could not have internet connectivity or be able to connect to anyone inside or outside the classroom during testing. Students could not use a calculator on a laptop or other portable computer, pocket organizer, cell phone, device with a typewriter-style keyboard, electronic writing pad, or pen-input device unless a particular assistive device was required for a student and was specified on his or her IEP.

### *5.7.3. Preparing the Test Administration Site and the Students*

Before students began the assessment using the online system, a representative of the district or school was responsible for the following tasks:

- Read the entire Test Administration Manual
- Review the DESE and Questar trainings regarding the EOCs
- Run a workstation readiness test on each workstation used for testing
- Ensure that the online test delivery system is downloaded to each workstation for test delivery
- Provide an upload to DESE (precode file) of all students that will be testing for the current administration of the EOCs (the precode file is a data file containing one record per student and each student is assigned a unique MOSIS ID. The purpose of the data file is to identify students, Examiners, and content areas for testing.)
- Input identification information for students who were not included in the precode file
- Specify district testing windows within the Missouri statewide test administration window

Additionally, the Test Examiner was responsible for setting and verifying class information and setting students' testing status codes and/or accommodations information in the online system.

Students were NOT allowed to use electronic devices such as cellular phones, digital cameras, gaming devices, or scanners during the testing session. However, students could use calculators during the Algebra I, Algebra II, and Geometry test sessions. (See Section 5.7.2 for more information regarding calculator usage and restrictions.)

#### 5.7.4. Directions for Administration

In accordance with Standard 6.1,<sup>9</sup> specific standardized directions for administration were printed in the Test Administration Manual. Directions to be read aloud to the students were printed in bold type and had a callout arrow in the margin for clarity. Information for the teacher that should not be read aloud was in italic type. Figure 5.1 provides an example of a script from the 2016–2017 Test Administration Manual (TAM) for the Geometry EOC Assessment.

**Figure 5.1. Directions for Administering from the TAM—Geometry**

### Geometry Assessment Online

#### Directions for Administering

*Distribute scratch, unlabeled grid or graph paper. If you have decided the students should use calculators for this assessment, make sure all students have a working calculator. Hard copies of the Mathematics Reference Sheet may also be distributed.*

**SAY** For the questions in this test, you will select an answer from a list of given choices. Remember to check that the circle that goes with the answer you chose is filled in after you click it. Your score on these questions will depend on how well you follow directions and show your understanding of Geometry. You may use a calculator and scratch paper to work through the questions. The Mathematics Reference Sheet is available during testing by clicking the reference sheet icon. Click the Help button for instructions on how to use the system tools.

There are several important things to remember:

1. Read each question carefully and think about the answer. Then choose the one answer that you think is best.
2. If you do not know the answer to a question, mark it for review, skip it, and go on. You may return to it later.
3. When you finish the test, you may check your work.

On your desktop, locate the icon titled “Questar Secure Browser MOEOC.”

Double-click this icon and the program will launch. Once the program has opened, you will see the login page for the secure browser.

Do not enter anything until you have been instructed to do so.

Can everyone see the login page?

*An example of the login page is below. Please be sure all students are on this page before proceeding with instructions.*

93

<sup>9</sup> **Standard 6.1:** Test administrators should follow carefully the standardized procedures for administration and scoring specified by the test developer and any instructions from the test user (p. 114).

## 5.8. Accommodations and Modifications

A student's IEP team had the responsibility and authority to determine individual accommodations to support and ensure his or her participation in the MO EOC Assessments. Students who were English language learners (ELLs) were also able to receive allowable accommodations to support and ensure participation in the MO EOC Assessments. Allowable accommodations were intended to assist the student by reducing the effects of his or her disability without reducing performance expectations. Allowable accommodations for the MO EOC Assessments included, but were not limited to, the following:

- A student may receive a modified version of the testing materials, such as the Braille, Large Print, or Paper/Pencil edition.
- A teacher may present the test content to a student in a nonstandard way, such as by reading it aloud in English or in the student's native language, paraphrasing it, or using sign language. For the English I and English II Assessments, this will result in the lowest obtainable scale score (LOSS).
- A student may be allowed additional time to complete one or more sessions of the assessment.
- A student may use an assistive communicative device.
- A student may be tested individually or in a small group.
- A student may be allowed to use a computer, another word-processing device, or a teacher scribe to record his or her responses.
- A student may use other assistive materials such as a bilingual dictionary.

Modifications are alterations in the test that change construct-related requirements. The resulting information may not be equal to the information that might be obtained without modifications. The following modifications for the MO EOC Assessments were able to be provided:

- Oral reading of the assessment, including paraphrasing questions
- Oral reading in native language
- Use of a bilingual dictionary for the English I or English II Assessment

In accordance with Standard 6.3,<sup>10</sup> Test Examiners indicated an accommodation, when allowed by a student's IEP and used for the MO EOC Assessment, by checking the appropriate box(es) for the student in the online test administration site.

Tables 5.1, 5.2, and 5.3 contain information about the percentage of students who received each type of allowable accommodation for each MO EOC Assessment for Summer 2016, Fall 2016, and Spring 2017, respectively. The most prevalent type of accommodation for the Summer 2016, Fall 2016 and Spring 2017 administrations across all MO EOC Assessments was testing in "Other Setting." See Appendix H for a list of accommodation codes from the 2016–2017 Test Administration Manual.

---

<sup>10</sup> **Standard 6.3:** Changes or disruptions to standardized test administration procedures or scoring should be documented and reported to the test user (p. 115).

**Table 5.1. Accommodation Distributions—Summer 2016**

## **5.9. Materials Handling and Return**

### *5.9.1. Materials Handling during Administration*

The Test Administration Manual contained detailed instructions for how schools and districts should collect and package the Paper/Pencil, Braille, and/or Large Print testing materials at the end of the test administration. For Test Examiners, these activities included, but were not limited to, the following:

- Collecting test books from the students using the accommodated editions
- Returning all used and unused test books to the School Test Coordinator
- Collecting all scratch paper used during testing
- Properly handling all contaminated test books (i.e., books having contact with bodily fluids such as blood or with any potentially hazardous material)

For School Test Coordinators, these activities included, but were not limited to, the following:

- Collecting testing materials from the Test Examiners
- Returning all test books (used and unused) to the District Test Coordinator
- Destroying all nonsecure testing materials

After receiving the used and unused test books from the School Test Coordinators, District Test Coordinators completed the following steps:

- Verify 100% return of test books
- Complete the Test Book Accountability Form and fax it to Questar

For the online system, the student needed to click the submit button once he or she had finished testing to submit the test for scoring. No additional information was needed from the Test Examiner after the student had completed the test. All demographic information was edited or added by the test administrator before the student started the assessment.

### *5.9.2. Questar's Secure Material Check-In Procedures*

Questar adhered to strict quality assurance procedures in order to ensure that all accommodated version test booklets were returned and accounted for. The check-in procedures included multiple steps to ensure that no test booklets were overlooked. All staff members received thorough and specific training before they participated in the check-in of test booklets.

Upon receipt of accommodated test booklets from the school districts, boxes were kept in a secure location and remained sealed until check-in. If a box had to be opened for any reason, it was immediately resealed.

Two teams checked in the secure materials. The first team prepared the test booklets for scanning. One district box was opened at a time, and secure test booklets were separated from ancillary materials and stacked on carts to be checked in. This process was repeated for all boxes for a district to ensure that all materials returned to Questar at the same time were checked in at

the same time. Once the first team filled the cart(s) with all the secure materials from a district, the cart(s) was passed to a second team.

The second team checked in each test booklet by scanning the secure barcode into Questar's database. Operators worked in teams of two at computers equipped with barcode scanners. Operator 1 counted and scanned enough secure documents to fill a storage box. The operator verified that the database collected the same number of barcodes. If there was a discrepancy, an immediate reconciliation took place. Each ID number (barcode number) had a check digit that ensured that all numbers were correctly read by the scanner and that no ID number was miskeyed when manually entered. If a barcode was damaged or not readable, the operator manually entered the barcode number into the system. After this process was complete, the box of secure materials was handed to Operator 2 and scanned a second time. The database verified that the same barcode numbers were read during the scanning of the box or an immediate reconciliation took place. After verification, the secure materials were placed in a Questar box for storage. The scanning system provided audible and onscreen cues to alert operators of scanning discrepancies.

Further validity checks were done before each box was sealed to ensure that there were no ID barcode scanning discrepancies and that all ID numbers were correct. The validity checks also ensured that the ID numbers and the quantity in each box matched what was entered into the database. Finally, each box was placed on a pallet and stored.

Post check-in procedures were also performed prior to notifying the districts of missing secure materials. For any district that was missing a secure material, an individual box-by-box hand search was conducted in an attempt to locate the secure material(s). If an unaccounted secure material was found, the material was then coded into the database by a Questar supervisor and Questar's Program Management team was notified. If unaccounted-for material(s) were not found during the box-by-box hand search, the material(s) was considered missing and the district was notified via the Secure Missing Material Report process. This was also communicated to DESE, who would then follow up with discretion.

### **5.10. Summary**

The distribution, administration, and collection of the MO EOC Assessments was carefully communicated and executed in the detailed Test Administration Manual. All standards related to test security, administration, and accommodations were adhered to throughout the process. The most important steps and procedures have been covered in this chapter. Readers interested in further detail should consult the Test Administration Manual for the MO EOC Assessments.

## Chapter 6: Scoring

### 6.1. Introduction

The MO EOC Assessment forms were processed and scored by Questar. SR items were automatically scored against a fixed key immediately after a test is submitted by the student. Each test form is tested entering 100% correct responses and 100% incorrect responses through both desktop and tablet clients, and each test score is validated as part of a comprehensive end-to-end process culminating in final reports.

The PE/WPs were scored by Questar’s qualified scorers. This chapter outlines the processes used to implement scoring materials for the PE/WPs, receive and scan student responses, hire and train scorers, score the PE/WPs, and maintain control of the quality of the scoring processes.

### 6.2. Scoring of the PE/WPs

Questar handscored the English II and English I Assessments, which contained WPs, and the Algebra I and Biology Assessments, which contained PEs. The PE/WPs required students to respond with extended written answers to questions on given topics or to a series of questions regarding specific events.

The following sections outline Questar’s processes for scoring of the PE/WPs in the MO EOC Assessments for 2016–2017, which was consistent for all three administrations (Summer 2016, Fall 2016, and Spring 2017). The PE/WPs were scored by human raters.

#### 6.2.1. Scorer Recruitment and Selection

Scoring quality starts with the recruitment process and extends through screening and placement (assigning scorers to prompts based on their skills and experience), training, qualification, and scoring. Questar accessed a large pool of educated candidates to professionally evaluate assessment prompts.

Questar selected scorers according to their strengths and background. All scorers had, at a minimum, a four-year college degree. The following steps show an overview of key processes:

1. Process Timeline and Recruitment Tool: Questar used a web-based application to collect data on scorer education, prior scoring experience, and other key information to screen candidates currently in the database system.
2. Initial Screening: Candidate data was analyzed and prospective scorers prioritized.
3. Offer: Questar contacted prospective scorers detailing project requirements, timelines, and quality standards.
4. Final Documentation and Project Placement: Scorers signed confidentiality agreements agreeing to keep all information and student responses confidential. Only scorers who successfully completed training and qualifying were allowed to evaluate student responses.

### 6.2.2. Scorer Training and Qualification Procedures

Questar content specialists reviewed training materials provided by DESE. Questar scoring staff communicated with DESE during this process regarding item questions or clarifications.

Training materials included the following:

- Anchor Sets: The anchor set is the primary reference for scorers as they internalize the rubric during training. All scorers had access to the anchor set while scoring and were directed to refer to it regularly.
- Practice Sets: Practice sets were used to help trainees develop experience in independently applying the scoring guide or rubric to student responses. The practice sets provided guidance and practice for trainees in defining the line between score points, as well as applying the scoring criteria to a wider range of types of responses.
- Qualification Sets: All qualifying sets were used to confirm that scorer trainees had grasped the scoring criteria and were able to accurately assign the range of scores to student responses. Scorer trainees had to demonstrate acceptable performance on these sets by meeting a predetermined standard for accuracy to qualify to score MO EOC performance events and writing prompts. Questar's digital scoring system programmatically enforced qualification rules.

The training materials were inherited from the previous vendor. DESE provided any new training materials since the transition of the program to Questar. DESE provided the Algebra responses used for the training materials. The responses were pre-designated as either training or qualifying sets. Per DESE's request, the Biology Crickets training materials were updated from paper/pencil to online responses. The new online responses mirrored the paper/pencil responses in content and scores.

### 6.3. Scorer Training

Scorers went through online training and qualifying prior to scoring, including reviewing scoring guidelines and procedures. This training provided scorers with a clear understanding of the training materials and scoring protocols of the MO EOC Assessments. Scorers were expected to read and review annotations of the training materials with focused direction given by scoring directors or content specialists. The following are the steps used during the training of the items:

- Scoring for Questar: This gave a brief overview of what scoring is, the tools provided to help the scorers, and the individuals who would support the scorers during the project.
- Questar Scoring System: Scorers were trained on the internal scoring system.
- Scoring the Missouri Project: Specifics were provided regarding the Missouri Project. DESE and Questar worked collaboratively so the scorers understood the project.

- Scoring the Item: This training process walked the scorers through the anchor papers, practice and qualification papers. The scorers proceeded through the qualification process and, upon qualifying, they continued on to operational scoring.
- Additional Training: Before operational scoring could begin, information on how to handle unscorable student responses as well as alert responses was provided.

Scoring started for the scorer once all of the steps were successfully completed.

#### **6.4. Qualification**

If applicants did not successfully complete the training and qualifying requirements, they were not allowed to score any MO EOC student responses. Furthermore, qualified scorers were dismissed if their scoring performance did not meet defined standards. Below are the qualification standards that must have been met in order to score the Missouri Project. The range of possible scores is noted below. The 4-point items have possible score points of 0, 1, 2, 3 and 4 or 1, 2, 3, and 4 depending on the item. All other hand-scored items have 0 as the lowest score. Perfect agreement is based on agreement to the answer key.

- 4-point items
  - (0–4, 1–4)
  - 2 sets of 10 papers
  - 80% exact agreement on one of two sets
  - Scorers saw both sets. If they passed the first, the second was a review.
- 3-point items
  - (0–3)
  - 2 sets of 10 papers
  - 85% exact agreement on one of two sets
  - Scorers saw both sets. If they passed the first, the second was a review.
- 2-point items
  - (0–2)
  - 2 sets of 10 papers
  - 95% exact agreement on one of two sets
  - Scorers saw both sets. If they passed the first, the second was a review.
- 1-point items
  - (0–1)
  - 2 sets of 10 papers
  - 100% exact agreement on one of two sets
  - Scorers saw both sets. If they passed the first, the second was a review.

##### *6.4.1. Second Read Procedures*

Rater agreement is the agreement between the first and second scores assigned to student responses. Rater agreement indices include exact, adjacent, and nonadjacent agreement. Guidelines for rater agreement are determined in accordance with customer requirements and

Questar scoring standards for exact and adjacent agreement. Questar scoring staff used rater agreement results as one factor in determining the needs for continuing training and intervention on individual levels.

Questar's scoring system included comprehensive rater agreement reports that allowed scoring directors to monitor both individual and group performance. After the first score was applied, the system automatically sent the 10<sup>th</sup> document to a different scorer for a second read. Reader one provided the score of record, and the second read was for rater agreement purposes only.

#### *6.4.2. Scoring Monitoring and Recalibration Procedures*

##### *6.4.2.1. Read-Behinds*

The process of reading behind scorers (hereafter referred to as a read-behind) was a major responsibility of Questar's content staff and a primary tool for guarding against scorer drift. Questar's scoring system's integrated read-behind tool allowed Questar staff to review the scores assigned to individual student responses by any given scorer. The team leads used an internal report to monitor and ensure consistent scoring. If an incorrect score was identified during the read-behind, the correct score was assigned and that score became the score of record.

Questar's content staff could perform a search for the following:

- Responses scored by a particular scorer
- Responses receiving a particular score point
- Responses with scores that agree with, are adjacent to, or are non-adjacent to each other
- Combinations of these features

Content staff reviewed responses to confirm that the scores were correctly assigned and to give customized feedback and remediation to individual scorers.

##### *6.4.2.2. Calibration*

Content staff used calibration sets as needed to reinforce scoring standards, introduce scoring decisions, or correct scoring issues and trends. The primary goal of calibration was to continue training and to reinforce the scoring standards. Calibration sets may be "on the line" between score points or might contain unusual examples that are challenging to score and therefore useful for reinforcing the scoring rubric. Online calibration sets could be given to entire groups, a subset of scorers, or individual scorers, as needed, to score independently. These annotated sample responses promoted accuracy by exploring project-specific issues, score boundaries, or types of responses that were particularly challenging to score consistently. After scoring an online calibration set, scorers could ask questions and seek clarification of the score point or annotation.

Calibration sets are developed throughout the scoring window, using responses that serve as training examples, both in one-on-one and group situations. Calibration sets are also used after a weekend off, if needed. These papers are shredded after the project is complete.

##### *6.4.2.3. Managing Scoring Quality (Scorer Exception Processing)*

Content staff, often along with a project manager or human resource representative, intervened when scorer performance statistics did not meet quality standards or a scorer violated other

Questar policies. Intervention included calibration, retraining, direct counseling and review of papers, and requalification. Scorer exception processing allowed Questar's project managers to define intervals at which the scoring system would check scorer validity for exact and adjacent agreement. If scorers were below pre-set standards, staff monitoring this process would interrupt their scoring process to review anchor papers or take other steps to improve their scoring. Through this process, Questar's scoring system could provide an additional training/requalification set, and if performance was not improved, could lock scorers out of the scoring system. This process prevented scorers from continuing to score if standards were not maintained.

Because the system monitored scorers and provided the scorers' information quickly, Questar's content staff continually focused on quality control measures. These measures included read-behinds, calibration, and responding to questions in the review queue. Content staff was able to spend more time working directly with scorers who had questions.

### **6.5. Validity Responses**

Validity responses are pre-scored responses strategically interspersed in the pool of operational responses. These responses are not distinguishable from operational responses and scorers' scores are only accepted for monitoring purposes, not in replacement of the true score.

The use of validity responses provides an objective procedure that helps ensure that scorers are applying the same standards throughout the project. This procedure offers feedback on the accuracy and consistency of individual scorers and groups of scorers assigned to a given item. Questar's validity mechanism provides an objective and systematic check of accuracy. It verifies that scorers are applying the same standards throughout the project and, therefore, guards against scorer drift and ultimately group drift. This procedure provides immediate feedback on individual scorers and the group as a whole.

Validity papers are actual student responses chosen by the scoring director as examples that clearly earn certain scores. There is only one scoring director per content area. Following the standards established, scoring directors assigned "true scores" to validity responses to compare how often scorers match them throughout the scoring session. The validity pool included responses encompassing the entire score range for each item. Scorers scored them without being aware they were scoring validity papers rather than operational responses. Validity responses were sent to scorers throughout the project.

Each MO EOC content area was set to contain validity papers at a frequency rate determined by the range of scores and complexity of each item. This means that each scorer would see a validity paper at varying times throughout the project. The scorers could not distinguish a validity paper from an operational response because these papers are pulled from operational scoring. The process of selecting validity papers and keeping the pool fresh, was to select papers scored by expert readers. Questar's system allows a team leader, scoring director, or content specialist to score validity items using a hierarchical approval process to ensure the score has been adequately confirmed. For instance, if a score of 3 was given by a team leader, it could not be selected for a validity response unless confirmed and approved by the scoring director. If the validity response has been chosen by the scoring director, the response must be confirmed and approved by the content specialist.

Tables 6.1 and 6.2 show the summaries of the validity paper results at the end of the project for the Fall 2016 and Spring 2017 administrations, respectively. The “Rater Agreement Plan” column indicates the expected percent of agreement given the maximum points available for the item. A higher percent was expected for items with fewer points, and a lower percent was expected for items with more points. For example, the rater agreement plan was 100 percent for 1-point items and 80 percent for 4-point items. The “Rater Agreement Actual” column shows the observed rater agreement. The variance is the difference between the actual and planned rater agreement. Positive values indicate that the actual agreement was higher than the planned agreement, whereas negative values indicate that the actual agreement was lower than the planned agreement. Overall, items worth one point tended to have smaller variances than items worth two or more points. The item with the largest variance in the Fall administration was an item where rater agreement was lower than the planned rater agreement (79% versus 95% for a 2-point English item). The item with the largest variance in the Spring was an item where rater agreement exceeded the planned rater agreement (98% versus 80% for a 4-point Algebra I item). The results of the validity paper scoring indicate that for the majority of items, the variance was relatively small and within 10%.

Summer 2016 validity paper results are unavailable due to the low n-counts and small number of scorers. Because Summer 2016 had such low n-counts, responses were read by expert scorers such as the scoring director and team leaders.

**Table 6.1. Summary of Validity Paper Results—Fall 2016**

Item	N-Count	#Points	Rater Agreement Plan	Rater Agreement Actual	Variance
English I – 100085793-1	271	4	80%	82%	2%

### 6.5.1. Validity as Review

Selected validity responses were annotated by the content staff and flagged for review. If a scorer incorrectly scored one of these responses, content staff would address this with the scorer. This feedback helped in preventing scorer drift. Once a scorer received a validity response, it was not re-administered.

### 6.5.2. Frequency Distribution

Frequency distribution, or the number or percentage of scores assigned at each score point of a rubric, was another key metric tracked and managed during scoring. Questar evaluated any anomalous scoring trends at the item and scorer level and intervened with the individuals involved. Anomalous scoring trends were determined by comparing individual reader distribution of scores to the overall group distribution of scores. Frequency distribution reports showed a breakdown of score points assigned on a given item. Expressed in percentages, data in these reports showed how often scorers, individually and as a group, assigned each score point.

### *6.5.3. Retraining and Resetting Scores*

Questar’s electronic scoring system has the ability to purge the scores assigned by a scorer whose work was deemed substandard. In those cases, the scores assigned by that individual would be cleared from the database. The responses would then be rerouted to qualified scorers and rescored according to the original scoring design. The scoring system also allows scoring leadership to reset scores for a date range or an item. Questar has not had to use this process to-date during this project. If it had, that reader would have been removed from the project.

### *6.5.4. Reporting and Data Analysis*

Questar’s digital scoring system automatically captured and tracked all score data. By reviewing up-to-date scorer performance statistics, Questar could quickly identify particular scorers whose performance fell outside of group norms while also keeping close track of the group as a whole. Reports for use in quality monitoring and project completion status were generated and updated automatically and were available to Questar scoring leadership staff at any time via the digital scoring system. Questar’s reports gave daily and cumulative statistics and provided individual and group average agreement percentages.

### *6.5.5. Item Types and Score Points for each Content Area*

#### *6.5.5.1. Summer 2016*

English Writing Prompts:

- English I contained a narrative essay prompt, with score points 1–4, 1–4 and 0–2
- English II contained an explanatory essay prompt, with score points 1–4, 1–4 and 0–2

Algebra I Performance Event: Multi-part (four sections) with a graphing task.  
0–1, 0–2, 0–3, and 0–4 score points

Biology Performance Event:

- Item 1 – Constructed response. 0–1 score points
- Item 2 – Constructed response. 0–1 score points
- Item 3 – Constructed response. 0–1 score points
- Item 4 – Constructed response. 0–1 score points
- Item 5 – Constructed response, extended response. 0–3 score points
- Item 6 – Graphing task, extended response. 0–4 score points
- Item 7 – Constructed response. 0–1 score points
- Item 8 – Constructed response. 0–1 score points
- Item 9 – Constructed response. 0–1 score points
- Item 10 – Constructed response. 0–2 score points
- Item 11 – Constructed response. 0–1 score points
- Item 12 – Constructed response. 0–2 score points
- Item 13 – Constructed response. 0–1 score points

#### *6.5.5.2. Fall 2016*

English Writing Prompts:

- English I contained a narrative essay prompt, with score points 1–4, 1–4 and 0–2

- English II contained an explanatory essay prompt, with score points 1–4, 1–4 and 0–2

Algebra I Performance Event: Multi-part (four sections) with a graphing task.  
0–1, 0–2, 0–3, and 0–4 score points

Biology Performance Event:

- Item 1 – Constructed response. 0–1 score points
- Item 2 – Constructed response. 0–1 score points
- Item 3 – Constructed response. 0–1 score points
- Item 4 – Constructed response. 0–1 score points
- Item 5 – Constructed response, extended response 0–3 score points
- Item 6 – Graphing task, extended response. 0–4 score points
- Item 7 – Constructed response. 0–1 score points
- Item 8 – Constructed response. 0–1 score points
- Item 9 – Constructed response. 0–1 score points
- Item 10 – Constructed response. 0–2 score points
- Item 11 – Constructed response. 0–1 score points
- Item 12 – Constructed response. 0–2 score points
- Item 13 – Constructed response. 0–1 score points

#### 6.5.5.3. *Spring 2017*

English Writing Prompts:

- English I was a narrative essay prompt, with score points 1–4, 1–4 and 0–2
- English II was an explanatory essay prompt, with score points 1–4, 1–4 and 0–2

Algebra I Performance Event: Multi-part (four sections) with a graphing task.  
0–2, and 0–4 score points

Biology Performance Event:

- Item 1 – Constructed response. 0–1 score points
- Item 2 – Constructed response. 0–1 score points
- Item 3 – Constructed response. 0–1 score points
- Item 4 – Constructed response, extended response 0–3 score points
- Item 5 – Constructed response. 0–2 score points
- Item 6 – Constructed response, extended response 0–3 score points
- Item 7 – Graphing task, extended response. 0–4 score points
- Item 8 – Constructed response, extended response 0–3 score points
- Item 9 – Constructed response. 0–1 score points
- Item 10 – Constructed response. 0–1 score points

## 6.6. Rater Agreement

Rater agreement provides evidence supporting scorer consistency. Tables 6.3, 6.4, and 6.5 present the rater agreement for each item for Summer 2016, Fall 2016, and Spring 2017, respectively. The tables provide the total *n*-count for each item and the *n*-count of double reads

(i.e., the responses that received a second read). The agreement rates were calculated based on the double reads. Because Summer 2016 had low *n*-counts, responses were read by expert scorers such as the scoring director and team leaders. The percent of student responses of which two raters agreed exactly for a given item is presented (Exact Agreement Actual). Some degree of disagreement is to be expected with human judges, so the Exact + Adjacent Agreement is presented. For a few 1-point items, the Exact + Adjacent Agreement is less than 100% due to instances where the raters disagreed on whether the student response was scoreable. Across the three administrations, the Exact agreements were higher than 80% with a few exceptions and the Exact + Adjacent agreements were perfect (100%) for the majority of items and 95% or higher for the remaining items.

Another approach to rater agreement is weighted kappa, which corrects for chance agreement (i.e., the probability that two raters will agree simply by chance based on number of score points available). The Fleiss-Cohen weights were applied for the weighted kappa statistic (Fleiss & Cohen, 1973). Landis and Koch (1977) proposed the following interpretation guidelines for kappa values.

$\kappa$	Interpretation
<0	Poor agreement
0.01 to 0.20	Slight agreement
0.21 to 0.40	Fair agreement
0.41 to 0.60	Moderate agreement
0.61 to 0.80	Substantial agreement
0.81 to 1.00	Almost perfect agreement

Across the three administrations, most of the weighted kappa values fall within the category of Almost Perfect Agreement (49 of 59, 83%), although there are a few items in the Substantial (6 of 59, 10%) and Moderate (4 of 59, 7%) Agreement classifications. In summary, the rater agreement percentages (i.e., Exact, Exact + Adjacent) and the weighted kappa results indicate a high degree of consensus among raters for the hand-scored items.

**Table 6.3. Rater Agreement—Summer 2016**

## Chapter 7: Scaling and Equating

### 7.1. Introduction

This chapter details the scaling and equating procedures implemented for the MO EOC Assessments. The purposes of scaling and equating are to maintain the consistency of the MO EOC Assessments score scales over time and ensure that the achievement levels are applied consistently from year to year.

A pre-equating model (Kolen & Brennan, 2004) has been used to produce scoring conversions for each MO EOC Assessment since the establishment of the program. This chapter begins with a description of the IRT models used for equating, followed by an overview of the scaling and equating procedures.

The Summer 2016, Fall 2016, and Spring 2017 administrations used previously administered test forms for all content areas and the RSS conversions already in existence. However, a special recalibration study for Biology was undertaken to investigate item parameter shift. Students from the Spring 2017 administration were scored using the RSS conversion table based on the recalibration. Beginning in Fall 2014, five content areas (English I, English II, Algebra I, Algebra II, and Geometry) had updated test forms, so a post-equating was completed in 2014–2015 for those assessments.

Detailed procedures for scaling and equating for the 2014–2015 administration are provided in the *2014–2015 MO EOC Technical Report*. Scaling and equating procedures for the Summer 2014 and previous administrations—as well as for the Biology, Government, and American History, which used previously intact forms—are provided in the *2009–2010 MO EOC Phase I Technical Report* and the *2009–2010 MO EOC Phase II Technical Report* located on the DESE website at <http://dese.mo.gov/college-career-readiness/assessment/assessment-technical-support-materials>.

### 7.2. Item Response Theory (IRT)

Rasch scaling is “a method for obtaining objective, fundamental, linear measures from stochastic observations of ordered category responses” (Linacre, 2006a, p. 10). One feature of the Rasch model that distinguishes it from classical test theory is the placement of estimates of a person’s ability and item difficulty on the same scale. The Rasch model expresses the probability of a correct response to an item as a function of the ability of the person and the difficulty of the item. In the Rasch model, the probability of a correct response to item  $i$ , given  $\theta$ , is

$$P_i(\theta) = \frac{e^{(\theta - b_i)}}{1 + e^{(\theta - b_i)}}$$

where  $\theta$  = latent trait, or ability, level and  $b_i$  = the difficulty parameter for item  $i$ .

Masters (1982) developed the partial credit model as an extension of the Rasch model to handle polytomous items, or items that allow for partially correct responses (e.g., open-ended items).

For an item with possible scores ranging from zero to  $J$ , the probability of obtaining score  $j$  on item  $i$ , given  $\theta$ , is

$$P_{ij}(\theta) = \frac{e^{\sum_{k=0}^j(\theta-d_{ik})}}{\sum_{x=0}^J e^{\sum_{k=0}^x(\theta-d_{ik})}},$$

where  $d_{ij}$  is the difference between the overall item difficulty,  $b_i$ , and the step parameter  $\gamma_{ij}$  for level  $j$  of item  $i$ , and the sum of step parameters is zero across all levels of item  $i$ .

Winsteps software (Linacre, 2006b) was used to perform the scaling and equating for the MO EOC Assessments during the administrations with and without PEs. Winsteps is designed to produce a single scale by jointly analyzing data from students' responses to both SR items and PE/WPs. SR items were calibrated using the Rasch model (Rasch, 1960; Wright & Stone, 1979), while the partial credit model (Masters, 1982) was used to calibrate the PE/WPs.

### 7.3. Scaling and Equating

#### 7.3.1. Scale Score Ranges

Table 7.1 presents the scale score ranges for Summer 2016, Fall 2016 and Spring 2017.

**Table 7.1. Scale Score Ranges by Achievement Level**

Content Area	Achievement Level	Scale Score Range
English II	Below Basic	100–181
	Basic	182–199
	Proficient	200–224
	Advanced	225–250
Algebra I	Below Basic	100–186
	Basic	187–199
	Proficient	200–224
	Advanced	225–250
Biology	Below Basic	100–176
	Basic	177–199
	Proficient	200–224
	Advanced	225–250
English I	Below Basic	100–179
	Basic	180–199
	Proficient	200–224
	Advanced	225–250
Algebra II	Below Basic	100–185
	Basic	186–199
	Proficient	200–224
	Advanced	225–250
Geometry	Below Basic	100–188
	Basic	189–199

Content Area	Achievement Level	Scale Score Range
	Proficient	200–224
	Advanced	225–250
Government	Below Basic	100–178
	Basic	179–199
	Proficient	200–224
	Advanced	225–250
Am. History	Below Basic	100–181

Physical Science	Below Basic	100–167
	Basic	168–199
	Proficient	200–224
	Advanced	225–250

### 7.3.2. Recalibration for Biology

Due to the drop in student performance observed for the Spring 2016 Biology Assessment, the Missouri TAC and DESE requested that Questar recalibrate the Biology forms to minimize variations in test results statewide due to form differences. The result was a set of updated Biology RSS tables used for assigning student performance levels so that the tables are more equivalent across the test forms.

Because the Biology forms did not have common items or common students, the approach recommended by the TAC was to combine data from the most recent large Spring administrations. Specifically, the Spring 2014, 2015, and 2016 administrations were combined into one large free run calibration using Winsteps to place items from all three forms onto a common theta scale. The assumption was that the students testing each Spring were similar to each other.

The following steps describe the procedure:

1. Prepare the data so that the Spring 2014, 2015, and 2016 data are in the same file but occupy separate columns.
2. Run Winsteps to simultaneously calibrate the data from the three years together, centering on people.
3. Run Winsteps separately by year using an item anchor file to create a raw score to theta table for each test form.
4. Generate the RSS table and apply the appropriate scale score rounding rules.

The results indicated that performance rates regressed toward the mean of the different forms yielding less variation between forms. The Basic, Proficient, and Advanced cut scores for the Spring 2016 form changed from 19 to 17, 34 to 31, and 46 to 44, respectively. Students who took the Spring 2016 Biology Assessment were rescored with the recalibrated RSS conversion table.

The recalibrated RSS conversion tables were used for the Fall 2016 and Spring 2017 Biology Assessments.

### 7.3.3. Estimation of the Slope and Intercept

Table 7.2 presents the slopes and intercepts for the RSS linear transformation.

**Table 7.2. Theta to Scale Score Transformation with Slopes and Intercepts**

Content Area	Basic		Proficient		Advanced		Slope	Intercept
	Theta	SS	Theta	SS	Theta	SS		
English II	-0.69	182	0.45	200	2.06	225	15.54	192.98
Algebra I	-0.14	187	0.46	200	1.63	225	21.43	190.11
Biology	-0.69	177	0.51	200	1.79	225	19.53	189.99
English I	-0.55	180	0.58	200	2.01	225	17.55	189.76
Algebra II	0.26	186	0.85	200	1.92	225	23.25	180.34
Geometry	-0.23	189	0.38	200	1.64	225	19.76	192.51
Government	-0.56	179	0.56	200	1.86	225	19.11	189.37
American History	-0.11	182	0.56	200	1.49	225	26.64	185.19
Physical Science	-1.23	168	0.14	200	1.21	225	23.43	196.62

### 7.4. RSS Conversions

Appendix D provides the RSS conversions for Summer 2016, Fall 2016, and Spring 2017.

## Chapter 8: Reporting

### 8.1. Introduction

The purpose of reporting assessment data is to communicate test results to students, parents, teachers, administrators, and other stakeholders. The MO EOC Assessment reports provide useful information for determining the performance of students in a particular district, school, or classroom. These reports help describe students' knowledge and skills regarding a set of expectations, allowing educators to determine specific instructional needs, measure student mastery toward post-secondary readiness, provide evidence of accountability for Missouri and national programs, and evaluate educational programs. Districts may also use locally designed assessments aligned to the Missouri Learning Standards to provide more detailed information for each student in specific test areas.

Questar delivers a General Research File (GRF) to DESE at the end of each test administration that contains all of the raw data collected for each administration. Questar also provides a Guide to Interpreting Results for DESE to post on their website that provides explanations of the CLEs and ALDs for each content area, as well as samples of the Individual Student Report (ISR) and the Student Score Label with descriptions of the information they contain. ISRs are provided in the online assessment platform for all assessment windows. Student Score Labels are provided in hard copy to districts following each administration.

### 8.2. Test Scores

The MO EOC Assessment score indicates that an individual student performs at the Below Basic, Basic, Proficient, or Advanced level in a given content area. ALDs provide details about the content expectations that students at each level meet or exceed. The scores are scaled in several ways: raw scores, scale scores (derived from the Rasch model), and achievement level (based on scale score cuts) that describe what students can do in terms of the content and skills assessed. These scores provide a way to compare test results with standards of academic performance. Subscale scores are not reported for the MO EOC Assessments.

Missouri promotes the use of achievement level results, reporting them annually on each assessment at the student, school, district, and state levels. Individual student and average scale scores are also used, but they play a secondary role and are generally interpreted with reference to their distance from achievement level cut points.

To determine the achievement level scores, Questar converted each student's raw score points earned into a scale score that ranged from 100 to 250, as described in Chapter 7. The scale score determined the student's achievement level. For all content areas, a scale score of 200 to 224 was considered Proficient, and a scale score of 225 and above was considered Advanced. Each achievement level represented standards of performance for each assessed content area. Test results were reported for students as a whole, as well as by student group, including gender, ethnicity, migrant status, free and reduced lunch (FRL) status, English language proficiency, Title I, IEP status, and accommodations used during testing. Scores are reported to schools and districts in annually published reports (see Chapter 9 for more information).

No stakes for teachers are attached to student-level scores by the state. Teachers are encouraged to consider student performance on the MO EOC Assessments in determining course grades. DESE recommends that MO EOC scores account for at least 10 percent but not more than 25 percent of a student's grade in a course with a corresponding MO EOC Assessment. Districts receive students' scores on the MO EOC Assessments within five business days after test administration, and DESE provides districts with "curved percentages" to assist teachers in appropriately considering EOC scores in determining course grades (<http://dese.mo.gov/sites/default/files/asmt-eoc-curved-percentages.pdf>). Teachers are counseled to interpret individual student scores only in the context of other assessment results and their own experience.

### **8.3. Individual Student Report (ISR)**

The 2016–2017 Individual Student Report (ISR) provides information about performance on the MO EOC Assessment, describing the results in terms of four levels of achievement in a content area. It is used for measuring an individual student's mastery toward post-secondary readiness for the content area. It is also used in instructional planning as a point of reference during parent-teacher conferences and for permanent recordkeeping. Teachers are informed that other sources of information should be used along with this report when determining the student's areas of strength or need.

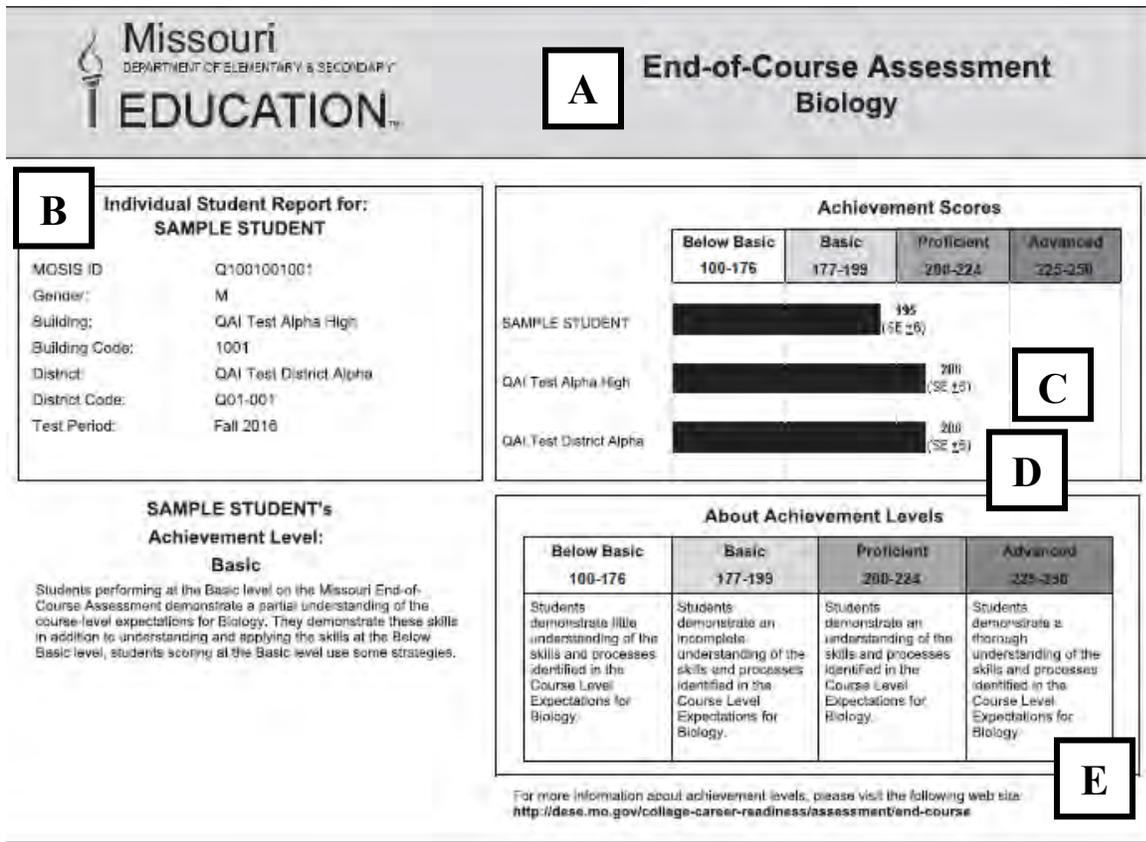

On the report, achievement-level scores describe what students can do in terms of the CLEs for the content and skills assessed by the MO EOC Assessment. A student at the Proficient or Advanced level has met the standard.

A sample of the ISR appears in Figure 8.1. A brief description of selected parts of the report is as follows:

- A. The heading of the ISR includes the content area for the results being presented. A separate report is produced for each content area tested.
- B. The student information section contains the biographic data for the individual student taking the assessment. Identifying information including the MOSIS ID, gender, building, and district is listed, followed by the test period.
- C. The individual student's results are presented numerically as a three-digit scale score with the SE. An accompanying bar graph to the right of the scale score illustrates the achievement level obtained by the student. Achievement levels (whether Below Basic, Basic, Proficient, or Advanced) are based on the scale score ranges listed beneath the Achievement Level heading in the table.
- D. The mean scale scores for the student's building and district are displayed in the two rows below the student's individual results. The mean scale score, with an associated SE, and the bar graph provide a way to view the individual's results in contrast to the group's results for the content area during the same test period.
- E. The narrative describes the student performance characteristics corresponding to the obtained achievement level. The text is specific to the content area tested. At the bottom

of the narrative is a URL for a website that provides additional information for all of the achievement levels for the content area.

**Figure 8.1. Individual Student Report (ISR)**

#### 8.4. Student Score Label

The 2016–2017 Student Score Label provides a summary of a student’s results on the MO EOC Assessment. A separate label is produced for each content area tested. The individual label provides the student’s biographic data, scale score, and achievement level. The labels have adhesive backing so they can be easily transferred onto the student record folders.

A sample label is shown in Figure 8.2. A brief description of selected parts of the label is as follows:

- The left side of the label shows the student’s name and identifying information.
- The upper right side shows the content area tested. If a student has results for more than one content area, the next label is printed below the first one.
- The lower right side shows the student’s scale score and achievement level.

**Figure 8.2. Student Score Label**

ARNETT, BELINDA	<b>A</b>	Missouri End-of-Course	<b>B</b>
MOSIS ID: 999999999		English II	
Building: Washington HS			
District: Jefferson	<b>C</b>	Scale Score: 213	
Test Period: Spring 2016		Achievement Level: Proficient	

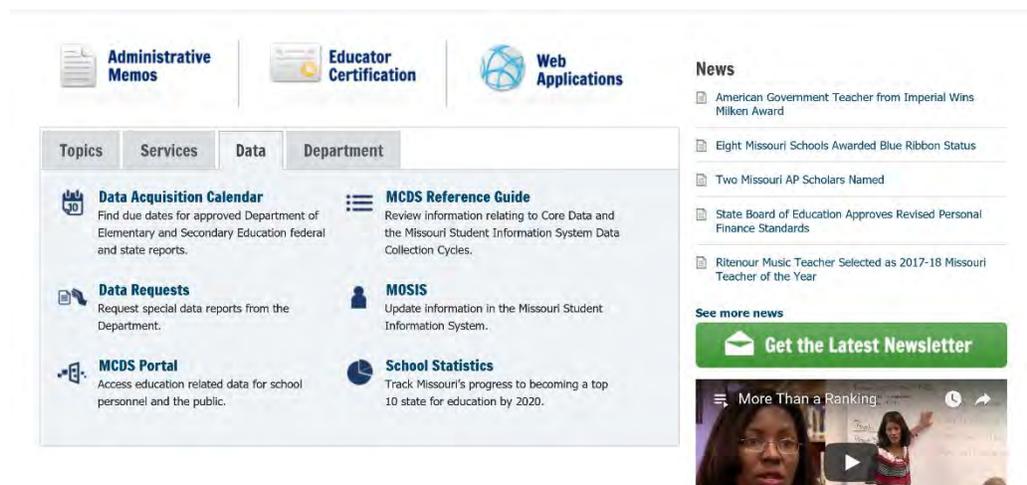

## 8.5. Missouri Comprehensive Data System (MCDS) Portal

### 8.5.1. Purpose and Use

For the first two years of MO EOC Assessment administration, summary-level EOC results were available to school district personnel in a set of standard reporting configurations through DESE’s Crystal Reporting system. Reporting options included administrative reports, adequate yearly progress (AYP) reports, achievement level reports, content standard reports, and item analysis reports.

Beginning with the 2011–2012 school year, DESE transitioned all assessment reporting to the state’s data portal, the Missouri Comprehensive Data System (MCDS). MCDS provides the general public with access to high-level EOC summary reports and allows school district personnel with appropriate permissions to access EOC data at a variety of levels. Through MCDS, designated district personnel are able to request on-demand, customized reports that are configured and disaggregated in ways that best meet their needs for such activities as evaluating programs, revising curriculum, and improving teaching and learning.

Users access MCDS from a link to the portal on the Department’s homepage (<http://dese.mo.gov/>). From there, they access the data portal directly through the MCDS link, as shown in the following image.

Secure content is available through a link at the top of the MCDS portal's homepage. District users with appropriate permissions can log in to access data. Once users have logged in, they are returned to the MCDS portal page where they can locate EOC data through the State Assessment link.

**Welcome to the new Missouri Comprehensive Data System**

The MCDS is a new resource provided by the Missouri Department of Elementary and Secondary Education that allows school personnel and the public to access education-related data.

The data made available to the public masks or hides data for groups with 10 or fewer students to protect confidential information about individual students, as required by federal law. The MCDS is still in development. In the coming months, a secured area of the website will become available to authorized school personnel to access unmasked school district and school building data.

Two tools are available to assist you:

On the State Assessment page, a Guided Inquiry link allows users to create summary administrative reports, achievement level reports, and historical AYP reports. Authenticated users can also download student-level data from the Guided Inquiry link.

An unlimited number and configuration of reports may be created through MCDS. In addition to Administrative Reports, the MCDS portal also provides an unlimited configuration of summary reports, as shown in Table 8.1, that are beyond the scope of this technical report. Additional information and training pertaining to MCDS capabilities are available on DESE’s website at <http://mcds.dese.mo.gov/trainingcenter/Pages/default.aspx>.

**Table 8.1. Reports Available on the MCDS Portal**

<b>Report Type</b>	<b>Report</b>
<b>Administrative Reports</b>	Guided Inquiry - State Assessment Administrative: MAP Scale Score Summary

	Guided Inquiry - State Assessment Content Standard - Item Analysis: Goal Process IBD

### 8.5.2. Administrative Reports

These reports provide student-level test data. Based on only the MO EOC Assessment results, four reports are generated: MO EOC Scale Score Summary, MO EOC Student Demographic, Student Achievement Level, and Student Report. Additionally, a historical report of the student's EOC participation is located within the Administrative Reports.

**MO EOC Scale Score Summary:** This report lists each student in the school or district along with his or her MOSIS ID, testing year, content area, grade level, MO EOC scale score, and achievement level.

**MO EOC Student Demographic:** This report lists all students in the school or district along with their date of birth (DOB), content area, MOSIS ID, district ID, and relevant demographic information, including if the student has been in the district for less than a year, if the student has been in the building for less than a year, if the student is limited English proficient (LEP), the student’s race, if the student qualifies for free and reduced lunch (FRL), if the student has an individualized education program (IEP), if the student is an English-language learner (ELL)/LEP

who has been in the school for less than one year and in the country for less than three years, if the student is an LEP/ELL Title 3, the number of months the LEP/ELL student has been in the United States, the student's disability diagnosis, and if the student is Title 1.

**Student Achievement Level:** This report lists all students in a school or district along with the year of testing, content area, grade-level, achievement level, and MOSIS ID.

**Student Report:** For each school or district, this report contains the following information: student name, DOB, MOSIS ID, content area tested, grade level, achievement level, and scale score for each content area tested.

**EOC History Report:** This report lists the history of MO EOC completion for all students in the school or district.

## Chapter 9: Summary Statistics

### 9.1. Introduction

This chapter provides descriptive statistics for the number correct raw score and scale scores for each of the eight MO EOC Assessments from the Fall 2016 administration and for each of the nine MO EOC Assessments from the Summer 2016 and Spring 2017 administrations. Statistics include n-counts, means, standard deviations (SD), minimum and maximum values, and a variety of data disaggregation.

### 9.2. Descriptive Statistics

#### 9.2.1. Total Raw Score

Table 9.1 summarizes the descriptive statistics for total raw score (RS) by test administration (test period) and content area. The information includes the total number of students who took the particular MO EOC Assessment (n-count), the number of items and possible points, the observed minimum and maximum scores, and mean and standard deviation of raw scores.

**Table 9.1. Descriptive Statistics for Total Raw Score**

Test Period	Content Area	N-Count	#Items	#Pts.			Mean	SD
				Possible	Min.	Max.		
Summer 2016	English II	321	38	45	4	42	24.06	8.82
	Algebra I	828	44	50	4	49	19.79	8.28

### 9.2.3. Scale Scores

Table 9.5 summarizes the descriptive statistics of scale scores for each MO EOC Assessment by administration. The scale score range is 100 to 250 for every content area. Table 9.6 then summarizes the minimum scale score needed to obtain each level of achievement. As shown in the table, the cut scores for the achievement levels of Proficient and Advanced are 200 and 225, respectively, for each content area.

The mean scale score data in Table 9.5 may be reviewed in light of the Proficient cut score of 200. The results for the Summer administration show three of the nine content areas had mean scale scores of 200 or higher (i.e., Algebra I, Government, and American History). The results for Fall show that six content areas had mean scale scores of 200 or higher. English II, Biology, and American History had mean scores very close to 200. For Spring, seven content areas had mean scale scores of 200 or higher; American History and Physical Science had mean scale scores greater than 190. The results indicate that student performance is higher in the Spring and Fall administrations compared to the Summer where the test taking populations are much smaller than the other two administrations.

The number and percentage of students in each achievement level by content area from 2008–2009 to 2016–2017 are provided in Table E.2 as part of the executive summary.

**Table 9.5. Descriptive Statistics of the Scale Scores**

Test Period	Content Area	N-Count	Min.	Max.	Mean	SD
Summer 2016	English II	321	152	242	194.63	17.06

Test Period	Content Area	N-Count	Min.	Max.	Mean	SD
Summer 2016	Algebra I	828	153	250	201.05	17.54
	Biology	245	100	250	186.07	22.15

Physical Science	168	200	225

#### 9.2.4. By Demographic Group

Descriptive statistics of scale scores and percentage distributions of students' achievement levels by demographic groups are summarized in Appendix E and Appendix F. The results are only reported for groups with 10 or more students. The demographic variables included are gender, ethnicity, migrant status, free and reduced lunch (FRL), limited English proficient (LEP), Title I, individualized education program (IEP), and accommodations.

### 9.3. Performance Level Results

The results of the Spring administration were reviewed with the TAC on July 27, 2017 during a conference call. Special attention was given to the English II and Algebra I results, both of which had a reduced percent of students in the Proficient + Advanced performance level classification. Specifically, the percent of English II students achieving the Proficient + Advanced level was 71.3 for Spring 2017 compared to 80.8 for Spring 2016 (a decline of 9.5%) and the percent of Algebra I students achieving the Proficient + Advanced level was 60.4 for Spring 2017 compared to 67.4 for Spring 2016 (a decline of 7.0%).

The TAC concluded that form effects were present for English II and Algebra I. Form H was administered in the Spring 2015 and 2017 and Form G was administered in the Spring 2016. The Spring 2017 results show a slight decline in students achieving the Proficient + Advanced level compared to the Spring 2015 results (a 3.2% decline for English II and a 2.4% decline for Algebra I).

Both content areas were included in a recalibration study conducted in 2016 and reviewed by the TAC. Refer to Section 7.3.2 for a description of the Biology Assessment recalibration study. Although the recalibration results produced reasonable cut scores for English II, the cut scores for Algebra I were not reasonable so no action was taken at that time. During the July meeting, the TAC generally favored lowering the Proficient cut scores by one raw score point so students and districts would not be disadvantaged by the form effect. Soon after the July TAC meeting, DESE asked Questar to compute impact results if the cut scores for all performance levels were lowered by one point.

#### 9.3.1. English II

Table 9.7 shows the impact data for the original RSS table and the adjusted RSS table if the cut scores were lowered by one point for English II. The raw score range for each performance level, student counts, and percent of students at each performance level are provided for the original and adjusted results. The percent of students at the Proficient + Advanced level increased by almost four percent (71.3 to 75.2%) when the adjusted cut scores were applied.

**Table 9.7. Performance Level Results for English II**

Performance Level	Original RSS Results			Adjusted RSS Results		
	Raw Score	N-Count	Percent	Raw Score	N-Count	Percent
Below Basic	0–18	3,576	5.8	0–17	2,823	4.6
Basic	19–27	14,098	22.9	18–26	12,425	20.2
Proficient	28–37	34,148	55.4	27–36	32,962	53.5
Advanced	38–45	9,772	15.9	37–50	13,384	21.7

Performance Level	Original RSS Results			Adjusted RSS Results		
	Raw Score	N-Count	Percent	Raw Score	N-Count	Percent
Below Basic + Basic		17,674	28.7		15,248	24.8
Proficient + Advanced		43,920	71.3		46,346	75.2
<b>Total</b>		<b>61,594</b>	<b>100.0</b>		<b>61,594</b>	<b>100.0</b>

### 9.3.2. Algebra I

Table 9.8 shows the impact data for the original RSS table and the adjusted RSS table if the cut scores were lowered by one point for Algebra I. The percent of students at the Proficient + Advanced level increased by almost four percent (60.4 to 64.2%) when the adjusted cut scores were applied.

**Table 9.8. Performance Level Results for Algebra I**

Performance Level	Original RSS Results			Adjusted RSS Results		
	Raw Score	N-Count	Percent	Raw Score	N-Count	Percent
Below Basic	0–16	12,392	20.5	0–15	10,153	16.8

Proficient	22–34	25,069	41.4	21–33	25,822	42.6
Advanced	35–50	11,520	19.0	34–50	13,050	21.5
Below Basic + Basic		23,993	39.6		21,710	35.8
Proficient + Advanced		36,589	60.4		38,872	64.2
<b>Total</b>		<b>60,582</b>	<b>100.0</b>		<b>60,582</b>	<b>100.0</b>

### 9.3.3. Historic Impact Data

Tables 9.9 and 9.10 show longitudinal impact data from the Fall 2014 to the Spring 2017 administrations for English II and Algebra I, respectively. The last column of each table (SPR Adj Cuts) presents the results for lowering each performance level cut score by one raw score point. Spring Form H and Spring Form G are highlighted in different shades of grey to indicate the different form versions. The results for Spring 2017 using the adjusted cut scores were more consistent with the results observed for the Spring 2015 administration for both content areas.

**Table 9.9. Percent of Students at Each Performance Level: English II**

Performance Level	2014–2015		2015–2016			2016–2017			
	FALL Form G	SPR Form H	SUM Form G	FALL Form H	SPR Form G	SUM Form G	FALL Form G	SPR Form H	SPR Adj Cuts

*9.3.4. Accountability*

The results of these analyses were discussed during the August 17-18 TAC meeting. The TAC considered whether the 2016-2017 results for Algebra I and English II were valid for use in the state accountability program. The TAC considered several possible courses of action. In the end, the consensus TAC recommendation was for DESE to exclude the results for English II and Algebra I in the accountability program for 2016-2017. Following the TAC’s recommendation, DESE will not use the results for English II and Algebra I for accountability purposes for the 2016-17 school year.

## Chapter 10: Reliability

### 10.1. Introduction

DESE is required to ensure that the instruments used to measure student achievement for school accountability provide reliable results. As Standard 2.0 of the *Standards for Educational and Psychological Testing* states “Appropriate evidence of reliability/precision should be provided for the interpretation for each intended score use” (p. 42). This chapter provides evidence that scores from the MO EOC Assessments measure student achievement in a reliable manner<sup>11</sup> and that the size of the measurement error associated with reported test scores is reasonable<sup>12</sup>, especially at the Proficient cut score.

### 10.2. Reliability

#### 10.2.1. Defining Reliability

According to the *Standards for Educational and Psychological Testing* and consistent with the measurement literature, reliability is defined two different ways:

First, the term has been used to refer to the reliability coefficients of classical test theory, defined as the correlation between scores on two equivalent forms of the test, presuming that taking one form has no effect on performance on the second form. Second, the term has been used in a more general sense, to refer to the consistency of scores across replications of a testing procedure, regardless of how this consistency is estimated or reported. (p. 33)

In general, reliability refers to the consistency of student test scores, or the extent to which an assessment yields the same results repeatedly. Reliability considers random error, which results from outside influences that can affect a student’s score. An assessment that produces highly consistent, stable results (i.e., mostly free from random error) is considered highly reliable. The less random error, the more reliable the test scores are. The more reliable the assessment scores are, the more consistent a student’s test scores will be if the student takes a replicated version of the test (i.e., a test that has different items but that covers the same topics using the same number of items per topic.) Reliability can be estimated via the correlation of scores on forms assumed to be parallel (equivalence reliability), from test-retest data (stability reliability), or from a single test administration (internal consistency reliability).

#### 10.2.2. Reliability Coefficient

Classical test theory (CTT) provides a means for quantifying reliability. In CTT, an observed measurement, such as test score ( $X$ ) is defined as a composite of true score ( $T$ ) and an associated random error component ( $E$ ):

$$X = T + E.$$

---

<sup>11</sup> **Standard 2.3:** For each total score, subscore, or combination of scores that is to be interpreted, estimates of relevant indices of reliability/precision should be reported (p. 43).

<sup>12</sup> **Standard 2.13:** The standard error of measurement, both overall and conditional (if reported), should be provided in units of each reported score (p. 45).

The definitions and assumptions in CTT lead to several important properties. For example, it can be demonstrated that observed score variance equals the sum of (1) the variance in true scores—true individual differences in the attribute being measured, and (2) the variance from random fluctuations due to the imperfections in the measurement process (error variance).

$$\sigma_x^2 = \sigma_t^2 + \sigma_e^2$$

Normally a covariance term is required when adding variances, but it is not in this case as true scores and errors are assumed to be uncorrelated in CTT. The reliability coefficient expresses the consistency of test scores as the ratio of true-score variance to total observed-score variance.

$$\rho_{x_1x_2} = \frac{\sigma_t^2}{\sigma_x^2}$$

Reliability coefficients theoretically range from 0.0 to 1.0, although the extremes are never achieved in applied testing programs. Larger coefficients are more desirable because they indicate that test scores are less influenced by random error. If all test score variance were true, the scores would be perfectly consistent and the index would equal 1.0. The index would be 0.0 if none of the test score variance were true. Such scores would be pure random noise (i.e., all measurement error).

### 10.2.3. Estimating Reliability

The reliability of a specific test cannot be directly estimated from the equation above. Although several different reliability indices exist, an industry-standard index for describing internal consistency reliability based on a single test administration is coefficient alpha (Cronbach, 1951), which provides an estimate of reliability that is mathematically equivalent to the average of all possible split-half reliability estimates computed by the Rulon method. For a test consisting of  $p$  items, in which the item scores  $Y_j$  are summed to get a total score  $X$ , coefficient alpha is computed as follows:

$$\alpha = \left( \frac{p}{1-p} \right) \left( 1 - \frac{\sum_{j=1}^p \sigma_{Y_j}^2}{\sigma_X^2} \right)$$

### 10.2.4. Interpretation Considerations

Coefficient alpha indicates the internal consistency of the responses over a set of items measuring an underlying trait, in this case, academic achievement in the MO EOC content tests. As an internal consistency index, it can be conceptualized as indicating the extent to which an exchangeable set of items from the same domain would result in a similar rank ordering of students.

Relative error is reflected by coefficient alpha. Further, coefficient alpha is only sensitive to random errors due to the sampling of items. It does not take into account other random sources of error (e.g., variations associated with the linking process; daily fluctuation in student health and behavior, the testing environment; rater inconsistency).

### 10.3. Reliability Evidence

Reliability evidence for the 2016–2017 MO EOC Assessments includes the following:

- Internal consistency
- Standard error of measurement (SEM) for raw scores
- Conditional standard error of measurement (CSEM) for Scale Scores
- Classification accuracy and consistency
- Rater agreement (presented in Section 6.6)

#### *10.3.1. Standard Error of Measurement (SEM) for Raw Scores*

No test provides a perfect measure of a student’s ability because all tests have a known standard error of measurement (SEM). The SEM represents the amount of variability that can be expected in a student’s test score because of the inherent imprecision of the test. For example, if the student were tested again with a new test of comparable difficulty, he or she would likely obtain a slightly different score. The expected range for this new score is provided as a standard error (SE) and gives an indication of the margin of error for the reported scale score.

##### *10.3.1.1. Traditional SEMs and Traditional Confidence Intervals (CIs)*

The SEM is defined as the standard deviation of the distribution of observed scores for students with identical true scores. The standard deviation is a measure of the dispersion of the observed scores; for the normal distribution, about 32 percent of observations are more than one standard deviation above or below the mean.

The SEM formula:

$$SEM = \sigma_x \sqrt{1 - \alpha}$$

indicates that the value of the SEM depends on both the reliability coefficient and the standard deviation of test scores.

SEMs allow statements regarding the overall precision of test scores. SEMs help place “reasonable limits” (Gulliksen, 1950) around observed scores through construction of an approximate score band or confidence intervals (CIs). These bands are constructed by taking the observed scores,  $X$ , and adding and subtracting a multiplicative factor of the SEM. As an example, students with a given true score will have observed scores that fall between  $\pm 1$  SEM about two-thirds of the time.

##### *10.3.1.2. Reliabilities and SEMs by Student Subgroup*

Separate analyses were performed for each EOC content area. Tables 10.1 – 10.25 provide the reliabilities and SEMs for the total population and for select student subgroups. For each table, the effect size, reliability, and SEM are reported for each group provided there were at least 50 students in the group.

In large-scale state summative assessments, reliabilities from the mid 0.80s to the low 0.90s are common. The reliabilities for all students were within the range of 0.85 to 0.91 for the tests across the three administrations, with three exceptions. The reliabilities for American History for

the Summer administration, and English I and Physical Science for the Spring 2017 administration were 0.83, 0.84 and 0.78, respectively. The majority of SEMs were lower than 3.0, with only the Algebra I and Biology assessments having SEMs greater than 3.0. The SEMs range from a low of 2.62 for the Fall and Spring Government tests and for the Spring English II test to a high of 3.43 for the Summer and Fall Biology tests. These results indicate acceptable reliability and measurement precision for the MO EOC tests.

An effect size is reported within each group, provided minimal sample size requirements are met. The effect size is a measure of how much the scores of two groups of students differ from each other. It is based on score standard deviations, and calculated using Cohen’s *d* equation:

$$d = \frac{\bar{X}_F - \bar{X}_R}{\hat{\sigma}_X}$$

where the numerator is the difference in average scores between a focal and a reference group, and the denominator is an estimate of total score standard deviation. In this case, the standard deviations across groups were pooled to generate the standard deviation estimate.

An effect size of 1.0 is equivalent to a difference of one standard deviation. An effect size of .8 is considered “large;” an effect size of .5 is considered “medium;” an effect size of .2 is considered “small.” Effect sizes are also reported whenever the reference and focal groups each have a minimum of 50 students.

Following EOC program convention, the reference groups are gender = Male, ethnicity = White, LEP status = no, IEP status = no, Migrant status = no, FRL status = no, Title 1 status = no, and Accommodations status = no.

*10.3.1.3. Interpretation Considerations*

The SEM approach only provides a single numerical estimate for constructing confidence intervals for examinees regardless of their score level. In reality, such confidence intervals vary according to a student’s score. Consequently, care should be taken using the SEM for students with extreme scores. Because test reliabilities and standard deviations are group specific, the same is true for SEMs and CIs. For the MO EOC, the SEM approach is calculated using raw scores, and as such, the resulting confidence interval bands are in the raw-score metric.

### 10.3.2. Conditional Standard Error of Measurement (CSEM) for Scale Scores

#### 10.3.2.1. CSEMs and Conditional CIs

According to the *Standards for Educational and Psychological Testing*, Standard 2.14 states:

When possible and appropriate, conditional standard errors of measurement should be reported at several score levels unless there is evidence that the standard error is constant across score levels. Where cut scores are specified for selection or classification, the standard errors of measurement should be reported in the vicinity of each cut score. (p. 46)

This section describes the calculation of the CSEMs. As noted below, the CSEMs for each scale score are presented in Appendix D and the CSEMs at the Proficient cut are presented in Table 10.27.

Rasch-based CSEMs are also used for the MO EOC assessments. CSEMs also allow statements regarding the precision of individual test scores by helping derive reasonable limits around observed scaled scores through construction of approximate score bands, referred to as conditional confidence intervals (CIs). Any given test will have CSEMs that vary as a function of the scaled scores. This makes the CSEM especially useful in characterizing measurement precision around a score level used for decision making, such as a cut score used for identifying students who meet a given performance standard.

MO EOC CSEMs come from the Winsteps program and are based on the principle of statistical information. The CSEM at any given point on the ability ( $\theta$ , theta) continuum is defined as the reciprocal of the square root of the test information function derived from the Rasch scaling model. In the formula,  $CSEM(\hat{\theta})$  is the conditional standard error of measurement, and  $I(\hat{\theta})$  is the test information function:

$$CSEM(\theta) = \frac{1}{\sqrt{I(\theta)}}$$

Test information depends on the sum of the corresponding information functions for the test items. Item information depends on each item's unique conditional item score variance as determined from its difficulty parameters and conditional item score variance. The formula provides the CSEMs on the Rasch ability ( $\theta$ ) metric.

#### 10.3.2.2. CSEMs at the Proficient Cut

CSEMs are useful for characterizing measurement precision in the neighborhood of score levels used for decision making, such as cut scores at various achievement levels. The CSEMs for the Proficient cut scores for the MO EOC Assessments are presented in Table 10.27. The CSEM values were either 5 or 6 for English II, and consistently 6 for Biology and English I; 7 for Algebra I, Geometry and Government; 8 for Algebra II and Physical Science; 9 for American History across the three administrations. CSEMs for the other scale scores are reported in Appendix D. Note that CSEMs are smaller in the middle of the score distribution than at the extremes. This pattern is expected for CSEMs based on item response theory (IRT).

**Table 10.27. CSEMs at the Proficient Cut Score**

Test Period	Content Area	SS Cut*	CSEM

\*See Appendix D for the CSEM at each scale score.

### 10.3.3. Classification Accuracy and Consistency

In accountability testing programs, there is great interest in knowing how accurately students are classified into performance categories. Two sets of analyses are presented. Classification accuracy describes the extent to which examinees are classified in the same way as they would be on the basis of the average of all possible forms of a test. Classification consistency describes the extent to which examinees are classified in the same way as they would be on the basis of a single form of a test other than the one for which data are available. Classification accuracy and classification consistency are relevant to Standard 2.16 of the *Standards for Educational and Psychological Testing*.

When a test or combination of measures is used to make classification decisions, estimates should be provided of the percentage of test takers who would be classified in the same way on two replications of the procedure. (p. 46)

Tables 10.28 and 10.29 illustrate the decision tables for two and four performance levels, respectively. The proportion of consistent decisions,  $\phi$ , is computed by taking the sum of the diagonal entries, which indicate the proportion of students classified into the same performance level by the two forms. The results presented in this section show that, overall, the classification accuracy and consistency statistics provide additional support that the MO EOC Assessments have good measurement precision and sound psychometric properties.

**Table 10.28. Decision Table for Two Performance Levels**

		Test One		
		Level I	Level II	Marginal
Test Two	Level I	$\phi_{11}$	$\phi_{12}$	$\phi_{1\bullet}$
	Level II	$\phi_{21}$	$\phi_{22}$	$\phi_{2\bullet}$
	Marginal	$\phi_{\bullet 1}$	$\phi_{\bullet 2}$	1

**Table 10.29. Decision Table for Four Performance Levels**

		Test One				
		Level I	Level II	Level III	Level IV	Marginal
Test Two	Level I	$\phi_{11}$	$\phi_{12}$	$\phi_{13}$	$\phi_{14}$	$\phi_{1\bullet}$
	Level II	$\phi_{21}$	$\phi_{22}$	$\phi_{23}$	$\phi_{24}$	$\phi_{2\bullet}$
	Level I	$\phi_{31}$	$\phi_{32}$	$\phi_{33}$	$\phi_{34}$	$\phi_{3\bullet}$
	Level II	$\phi_{41}$	$\phi_{42}$	$\phi_{43}$	$\phi_{44}$	$\phi_{4\bullet}$
	Marginal	$\phi_{\bullet 1}$	$\phi_{\bullet 2}$	$\phi_{\bullet 3}$	$\phi_{\bullet 4}$	1

The proportions of consistent decisions,  $\phi$ , for two and four categories are computed by the following two formulas, respectively:

$$\phi = \phi_{11} + \phi_{22}$$

$$\phi = \phi_{11} + \phi_{22} + \phi_{33} + \phi_{44}$$

The Livingston and Lewis (1995) methodology was used to provide estimates of classification accuracy and classification consistency. The BB-CLASS software program (Brennan, 2004a) was used to compute the results.

For classification accuracy, the Livingston and Lewis procedure compares the actual observed score distribution with the true score distribution predicted from the model (Brennan, 2004b). In the classification accuracy tables, the rows represent category true scores and columns represent expected observed scores for the categories under the model. The probability of a correct classification is the sum of the diagonal. The false negative rate is calculated from the sum of the lower off-diagonal values, while the false positive rate is calculated from the sum of the upper off-diagonal values.

For classification consistency, the Livingston and Lewis procedure compares the actual observed score distribution with the observed score distribution for an alternate form predicted from the model. In the classification consistency tables, the rows and columns represent the expected observed scores for categories in the model. Three indices are provided: the proportion of consistent decisions, the chance proportion of decisions, and kappa.

### 10.3.3.1. *Classification Accuracy Results*

The results in Tables 10.30 – 10.32 show the classification accuracy for two performance levels (Below Basic and Basic vs. Proficient and Advanced) for each MO EOC Assessment by administration. The probability of correct classification results show the estimates were between 0.87 and 0.92 for the assessments, with the exception of 0.75 for the Physical Science Summer administration ( $n=11$ ). The results in Tables 10.33 – 10.35 show the classification accuracy for four performance levels (Below Basic, Basic, Proficient, and Advanced) for each MO EOC Assessment by administration. The probability of correct classification estimates ranged from 0.70 for the Algebra I and American History Summer 2016 and Geometry Spring 2017 assessments to 0.81 for the Biology Summer 2016 assessment. As expected, the higher number of performance levels resulted in lower consistency because there is more opportunity for misclassification. The classification accuracy results suggest that accurate performance level classifications are being made for students taking the MO EOC Assessments.

### 10.3.3.2. *Classification Consistency Results*

Tables 10.36 – 10.38 display the classification consistency for two performance levels (Below Basic and Basic vs. Proficient and Advanced) for each MO EOC Assessment by administration. The proportions of consistent decisions are between 0.83 and 0.88 across the content areas and administrations, with the exception of the Physical Science Summer assessment ( $n=11$ ) which had an estimate of 0.66. The chance proportions of consistent decision classification were in the 0.50 to 0.59 range. Since there are only two classifications, the chance of correctly classifying students is quite high. All kappa values were between 0.64 and 0.75, with the exception of the Physical Science Summer assessment which had an estimate of 0.29.

Tables 10.39 – 10.41 display the classification consistency results for four performance levels (Below Basic, Basic, Proficient, and Advanced) for each MO EOC Assessment by administration. The proportions of consistent decision classification ranged from 0.60 to 0.74. With four performance levels, the chance proportions of consistent decisions were lower, with estimates between 0.25 and 0.50. All kappa values were between 0.44 and 0.61, with the exception of the Physical Science Summer assessment which had an estimate of 0.28. Consistent with the classification accuracy results, the results for the two performance levels demonstrated greater precision in classifying students compared to the results for the four performance levels because there is greater opportunity for misclassification. The classification consistency results suggest that consistent performance level classifications are being made for students taking the MO EOC Assessments.

## Chapter 11: Validity

### 11.1. Introduction

Validity is the most fundamental consideration in educational and psychological testing. It refers to “the degree to which evidence and theory support the interpretations of test scores for proposed uses of tests” (AERA, APA, & NCME, 2014, p. 11). According to the *Standards for Educational and Psychological Testing*,

Ultimately, the validity of an intended interpretation of test scores relies on all the available evidence relevant to the technical quality of a testing system...[this includes] evidence of careful test construction; adequate score reliability; appropriate test administration and scoring; accurate score scaling, equating, and standard setting; and careful attention to fairness for all test takers, as appropriate to the test interpretation in question. (p. 22)

This chapter summarizes the validity evidence as it relates to the purpose and intended use of the MO EOC test results (refer to Section 1.3 of this technical report). It begins with validity evidence related to test content in terms of the adequacy and appropriateness of the MO EOC Assessments for measuring progress on the Missouri Learning Standards. Validity evidence based on the internal structure of the MO EOC Assessments is then provided through a correlational analysis of MO EOC Assessment content clusters. References to specific standards are provided where appropriate.

While this chapter summarizes evidence that supports claims about the validity and uses of the MO EOC Assessment scores, this entire technical report provides evidence related to the validity argument. Some of this evidence is cross-referenced. The procedural and empirical evidence available, along with the rationale presented in this chapter, provide support for the standards-based interpretations of the MO EOC Assessments.

Since test forms used in the 2016–2017 testing year were intact forms that had been previously administered, relevant information documented in previous technical reports is included in this chapter to provide historical information and to assist with the construction of the validity argument for the MO EOC Assessment scores.

### 11.2. Validity Evidence

#### 11.2.1. Content Validity

Baker and Linn (2002) suggest that “Two questions are central in the evaluation of content aspects of validity. Is the definition of the content domain to be assessed adequate and appropriate? Does the test provide an adequate representation of the content domain the test is intended to measure?” (p. 6). The following sections help answer these two questions and address Standard 4.12<sup>13</sup>, which specifically relates to the definition and development of test content.

---

<sup>13</sup> **Standard 4.12:** Test developers should document the extent to which the content domain of a test represents the domain defined in the test specifications (p. 89).

#### *11.2.1.1. Appropriateness of Content Definition*

In 1993, the Missouri legislature passed the Outstanding Schools Act (Senate Bill 380), requiring the State Board of Education to adopt challenging academic performance standards that define the skills and competencies necessary for students to successfully advance through the public school system, prepare for post-secondary education and the workplace, and participate as citizens in a democratic society. The Missouri State Board of Education formally adopted the academic standards known as the Show-Me Standards in January 1996.

In addition to mandating the development of rigorous academic standards, the Outstanding Schools Act of 1993 required the development and implementation of a comprehensive, primarily performance-based assessment program to measure student proficiency in the knowledge, skills, and competencies identified in the standards. Upon adoption of the standards in 1996, Missouri began developing the Missouri Assessment Program (MAP).

In January 2007, the Missouri State Board of Education approved a plan to replace the MAP for high school students, beginning in August of the 2008–2009 school year, with MO EOC Assessments in English II, Algebra I, and Biology. The remaining MO EOC Assessments (English I, Algebra II, Geometry, Government, and American History) were added the following year. The intent was to provide MO EOC Assessments that are an integral part of the statewide assessment system and, as such, are a logical extension of MAP Grade-Level Assessments.

#### *11.2.1.2. Adequacy of Content Representation*

Adequacy of the content representation of the MO EOC Assessments is important because the tests must provide an indication of student progress toward achieving the knowledge and skills identified in the Missouri Learning Standards and they must fulfill the requirements of the Every Student Succeeds Act (ESSA).

The MO EOC Assessments assess students' progress toward the Missouri Learning Standards, which are Missouri's content standards. Adequate representation of the content domains defined in the content standards is assured through the use of a test blueprint and a documented test construction process. The content standards were taken into consideration in the writing of SR items. Evidence to support the content validity of the MO EOC Assessments was provided in Chapter 2 through the documentation of the test specifications and blueprints, item-writing processes, and item-review processes. Specific efforts to ensure content validity are summarized below.

- Items were developed to include a wide array of contexts and cultures.
- Detailed test and item/passage development specifications were established; tests included sufficient numbers of items; and items were adequately distributed across content, levels of cognitive complexity, and difficulty.
- Qualified item writers were provided training.
- Each newly developed item was first reviewed by content specialists and editors to make sure that all items were aligned with the content standards. Appropriateness for the intended grade was also considered, as well as depth of knowledge, graphics, grammar/punctuation, language demand, and distractor reasonableness.

- Missouri teachers from diverse ethnic and geographical backgrounds reviewed the items to ensure all items were accessible to as many students as possible.
- Missouri teachers were trained to create clear and simple instructions.
- Content and bias review committees reviewed the items following specific criteria.

Additional evidence to support the content validity of the MO EOC Assessments was provided in Chapter 2. Chapter 2 outlines the target strand and content standard point distributions on the English II, Algebra I, Biology, English I, Algebra II, Geometry, Government, American History and Physical Science operational forms.

#### *11.2.1.3. Summary of Alignment Studies*

Each assessment must align with and proportionally represent the subdomains of the test blueprint. Following development of all MO EOC Assessments prior to 2014–2015, DESE contracted for external studies to support the alignment of the assessments to the Show-Me Standards and CLEs. Results of those studies are available for review at <http://dese.mo.gov/college-career-readiness/assessment/assessment-technical-support-materials>.

To summarize, the alignment studies evaluated whether the assessments represent the full range of content standards and measure student knowledge in the manner and at the level of complexity specified by the content standards. Both studies investigated alignment for English II, Algebra I and Biology.

The first study evaluated the alignment of a single form for the Spring and Summer 2009 Assessments (Taylor, Webb, Koger, Koger, & Thacker, 2009). The results indicated that the forms were fully aligned for most criteria. All content area tests fell short of achieving the cognitive complexity specified in the standards on one or both forms. In addition, the Biology forms were partially aligned for the range of knowledge that is represented on the form.

The second study evaluated the alignment of a single form for the Fall 2009, Summer 2010, and Spring 2011 assessments (Taylor, Campbell, Deatz, Dvorak, Koger, & Thacker, 2011). The results indicated that the 2009 forms were partially or fully aligned to the standards for all criteria. When considering the multiple-choice items only, the Biology forms were partially aligned for all criteria. The Algebra I forms were fully aligned for all criteria with the exception of partial alignment for DOK on two of the three forms. The English II forms were partially aligned for all criteria with the exception of weak alignment for DOK on two of the three forms.

#### *11.2.2. Internal Structure*

The item analyses shown in Appendix C revealed that the MO EOC Assessments have sound psychometric properties. The  $p$ -value ranges were sufficiently broad, indicating that the items measure achievement across a broad range of difficulty. Item-test correlations, indicators of item discrimination, are also provided. Almost all items had acceptable discrimination values (i.e., discrimination values  $> 0.15$ ). Some extremely difficult items had low discrimination values that were likely attenuated by their difficulty.

Empirical investigation of DIF strengthens the validity evidence related to score interpretations for students in particular groups by evaluating potential sources of construct-irrelevant variance.

DIF results might be better considered as internal—structure validity evidence. Statistical analyses results are provided in Chapter 4. The results indicated that none of the PE/WP items were flagged for DIF and that either no or very few SR items were flagged for DIF across subjects and administrations.

Standard 1.13<sup>14</sup> pertains to the relationships between the parts of the test. Because the MO EOC Assessments measure student performance in several content areas, it is important to study the pattern of relationships among the content domains and clusters.

Tables 11.1 – 11.8 summarize correlation coefficients among test domains and clusters for English II, Algebra I, Biology, Algebra II, Geometry, Government, and Physical Science.<sup>15</sup> Because the correlation coefficients will be affected by the limited number of items measuring each domain, the correlation coefficient between two content standard clusters may be artificially low because of measurement error. Therefore, the correlations are corrected for attenuation. The formula for the correlation coefficient statistically corrected for attenuation ( $r_{ca}$ ) is Spearman's formula

$$r_{ca} = \frac{r_{xy}}{\sqrt{r_{xx}r_{yy}}}$$

Where  $r_{xy}$  is the correlation between content clusters,  $r_{xx}$  is the reliability of one content cluster, and  $r_{yy}$  is the reliability of the other content cluster.

The tables report the Pearson correlations below the diagonal, the correlations corrected for attenuation above the diagonal, and Cronbach's coefficient alpha of the cluster scores on the diagonal in bolded text.

The corrected correlations between clusters within each assessment are strong ( $> 0.70$ ), with many correlations approaching or exceeding 0.90. The corrected correlations for the English Reading and Writing clusters tended to be lower, ranging from 0.49 for Summer 2016 to 0.78 for Fall 2016 assessment. The uncorrected correlations were observed to be in the moderate (0.30 to 0.70) to strong range, indicating the expected relationships between the clusters.

Each content area test is comprised of two or more content clusters measuring a single construct or dimension. These results suggest that the cluster scores are appropriately related to each other. Therefore, the results provide evidence that a unidimensional construct is measured on each of the MO EOC Assessments supporting the validity of the test construct.

---

<sup>14</sup> **Standard 1.13:** If the rationale for a test score interpretation for a given use depends on premises about the relationships among test items or among parts of the test, evidence concerning the internal structure of the test should be provided (p. 26–27).

<sup>15</sup> Because American History has only one content cluster, correlation coefficients were not calculated.

### 11.2.3. Convergent and Divergent Validity

Convergent validity examines the extent to which theoretically related constructs are empirically related, whereas divergent validity examines the extent to which theoretically unrelated constructs are empirically unrelated. The Standards state the following regarding convergent and divergent validity: “Relationships between test scores and other measures intended to assess the same or similar constructs provide convergent evidence, whereas relationships between test scores and measures purportedly of different constructs provide discriminant evidence” (AERA, APA, & NCME, 2014, p. 16–17). The MO EOC Assessments were designed to measure different constructs, as shown by both the standards they assess and the content coverage detailed in the test blueprints.

#### 11.2.3.1. *Pearson Correlations Among Assessments*

Table 11.9 shows evidence of divergent validity for the content areas with both SRs and PE/WPs. The data sets used for the analysis were drawn from the Spring 2017 operational test administration. The students in the data sets were merged using Missouri’s unique student identification number. Any student who took at least two of the three operational tests was included in the correlations. Table 11.9 shows the Pearson correlation coefficients between scale scores for Spring 2017. Evidence of divergent validity is supported by the lower correlations between content areas that measure dissimilar constructs. For example, the correlation between English II and Algebra I (0.58) is in a range typical of achievement constructs that are positively related primarily by virtue of their relation to general school achievement.

For English II and Biology, challenging language and reading on both tests could account for the higher correlation (0.74). This correlation value is in the range of the correlations among high school MAP content area tests (the precursor to the MO EOC Assessments) as reported in the Missouri Assessment Program Technical Report, 2008 (Missouri Department of Elementary and Secondary Education, 2008).

**Table 11.9. Pearson Correlation Among Assessments with PEs—Spring 2017**

	English II	Algebra I	Biology	English I
English II	1.00	0.58	0.74	0.78
Algebra I	0.58	1.00	0.69	0.55
Biology	0.74	0.69	1.00	0.73
English I	0.78	0.55	0.73	1.00

The data presented in Table 11.10 show evidence of divergent validity for the content areas with only SR items. The data sets used for the analysis were drawn from the Spring 2017 operational test administration. The student records in the data sets were merged using Missouri’s unique student identification number. Any student who took at least two of the five operational tests was included in the correlations. Table 11.10 shows the Pearson correlation coefficients between scale scores.

**Table 11.10. Pearson Correlation Coefficients Among Assessments with only SRs—Spring 2017**

	Algebra II	Geometry	Government	Am. History	Physical Science
Algebra II	1.00	0.75	0.56	0.46	0.58
Geometry	0.75	1.00	0.53	0.53	0.61
Government	0.56	0.53	1.00	0.85	0.82
Am. History	0.46	0.53	0.85	1.00	0.65
Physical Science	0.58	0.61	0.82	0.65	1.00

The results shown in Table 11.10 contain evidence of divergent validity. Evidence of divergent validity is supported by the lower correlations between content areas that measure dissimilar constructs as compared to content areas that assess similar constructs. For example, the correlations between the similar constructs of Algebra II and Geometry (0.75), and Government and American History (0.85) are higher than the correlations between the dissimilar constructs of Algebra II and American History (0.46).

Table 11.11 provides more evidence of discriminant validity with correlations between content areas with PE/WPs (rows) and content areas with only SR items (columns). Evidence of discriminant validity emerges when comparing correlations between the similar contents of Algebra I and Geometry (0.82), Algebra I and Algebra II (0.62), and Biology and Physical Science (0.78), as well as the dissimilar contents of English II and Algebra II (0.47) and English II and Geometry (0.52).

**Table 11.11. Pearson Correlation Among Assessments**

	Algebra II	Geometry	Government	Am. History	Physical Science
English II	0.47	0.52	0.75	0.65	0.65
Algebra I	0.62	0.82	0.62	0.47	0.59
Biology	0.60	0.63	0.76	0.67	0.78
English I	0.50	0.52	0.71	0.64	0.59

#### *11.2.3.2. Convergent and Divergent Study*

To gather validity evidence for the MO EOC assessments, DESE commissioned a full convergent and divergent study. The relationships between the MO EOC Assessments across the

2009, 2010, and 2011 administrations were examined using correlational data. Eight tests and three major groups comprised the Missouri EOC Assessments: English (English I, English II), mathematics (Algebra I, Algebra II, Geometry), and social studies (Government, American History). Biology was the only science subject.

The findings from the convergent validity evidence showed that the assessments within the major groupings were strongly related to each other. That is, strong correlations were found between the English I and English II test scores, and likewise for the mathematics and the social studies tests.

The findings from the divergent validity evidence showed that that assessments from other groupings were moderately related to each other. For example, the mathematics assessments were moderately related to the English and social studies assessments. There were a couple of exceptions. For example, the English and Government assessments showed strong relationships for some administrations, likely because both content areas involve a fair amount of reading. The results showed that, in general, the MO EOC Assessments are appropriately related to each other and measure their own content areas, regardless of when the tests are administered.

For the full report on this study, see the *2011–2012 MO EOC Technical Report*, Appendix B, at <http://dese.mo.gov/college-career-readiness/assessment/assessment-technical-support-materials>.

#### *11.2.4. Additional Validity Evidence*

Validity evidence related to other standards is described below.

- Standard 1.8<sup>16</sup> relates to the characteristics of the sample of test takers from which validity evidence is inferred. The sample of examinees from which the validity evidence for the MO EOC Assessments was referred to in Chapter 9 of this report. Section 10.3 report provides the raw score mean and standard deviation by demographic group Appendix E summarizes the descriptive statistics of scale scores, and Appendix F summarizes the percentage distributions of students' achievement levels by demographic group.
- Standard 1.9<sup>17</sup> relates to human judgment at various points in the test development and reporting process. For the MO EOC Assessments, human judgment was especially prevalent during the standard setting and cutpoint validation processes. When cut scores are critical to the interpretation of test results, the procedural validity of the processes used to establish those scores also should be addressed. Chapter 3 contains summary information about the standard setting procedures used for the MO EOC Assessments.

---

<sup>16</sup> **Standard 1.8:** The composition of any sample of test takers from which validity evidence is obtained should be described in as much detail as is practical and permissible, including major relevant sociodemographic and developmental characteristics (p. 25).

<sup>17</sup> **Standard 1.9:** When a validation rests in part on the opinions or decisions of expert judges, observers, or raters, procedures for selecting such experts and for eliciting judgments or ratings should be fully described. The qualifications and experience of the judges should be presented. The description of procedures should include any training and instructions provided, should indicate whether participants reached their decisions independently, and should report the level of agreement reached. If participants interacted with one another or exchanged information, the procedures through which they may have influenced one another should be set forth (p. 25).

Overall, the panelists' feedback from both workshops indicated that they understood the process and were comfortable with their cut score recommendations. Human judgment is also a component of handscoring. From Spring 2008 through Spring 2010 and again in 2014-2015 and 2015–2016, PE/WPs were handscored. Chapter 6 contains detailed information about the processes involved with Questar's handscoring of the 2015–2016 PE/WPs, including scorer selection and training.

- Standard 1.10<sup>18</sup> relates to the conditions under which the data used to support validity claims were collected. Chapter 5 contains information about how data were gathered in both the online and accommodated administrations, including the testing environment, materials distribution and security, Test Examiner training, student preparation, and allowable accommodations.

### 11.3. Summary

The validation process involves the ongoing collection of a variety of evidence to support the proposed test-score interpretations and uses. It is not an all-or-nothing property of a test; rather, evidence must be documented for a specific purpose and in the context of how the test scores will be interpreted and used. Much of the information contained in this technical report is validity evidence for the MO EOC Assessments' stated purposes. This chapter provided a summary of the evidence presented elsewhere in the technical report and provided some additional types of validity evidence relevant to the content and internal structure of the assessments.

The overall technical quality of the MO EOC Assessments, as demonstrated by technical information and statistics, was sound. The Spring 2008 and 2009 standalone field tests, the Spring 2009 and 2010 embedded field tests produced pools of technically sound items with more than a 90% retention rate after psychometric and content criteria were applied. From those pools, the intent was to construct forms that were psychometrically similar which helped support the pre-equating model that is in place. Application of item response theory (IRT) pre-equating resulted in congruent raw score to scale score conversions between the Summer, Fall, and Spring forms at the achievement level cut scores. However, it was evident from the Spring 2017 administration that there were form comparability issues for English II and Algebra I. Following the TAC's recommendation, DESE chose not to use the English II and Algebra I results for accountability purposes in 2016-17. New forms are being developed for the 2017-2018 administration year and subsequent years for English I, English II, Algebra I, Algebra II, and Geometry. During this process, steps are being taken to ensure form comparability.

Post-administration test analyses supported the technical quality of the MO EOC Assessments. Validity of score inferences is bolstered when test scores are consistent. Here, the reliabilities of the total test scores are very good, ranging from 0.78 to 0.91 across the content areas and administrations for the 2016–2017 test forms. CSEMs were between 5 and 9 scale score points at

---

<sup>18</sup> **Standard 1.10:** When validity evidence includes statistical analyses of test results, either alone or together with data on other variables, the conditions under which the data were collected should be described in enough detail that users can judge the relevance of the statistical findings to local conditions. Attention should be drawn to any features of validation data collection that are likely to differ from typical operational testing conditions and that could plausibly influence test performance (p. 26).

the Proficient cut scores. Additionally, DIF analyses conducted on gender and ethnicity help address construct-irrelevant variance, which presents a serious threat to the validity of inferences made from achievement test scores.

Table A.3. Target Point Distributions—Biology I

Big Idea	Concept	CLE	DOK Limit	Range of Points per CLE
<b>Characteristics and Interactions of Living Organisms Strand</b>				
There is a fundamental unity underlying the diversity of all living organisms	Organisms progress through life cycles unique to different types of organisms	Recognize cells both increase in number and differentiate, becoming specialized in structure and function, during and after embryonic development	1	1–2
	Cells are the fundamental units of structure and function of all living things	Describe the structure of cell parts (e.g., cell wall, cell membrane, cytoplasm, nucleus, chloroplast, mitochondrion, ribosome, vacuole) found in different types of cells (e.g., bacterial, plant, skin, nerve, blood, muscle) and the functions they perform (e.g., structural support, transport of materials, storage of genetic information, photosynthesis and respiration, synthesis of new molecules, waste disposal) that are necessary to the survival of the cell and organism	2	1–2
Living organisms carry out life processes in order to survive	The cell contains a set of structures called organelles that interact to carry out life processes through physical and chemical means	Explain physical and chemical interactions that occur between organelles (e.g., nucleus, cell membrane, chloroplast, mitochondrion, ribosome) as they carry out life processes	2	1–2
	Photosynthesis and cellular respiration are complementary processes necessary to the survival of most organisms on Earth	Explain the interrelationship between the processes of photosynthesis and cellular respiration (e.g., recycling of oxygen and carbon dioxide), comparing and contrasting photosynthesis and cellular respiration reactions (Do NOT assess intermediate reactions.)	2	1–2
		Determine what factors affect the processes of photosynthesis and cellular respiration (i.e., light intensity, availability of reactants, temperature)	2	1–2

Appendix A: Target Point Distributions

Big Idea	Concept	CLE	DOK Limit	Range of Points per CLE
Living organisms carry out life processes in order to survive	Cellular activities and responses can maintain stability internally while external conditions are changing (homeostasis)	Explain the significance of the selectively permeable membrane to the transport of molecules	2	1–2
		Predict the movement of molecules across a selectively permeable membrane (i.e., diffusion, osmosis, active transport) needed for a cell to maintain homeostasis given concentration gradients and different sizes of molecules	2	1–2
		Explain how water is important to cells (e.g., is a buffer for body temperature, provides a soluble environment for chemical reactions, serves as a reactant in chemical reactions, provides hydration that maintains cell turgidity, maintains protein shape)	2	1–2
There is a genetic basis for the transfer of biological characteristics from one generation to the next through reproductive processes	All living organisms have genetic material (DNA) that carries hereditary information	Describe the chemical and structural properties of DNA (e.g., DNA is a large polymer formed from linked subunits of four kinds of nitrogen bases; genetic information is encoded in genes based on the sequence of subunits; each DNA molecule in a cell forms a single chromosome) (Assess the concepts; do NOT memorize the nitrogen base pairs.)	1	1–2
		Recognize the DNA codes for proteins, which are expressed as the heritable characteristics of an organism.	1	1–2
		Identify possible external causes (e.g., heat, radiation, certain chemicals) and effects of DNA mutations (e.g., altered proteins which may affect chemical reactions and structural development)	2	1–2
There is a genetic basis for the transfer of biological characteristics from one generation to the next through reproductive processes	Chromosomes are components of cells that occur in pairs and carry hereditary information from one cell to daughter cells and from parent to offspring during reproduction	Recognize the chromosomes of daughter cells, formed through the processes of asexual reproduction and mitosis, the formation of somatic (body) cells in multicellular organisms, are identical to the chromosomes of the parent cell	1	1–2
		Recognize that during meiosis, the formation of sex cells, chromosomes are reduced to half the number present in the parent cell	1	1–2

Appendix A: Target Point Distributions

Big Idea	Concept	CLE	DOK Limit	Range of Points per CLE
		Explain how fertilization restores the diploid number of chromosomes	2	1–2
	There is heritable variation within every species of organism	Describe the advantages and disadvantages of asexual and sexual reproduction with regard to variation within a population	2	1–2
	The pattern of inheritance for many traits can be predicted by using the principles of Mendelian genetics	Predict the probability of the occurrence of specific traits, including sex-linked traits, in an offspring by using a monohybrid cross	2	1–2
<b>Changes in Ecosystems and Interactions of Organisms with their Environments Strand</b>				
Organisms are interdependent with one another and with their environment	All populations living together within a community interact with one another and with their environment in order to survive and maintain a balanced ecosystem	Explain the nature of interactions between organisms in predator/prey relationships and different symbiotic relationships (i.e., mutualism, commensalism, parasitism)	1	1–3
		Explain how cooperative (e.g., symbiotic) and competitive (e.g., predator/prey) relationships help maintain balance within an ecosystem	2	1–2
Organisms are interdependent with one another and with their environment	Living organisms have the capacity to produce populations of infinite size, but environments and resources are finite	Identify and explain the limiting factors (biotic and abiotic) that may affect the carrying capacity of a population within an ecosystem	2	1–3
	The diversity of species within an ecosystem is affected by changes in the environment, which can be caused by other organisms or outside processes	Predict the impact (beneficial or harmful) a natural environmental event (e.g., forest fire, flood, volcanic eruption, avalanche) or human caused change (e.g., acid rain, global warming, pollution, deforestation, introduction of an exotic species) may have on the diversity of different species in an ecosystem	2	1–2

Appendix A: Target Point Distributions

<b>Big Idea</b>	<b>Concept</b>	<b>CLE</b>	<b>DOK Limit</b>	<b>Range of Points per CLE</b>
Matter and energy flow through the ecosystem	As energy flows through the ecosystem, all organisms capture a portion of that energy and transform it to a form they can use	Predict how the use and flow of energy will be altered due to changes in a food web	2	1–2
Genetic variation sorted by the natural selection process explains evidence of biological evolution	Reproduction is essential to the continuation of every species	Explain the importance of reproduction to the survival of a species (i.e., the failure of a species to reproduce will lead to extinction of that species)	1	1–2
	Natural selection is the process of sorting individuals based on their ability to survive and reproduce within their ecosystem	Identify examples of adaptations that may have resulted from variations favored by natural selection (e.g., long-necked giraffes, long-eared jack rabbits) and describe how that variation may have provided populations an advantage for survival	2	1–2
		Explain how environmental factors (e.g., habitat loss, climate change, pollution, introduction of non-native species) can be agents of natural selection	2	1–2

Big Idea	Concept	CLE	DOK Limit	Range of Points per CLE
<b>Missouri, United States, and World History Strand</b>				
Knowledge of continuity and change in the history of Missouri and the United States	Understand the migrations of people from many regions to North America	Describe the migrations of people from many regions of the world and the interactions of cultures and religious traditions that have contributed to America's history from Reconstruction to the present: a. motivations for immigration b. challenges to immigrants	3	3–4
	Political development in the United States	Analyze the evolution of American democracy, its ideas, institutions, and political processes from Reconstruction to the present, including: a. Reconstruction b. struggle for civil rights c. expanding role of government d. expanding participation in political processes	3	3–4
	Understanding economic concepts	Apply the following major economic concepts in the context of the historical period studied: a. natural resources, labor, and capital resources b. supply and demand (shortages and surpluses) c. business cycle d. government regulation and deregulation e. unemployment and full employment f. inflation and deflation g. savings and investment h. profit	3	2
	Principles and purposes of government	Explain the importance of the following principles of government since Reconstruction a. majority rule and minority rights b. constitution and civil rights c. checks and balances	2	4
	Processes of governmental systems	Analyze the roles and influence of political parties and interest groups since Reconstruction to the present	3	4

Appendix A: Target Point Distributions

Big Idea	Concept	CLE	DOK Limit	Range of Points per CLE
Knowledge of continuity and change in the history of Missouri and the United States	Economic development in the United States	Describe the historical development of the American economy, including a. impact of geographic factors b. role of the frontier and agriculture c. impact of technological change and urbanization on land, resources, society, politics, and culture d. changing relationships between government and the economy	2	3–4
	Understanding the roles of people, business, and government in the economic system of the United States	Analyze the roles people, business, labor unions, and government play in the U.S. economy: a. how monopolies affect people's lives and how they are regulated b. how boycotts, strikes, and embargoes affect trade and people's options c. monetary policy (why the Federal Reserve System influences interest rates and money supply) d. fiscal policy (government taxation and spending)	3	2
	Understanding functions and effects of economic institutions	Survey the functions and effects of major economic institutions of the U.S. economy, such as corporations, labor unions, and financial institutions	2	2
	Understanding the roles of the government in the U.S. economy	Identify the roles of government in the U.S. economy (defining and protecting property rights, maintaining competition, promoting goals such as full employment, stable prices, growth, and justice)	2	2
	Understanding relationships within places	Distinguish major patterns and issues with regard to population distribution, demographics, settlements, migrations, and cultures in the United States.	2	4
	Understanding relationships between and among regions	List and explain criteria that give regions their identities in different periods of U.S. history. Explain how and why regions change.	2	4

Appendix A: Target Point Distributions

Big Idea	Concept	CLE	DOK Limit	Range of Points per CLE
Knowledge of continuity and change in the history of Missouri and the United States	Foreign and domestic policy developments	Describe and evaluate the evolution of U.S. domestic and foreign policies from Reconstruction to the present, including a. isolationism b. immigration policy c. Manifest Destiny d. imperialism e. two world wars f. Cold War g. New Deal h. global interdependence	3	3–4
	Causes, comparisons, and results of major twentieth-century wars	Examine the wars of the twentieth century pertinent to U.S. history, including causes, comparisons, consequences, and peace efforts	2	3–4

## Appendix G: Training PowerPoints

### Training #1: Basic Overview

---

**END-OF-COURSE (EOC)  
ASSESSMENTS**

*Training #1:  
Basic Overview*

2016-2017 Missouri Department  
of Elementary and Secondary Education

### Training Participants

- District Test Coordinators (DTCs)
- School Test Coordinators (STCs)
- District and School Technology Coordinators
- Test Examiners
  - Classroom teachers
  - Special education teachers
  - Translators
  - Proctors
  - Other district personnel who help with test administration

## Additional EOC Trainings

- EOC Trainings are also available for:
  - After Testing
  - Alternative Testing Formats
  - Blueprints and Timing Guidelines
  - EOC Process
  - Important Dates to Remember
  - Practice Tutorials & Pre-Tests
  - Test Tickets
  - Testing Day
  - Testing Issues
  - Universal Tools and Accommodations
  - Using iTester Admin
  - Who Is Tested

## Accessing the Trainings

- DESE Assessment webpage under EOC training
  - <http://dese.mo.gov/college-career-readiness/assessment/end-course>
- iTester Admin page under the Help tab
  - <http://moeoc.questarai.com/Admin>

## Subjects Tested

Required

- Algebra I
- English II
- Government
- Biology

Optional (For Local Use)

- \*Algebra II
- Geometry
- English I
- American History
- Physical Science

## Testing Timelines

Administration	Pre-Code Due By	Students In iTester By	Students Can Test By
Fall 2016 10/3/16 – 1/20/17	9/16/16	9/26/16	10/3/16
	11/4/16	11/15/16	11/21/16
Spring 2015 2/20/17 – 5/26/17	1/27/17	2/13/17	2/20/17
	3/3/17	3/17/17	3/20/17
	3/31/17	4/14/17	4/17/17

DTCs must specify the district assessment windows for each content area. Districts have 7 business days per content area to administer the assessments. Once the district testing window has ended, iTester will close and no further tests will be accessible without contacting Questar.

## Costs for EOC Assessments

- Required:
  - Algebra I - \$1.80
  - English II - \$1.80
  - Biology - \$1.80
  - Government - Free

## Reminders

- Resources to consult:
  - The Test Administration Manual (TAM)
  - 2016-2017 LEA Guide to the Missouri Assessment Program
  - DESE EOC Website
    - <http://dese.mo.gov/college-career-readiness/assessment/end-course>
  - Your District Testing Coordinator (DTC)

**Training #2: Universal Tools & Accommodations**

---

**END-OF-COURSE (EOC)  
ASSESSMENTS**

*Training #2:  
Universal Tools & Accommodations*

2016-2017 Missouri Department  
of Elementary and Secondary Education

## Universal Tools & Accommodations

- Two categories:
  - Universal Tools
  - Accommodations
- There are no accommodations for use on EOCs that cause an invalidation

## Universal Tools

- **Universal Tools**
  - Available to all students taking EOC assessments, unless otherwise noted
  - Some tools are only for use by English Language Learner (ELL) students (ELL students are those marked LEP-RCV or LEP-NRC in Core Data)
  - Some tools need to be marked in iTester prior to the assessment. Please read the description to determine if the tool must be marked in iTester.

## Universal Tools

Tool	Description	Code
<b>Bilingual Dictionary</b>	ELL students may have access to a physical Bilingual Dictionary for use ONLY on the Writing Prompt for the English I and English II assessments. If the Bilingual Dictionary is electronic, it may not connect to the internet.  This tool must be chosen in the iTester system under student accommodations prior to testing.	S431
<b>Break (Pause)</b>	All students may take breaks of up to 20 minutes as needed. There is no limit to how many times a student may use this during an assessment.  If a student hits the pause button, they will be logged out. They can log back in anytime that same day. If the assessment needs to be reopened on a subsequent day, the district will need to call help desk.  If the need arises to move a student from one computer to another, pause the test to exit. The test will remain incomplete until the student logs back in and completes the test.	N/A
<b>Color Contrast – Paper</b>	All students taking the paper/pencil assessment may have the test printed in different colors based on student needs or preferences.  This tool must be chosen in the iTester system under student accommodations prior to testing.	S102

## Accommodations

- Accommodations
  - Must appear in an IEP or 504 plan
  - Some accommodations are only for use by English Language Learner (ELL) students (ELL students are those marked LEP-RCV or LEP-NRC in Core Data) with an IEP/504
  - All accommodations need to be marked in iTester prior to the assessment

## Accommodations

- Accommodations for Missouri EOCs aligned to new accommodations being used for the MAP Grade-Level assessments
- Greater flexibility in providing accessibility for all students

## EOC Read Aloud

- All directions and items in any subject, except ELA reading passages, may be read by a trained reader
- Read aloud of an ELA reading passage requires an IEP or 504 plan
- Decision to read aloud should be made by educators who work with the student on a regular basis
- DESE does not recommend the use of Read Aloud for students who do not use it as part of their everyday learning in the classroom. The use of Read Aloud for some students can prove distracting and become a hindrance to student performance
- Completed in a small group or individual setting

## Text-To-Speech (TTS)

- As a new feature this year, the iTester platform allows students to have the test directions and items read aloud via embedded text-to-speech technology
- The student can control the speed and volume of the voice
- Students should have multiple exposures or practice using the synthetic voice in TTS. If districts or students are not comfortable with TTS, they can still use a Human Reader.
- The TTS tool must be turned on in the system prior to testing

**Training #3: Blueprints & Timing Guidelines**

**END-OF-COURSE (EOC)  
ASSESSMENTS**

*Training #3:  
Blueprints & Timing Guidelines*

2016-2017 Missouri Department of Elementary and Secondary Education

**Blueprints – Algebra I**

**Blueprint for ALGEBRA I**

Category	Code	Target	Point Range	Range Of Emphasis
Number & Quantity	HSN-RN.A	The Real Number System	2-4	5-10%
	HSN-Q	Quantities		
Algebra	HSA-SSE	Seeing Structure In Expressions	14-21	35-53%
	HSA-APR	Arithmetic With Polynomials And Rational Expressions		
	HSA-CED	Creating Equations		
	HSA-REI	Reasoning With Equations And Inequalities		
Functions	HSF-IF	Interpreting Functions	11-20	28-50%
	HSF-BF	Building Functions		
	HSF-LE	Linear, Quadratic And Exponential Models		
Stats & Prob	HSS-ID	Interpreting Categorical And Quantitative Data	3-6	8-15%
<b>Total</b>			<b>40</b>	<b>100%</b>

**Performance Event:** Each year the performance event may align to any specific conceptual category or to a group of them. The Performance Event is worth 10 points.

## Blueprints – Algebra II

### Blueprint for ALGEBRA II

Category	Code	Target	Point Range	Range Of Emphasis
Number & Quantity	HSN-CN	The Complex Number System	0-4	0-10%
Algebra	HSA-SSE	Seeing Structure In Expressions	16-22	40-55%
	HSA-APR	Arithmetic With Polynomials And Rational Expressions		
	HSA-CED	Creating Equations		
	HSA-REI	Reasoning With Equations And Inequalities		
Functions	HSF-IF	Interpreting Functions	18-24	45-60%
	HSF-BF	Building Functions		
	HSF-LE	Linear, Quadratic And Exponential Models		
Stats & Prob	HSS-ID	Interpreting Categorical And Quantitative Data	0-6	0-15%
	HSS-MD	Using Probability To Make Decisions		
<b>Total</b>			<b>40</b>	<b>100%</b>

## Blueprints – Geometry

### Blueprint for GEOMETRY

Category	Code	Target	Point Range	Range Of Emphasis
Geometry	HSF-CO	Congruence	34-40	85-100%
	HSG-SRT	Similarity, Right Triangles And Trigonometry		
	HSG-C	Circles		
	HSG-GPE	Expressing Geometric Properties With Equations		
	HSG-GMD	Geometric Measurement And Dimension		
	HSG-MG	Linear, Quadratic And Exponential Models		
Stats & Prob	HSS-CP	Conditional Probability And The Rules Of Probability	0-6	0-15%
	HSS-MD	Using Probability To Make Decisions		
<b>Total</b>			<b>40</b>	<b>100%</b>

## Blueprints – English I

### Blueprint for ENGLISH I

Claim	Category	Big Idea	Point Range	Range Of Emphasis
Reading	Claim 1a	Apply reading skills to demonstrate the ability to integrate key ideas and details, interpret and analyze the craft and structure of texts, and evaluate the knowledge and ideas found in literary texts	15	33%
Reading	Claim 1b	Apply reading skills to demonstrate the ability to integrate key ideas and details, interpret and analyze the craft and structure of texts, and evaluate the knowledge and ideas found in informational text	15	33%
Writing	Claim 2a	Demonstrate the ability to produce a variety of text types and purposes	10	22%
Writing	Claim 2b	Demonstrate a command of the conventions of standard English, appropriate grade-level acquisition of vocabulary	5	11%
<b>Total</b>			45	100%

## Blueprints – English II

### Blueprint for ENGLISH II

Claim	Category	Big Idea	Point Range	Range Of Emphasis
Reading	Claim 1a	Apply reading skills to demonstrate the ability to integrate key ideas and details, interpret and analyze the craft and structure of texts, and evaluate the knowledge and ideas found in literary texts	15	33%
Reading	Claim 1b	Apply reading skills to demonstrate the ability to integrate key ideas and details, interpret and analyze the craft and structure of texts, and evaluate the knowledge and ideas found in informational text	15	33%
Writing	Claim 2a	Demonstrate the ability to produce a variety of text types and purposes	10	22%
Writing	Claim 2b	Demonstrate a command of the conventions of standard English, appropriate grade-level acquisition of vocabulary	5	11%
<b>Total</b>			45	100%

## Blueprints – Biology

### Blueprint for BIOLOGY

Content Strand	Point Range	Range Of Emphasis
Characteristics and Interactions of Living Organisms	20-24	36%-44%
Changes in Ecosystems and Interactions of Organisms with their Environments	12-14	22%-25%
Scientific Inquiry	20	36%
<b>Total</b>	<b>55</b>	<b>100%</b>

## Blueprints – Physical Science

### Blueprint for PHYSICAL SCIENCE

Content Strand	Point Range	Range Of Emphasis
Properties And Principles Of Matter And Energy	25-30	55-66%
Properties And Principles Of Force And Motion	15-20	33-44%
<b>Total</b>	<b>45</b>	<b>100%</b>

## Blueprints – Government

### Blueprint for GOVERNMENT

Content Strand	Point Range	Range Of Emphasis
Principles of Constitutional Democracy	18-22	45%-55%
Principles and Processes of Governance Systems	18-22	45%-55%
<b>Total</b>	<b>40</b>	<b>100%</b>

## Blueprints – American History

### Blueprint for AMERICAN HISTORY

Reporting Categories	Point Range	Range Of Emphasis
Government	7-9	18%-23%
History	14-18	35%-45%
Economics	7-9	18%-23%
Geography	7-9	18%-23%
<b>Total</b>	<b>40</b>	<b>100%</b>

## Timing Guidelines

Content	Time Suggestions
English II	Session I: 90 – 110 min / Session II: 90 – 110 min
Algebra I	Session I: 90 – 110 min / Session II: 60 - 70 min
Biology	Session I: 55 – 60 min / Session II: 65 - 70 min
English I	Session I: 90 – 110 min / Session II: 90 – 110 min
Algebra II	90 – 110 min
Geometry	90 – 110 min
American History	60 – 80 min
Government	60 – 80 min
Physical Science	60 – 80 min

**Training #4: Important Dates**

**END-OF-COURSE (EOC)  
ASSESSMENTS**

*Training #4:  
Important Dates*

2016-2017

Missouri Department of Elementary and Secondary Education

## Important Dates

- Please check the DESE website often for updates
  - [dese.mo.gov](http://dese.mo.gov) → MAP → EOC → Important Dates

## Important Dates

Administration	Dates	Event
Fall 2016	<b>DUE</b> September 16, 2016	Fall 2016 First Precode (students available in iTester 9/26/16 - students may begin testing 10/3/15)
	October 3, 2016 to January 20, 2017	<b>Fall 2016 Window</b>
	<b>DUE</b> November 4, 2016	Fall 2016 Second Precode (students available in iTester 11/15/16 - students may begin testing 11/21/16)
Spring 2017	<b>DUE</b> January 27, 2017	Spring 2017 First Precode (students available in iTester 2/13/17 - students may begin testing 2/20/17)
	February 20, 2017 to May 26, 2017	<b>Spring 2017 Window</b>
	<b>DUE</b> March 3, 2017	Spring 2017 Second Precode (students available in iTester 3/17/17 - students may begin testing 3/20/17)
	<b>DUE</b> March 31, 2017	Spring 2017 Third Precode (students available in iTester 4/14/17 - students may begin testing 4/17/17)

## Important Dates

- Inform parents/ guardians of upcoming testing dates
- Minimize schedule conflicts
- Students participate when they complete associated course content

## Important Dates

- 7 business days for each content area
- Identify a window for each content area
- Tests with more than one session are not required to be completed in the same day

## Timing Guidelines

Content	Time Suggestions
English II	Session I: 90 – 110 min / Session II: 90 – 110 min
Algebra I	Session I: 90 – 110 min / Session II: 60 - 70 min
Biology	Session I: 55 – 60 min / Session II: 65 - 70 min
English I	Session I: 90 – 110 min / Session II: 90 – 110 min
Algebra II	90 – 110 min
Geometry	90 – 110 min
American History	60 – 80 min
Government	60 – 80 min
Physical Science	60 – 80 min

**Training #5: Who is Tested?**

**END-OF-COURSE (EOC)  
ASSESSMENTS**

*Training #5:  
Who is Tested?*

2016-2017 Missouri Department of Elementary and Secondary Education

## Who is Tested?

- Students participate when they complete associated course content

Required	Optional (For Local Use)
Algebra I	*Algebra II
Biology	American History
English II	English I
Government	Geometry
	Physical Science

## Who is Tested?

- Missouri Option students
- Homebound students
- MoVIP students

## Who is Exempt from Testing?

- Students eligible for MAP-A
- ELL students who have been in the United States for less than 12 cumulative months may be exempt from ELA assessments

## Questions about Exemptions?

- Contact DESE's Accountability Data office at (573) 526-4886
- Keep track of each student's EOC completions
- See the EOC History Report on MCDS Portal

## Optional Populations

- Foreign Exchange Students
- Homeschooled Students
  - ▣ Make sure to check the Homeschool Box

**Training #6: A Step-by-Step Process**

---

## END-OF-COURSE (EOC) ASSESSMENTS

*Training #6:  
A Step-by-Step Process*

2016-2017 Missouri Department  
of Elementary and Secondary Education

## A 13-Step Process

- 1. Training Participants
- 2. Setting Up iTester
- 3. Site Setup
- 4. Selecting Students
- 5. Determining Content Windows
- 6. Pre-Coding
- 7. Final Preparations
- 8. Special Considerations
- 9. Accessing the Practice Tutorials
- 10. Printing Test Tickets
- 11. Testing
- 12. Closing a Window Early
- 13. Individual Student Reports

## Step 1: Training Participants

- District Test Coordinator (DTC)
- School Test Coordinator (STC)
- Test Examiner (TE)
- Other district personnel involved in testing
  - View appropriate recorded trainings
  - Review the Test Administration Manual (TAM)

## Step 2: Setting up iTester

- iTester Administration site opens on:
  - 9/26/16 (Fall)
  - 2/15/17 (Spring)
  - After these dates, DTCs & STCs can create testing sessions
- District IT staff should log in and download the latest version of the iTester student client and run workstation readiness tests

## Step 3: Site Setup

- IT staff confirms that the building is ready for testing
- STC or DTC confirms that within iTester Admin

## Step 4: Selecting Students

- Who will test during the window?
  - Students who have completed the Missouri Learning Standards for the appropriate course and content

## Step 5: Determining Content Windows

- 7 business days for each content
- Content windows can be separate or overlap
- Must fall within the state testing window

## Step 6: Pre-coding

- ❑ Populates students into iTester
- ❑ Determine which pre-code window works best for your district
- ❑ Pre-code during the window that accommodates your first anticipated content window

## Step 7: Final Preparations

- ❑ Students are enrolled in the correct content area
- ❑ Students are enrolled with correct test examiner
- ❑ Changes can be made to student information and groups
- ❑ Students can be manually added

## Step 8: Special Considerations

- Paper/Pencil, Braille or Large Print assessments must be marked prior to testing
  - Braille and Large Print tests need to be ordered at least one week prior to testing
  - Paper/Pencil tests must be downloaded by the DTC and printed prior to testing
- Other accommodations should be entered prior to testing

## Step 9: Accessing the Practice Tutorials

- Students should be given ample time to access the tutorials
- Students who are testing in an assessment that has a performance event or writing task, should review and practice the tools multiple times
- Become familiar with the way the system works
- Become familiar with the tools
- Can be accessed at any time

## Step 10: Printing Test Tickets

- iTester allows for batch printing of tickets
- Distribute prior to testing
- Will need session code if more than one session
- Collect and securely destroy tickets after testing

## Step 11: Testing

- Once all preparations are made it's time to assess
- Refer to the timing guidelines for each content
  - These are general timing estimates
    - For example, 60-80 minutes
  - Please plan accordingly
- Answers from Paper/Pencil, Large Print and Braille tests must be entered into the system prior to the close of the 7 day window

## Step 12: Closing a Window Early

- 7 day window, if a district finishes early they may close the window
- 5 day turn around on results begins the business day after the window closes
- To close a window early contact Questar at:
  - (800) 571-2545

## Step 13: Individual Student Reports

- Five business days after the close of the district content window
- DTCs can download student scores from the Reports tab
- Individual Student Reports (ISRs) are available to download and print at the district level.

**Training #7: Using iTester Admin**

---

**END-OF-COURSE (EOC)  
ASSESSMENTS**

*Training #7:  
Using iTester Admin*

2016-2017 Missouri Department  
of Elementary and Secondary Education

**iTester Administration vs. Questar Secure Browser**

- iTester is the system used to manage and deliver the EOC Online Assessments. iTester consists of two main applications:
  - **iTester Admin**—An administrative web site used by test coordinators and Examiners to manage users and test sessions, student testing records, marking accommodations and other tasks before, during, and after testing
  - **Questar Secure Browser**—(formerly known as iTester Student) A test-delivery application used by students to take their tests. It is a Java-based application that must be installed on each student workstation before testing begins

## iTester Administration Login

- iTester Admin can be accessed at:  
<http://moeoc.questarai.com/Admin/>
- If you cannot remember your username/password, use the “Can’t Login” button found at the bottom of the Sign In box
- If you do not have a login, please contact the EOC Help Desk at 800-571-2545

## iTester Admin – Materials Ordering

58

- Click on the Materials Ordering tab to order
  - Large print test
  - Braille test

## iTester Admin - Examiners

59

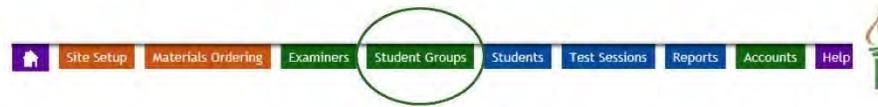

- Under the Examiners tab you can add examiners
- Examiners are divided by subject
- Examiners may be listed in more than one area
- Edit examiners name, email and content areas

## iTester Admin – Student Groups

60

- In the Student Groups tab you can view groups scheduled to test in a subject
- Create a new student group
- Move a student to a new group

## iTester Admin - Students

61

- ❑ In the Students tab you can view students across all subjects and students not assigned to a student group
- ❑ View students who are assigned to test in a subject
- ❑ Add/Edit students
  - ❑ Any changes made to student demographics must also be made in DESE's MOSIS system.
  - ❑ Change or add content area to be tested

## iTester Admin – Test Sessions

62

- ❑ Test Sessions
  - ❑ Filter By Testing Status: Testing Status for Algebra I, Fall 2015-16

- All
- In Progress
- Finished
- Not Started

School	Examiner/Student Group	Testing Status		
QA1 Test 01 Alpha High (1001)	Alpha, Teacher	Not Started	<a href="#">View Details/Student Logins</a>	<a href="#">Delete</a>

## iTester Admin – Test Sessions Cont.

63

- Marking Tools/Accommodations/Status Codes
  - Click on Test Sessions tab
  - Click on the View Details/Student Logins
  - Click the Set link under the Student Accommodations and Status Codes in the appropriate row
  - In the pop-up window, choose the box next to the supports/accommodations and/or status codes
  - Click Submit button to save information

## iTester Admin – Test Sessions Cont.

64

- Printing Student Logins
  - Click on View Details/Student Logins link
  - Information sorts by last name
  - Click the Print Student test logins link above the table to view and/or print the student test logins.
  - Choose Print from the File menu to display the options dialog box for the printer.

## iTester Admin - Reports

65

- Reports
  - View Individual Student Reports
  - Print individual Student Reports
  - Download list (Excel CSV)
  - Order printed reports

## iTester Admin - Accounts

66

- Accounts tab
  - Create new accounts for test administrators
  - User Types
    - DTC- District Test Coordinator
    - DITC- District Information Technology Coordinator
    - STC- School Test Coordinator
    - SITC- School Information Technology Coordinator
    - Examiner- Examiner or Test Administrator

## iTester Admin – Help Tab

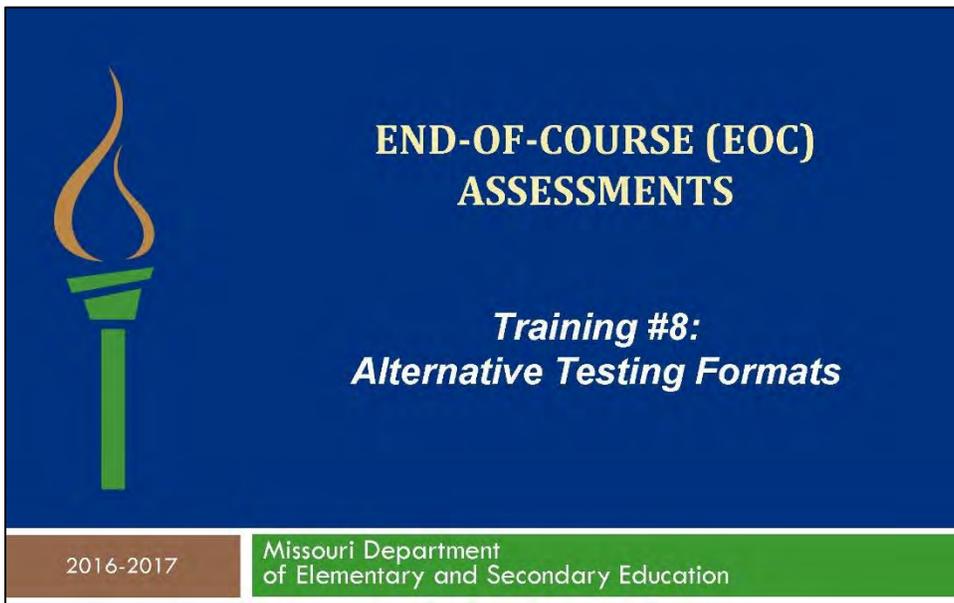

- Under the Help tab you can find manuals, trainings and other resources for EOC Assessments

The screenshot shows a horizontal navigation menu with the following items: Home, Site Setup, Materials Ordering, Examiners, Student Groups, Students, Test Sessions, Reports, Accounts, and Help. The 'Help' tab is highlighted with a green circle and a small torch icon.

### Training #8: Alternative Testing Formats

---

**END-OF-COURSE (EOC)  
ASSESSMENTS**

*Training #8:  
Alternative Testing Formats*

2016-2017 Missouri Department of Elementary and Secondary Education

The slide features a blue background with a green torch icon on the left. The text is centered in white and yellow. A footer bar at the bottom is split into a brown section with the year '2016-2017' and a green section with the department name.

## Large Print or Braille

- To order Large Print or Braille editions please contact Questar at:
  - (800) 571-2545
  - [MOCustomerSupport@questarai.com](mailto:MOCustomerSupport@questarai.com)
- Order at least one week prior to testing
- Accommodations codes
  - A012 for Braille
  - A021 for Large Print

## Paper/Pencil Editions

- Paper/Pencil edition of the test is available for:
  - Students with an IEP that says the student should take the Paper Based Assessment
  - Students who are out-of-district
  - Homebound students who cannot come to school to test
  - For ELL Translation when the translator needs to do translation prior to assessing the student due to technical language
- Use Accommodation code A102 for all scenarios

## Downloading Paper/Pencil Editions

- ❑ DTC downloads and prints Paper/Pencil Editions
- ❑ Individual test for each student
- ❑ Cannot be saved to a computer or downloaded multiple times and must not be copied for any reason

## After Testing

- ❑ Must immediately be transcribed into iTester
- ❑ Paper/Pencil assessments must be returned no later than 24 hours after the testing window closes
- ❑ Use shipping materials from Questar

## Returning Hard Copy Tests

- DTC is accountable for 100% of the returned shipment of each Paper/Pencil, Braille and Large Print test.
- Report all Paper/Pencil, Braille, and Large Print assessments on the Test Book Accountability form
  - Instructions in the back of the TAM and in the Help tab in iTester Admin

### **Training #9: Practice Tutorials and Pre-Tests**

---

**END-OF-COURSE (EOC)  
ASSESSMENTS**

***Training #9:  
Practice Tutorials and Pre-Tests***

2016-2017 Missouri Department of Elementary and Secondary Education

A blue rectangular slide with a large torch icon on the left. The text is centered and reads "END-OF-COURSE (EOC) ASSESSMENTS" in bold yellow, followed by "Training #9: Practice Tutorials and Pre-Tests" in bold white. At the bottom, there is a brown bar with "2016-2017" and a green bar with "Missouri Department of Elementary and Secondary Education".

## Practice Tutorials

- ❑ Tutorials are available in Questar Secure Browser for students to practice using the tools within the system
- ❑ Open year round
- ❑ Login information in the TAM and on DESE EOC Page
  - ❑ <http://dese.mo.gov/college-career-readiness/assessment/end-course>

CONTENT	USERNAME	PASSWORD
Algebra I	MOALG1	practice
Algebra II	MOALG2	practice
Geometry	MOGEO	practice
Biology	MOBIO	practice
Physical Science	MOPHYS	practice
English I	MOENG1	practice
English II	MOENG2	practice
American History	MOAMHIST	practice
Government	MOGOV	practice

## Pre-Tests - Online

- ❑ Online Pre-Tests
  - ❑ Released EOC Forms
  - ❑ No specific testing window
  - ❑ Districts enroll students directly through iTester
  - ❑ If a student is precoded, a Pre-Test is available for them
  - ❑ Automatically scores selected response
  - ❑ Scores returned to districts within 24 hours of test submission
- ❑ Pretests are available at no charge

## Pre-Tests - PDF

- PDF form
  - Located in iTester under the Help tab or on DESE EOC Page
  - Last page includes the answer key and alignment of each item
  - Allows students to be familiar with the types of questions they can expect to encounter

## Pre-Tests Enrollment

- Two ways that students are enrolled for the Pre-Tests:
  - **For students included in the operational precode**  
The operational enrollment file is also loaded into the pre-test administration. This means there will be a pre-test scheduled for each student included in the operational enrollment file, and nothing further needs to be done.
  - **For students NOT included in the operational precode**  
In order to enroll additional students in the pre-tests, meaning those excluded from the operational precode file, districts either must enter the student manually in iTester admin or create a pre-test enrollment file which must contain unique students who have yet to be created either in a previous precode file or manually.

## Accessing Pre-Tests

- Each student will be given a unique username and password
- Login information is generated and printed on test tickets
- Pre-Tests can be reset by the DTC

## Pre-Test Results

- CSV file with raw scores available 24 hours after student submission
- Data for pre-tests available for 20 business days
- Pre-Test ISRs (for multiple choice) also available
- Pretests with a writing prompt or performance event
  - Locally scored using provided rubrics and scoring materials
  - Supplement to the TAM and brief training webinar are posted to iTester under the Help tab

**Training #10: Test Tickets**

---

**END-OF-COURSE (EOC)  
ASSESSMENTS**

*Training #10:  
Test Tickets*

2016-2017 Missouri Department  
of Elementary and Secondary Education

## Test Tickets

- In order to test in iTester each student needs a test ticket with the following login credentials:
  - Username (MOSIS ID)
  - Password
  - Session access code

## Test Tickets

- May be printed on:
  - Plain paper
  - Avery labels (5160)
- In iTester, click on Test Sessions tab
  - View a list of registered students
  - Print tickets by student group

## Test Tickets

- If a student is not listed:
  - STC or DTC creates a profile
  - Register student in a student group
  - Login information will be generated

## Test Tickets

- When students log in have them check the ticket to verify their MOSIS ID
- Have them verify the on-screen information:
  - Name
  - MOSIS ID
  - Date of Birth
  - Grade
  - Teacher Name
  - School Name

### Training #11: Test Day Materials

---

## END-OF-COURSE (EOC) ASSESSMENTS

*Training #11:  
Test Day Materials*

2016-2017 Missouri Department of Elementary and Secondary Education

## Test Day Materials

- Required materials
- Permitted but not provided materials
- Prohibited materials while testing
- Calculator Policy

## Test Day: Required Materials

- Workstation with internet access
- Student login information
- Scratch paper for all assessments
- Unlabeled grid or graph paper for Math and Biology assessments
- Writing utensil

## Test Day: Permitted Materials

- ❑ Hard copy of Mathematics Reference sheet
- ❑ Hard copy of the Periodic Table of Elements
- ❑ Calculators that meet TAM guidelines (Math only)
- ❑ ELA writing task only
  - ❑ Dictionary
  - ❑ Thesaurus
  - ❑ Grammar handbook
  - ❑ Bilingual dictionary for ELL students

## Test Day: Prohibited Materials

- ❑ Electronic devices that can connect to the internet or to anyone inside or outside the classroom
  - ❑ Cell Phones
  - ❑ Electronic Music Players
  - ❑ Digital Cameras
  - ❑ Handheld Scanners
  - ❑ Portable Gaming Devices
- ❑ Cell Phones
  - ❑ Collect and return

## Test Day: Prohibited Materials

- Students who have devices for health monitoring may have those devices in the room but they should not be accessed by the student unless it is necessary to monitor their ongoing health

## Test Day: Calculator Policy

- DESE does not provide, endorse, or recommend a list of calculator brands or types
- Calculators cannot contain stored equations or functions at the time of the End-of-Course Mathematics Assessments.
- Test Examiners are responsible to ensure and verify that calculators that have the ability to store functions and equations, e.g., a graphing or a scientific calculator, have the memory cleared before and after each Mathematics Assessment.
- Calculators cannot have Internet connectivity

**Training #12: Possible Testing Issues**

---

**END-OF-COURSE (EOC)  
ASSESSMENTS**

*Training #12:  
Possible Testing Issues*

2016-2017 Missouri Department  
of Elementary and Secondary Education

### **Moving Students: In, Out or Within the District**

- If A Student Moves:
  - Into the district
    - Add them manually
    - If you can't add them, contact Questar Customer Service
  - Out of the district prior to testing
    - Remove student from student group
    - Do not log into test
    - Do not mark any status codes
  - From building to building
  - Keep documentation
  - See page 15 of the TAM

## Student Drops

- If a student was enrolled in an EOC, but later drops the course:
  - Remove from the student group in iTester
  - Do not:
    - Log into the test
    - Mark any status codes

## Absent Student or Incomplete Test

- All students should take the entire EOC assessment
  - However, is a student is:
    - absent
    - not ready to test
    - has an incomplete EOC
      - Follow the procedures on page 16 of the TAM

## Moving Students: Disruption or Illness

- Student may need to move during testing because of disruption or illness
  - Procedures are in the TAM
  - Pause the test
  - Escort the student to a new location
  - Login the student to a new workstation with the same operating system

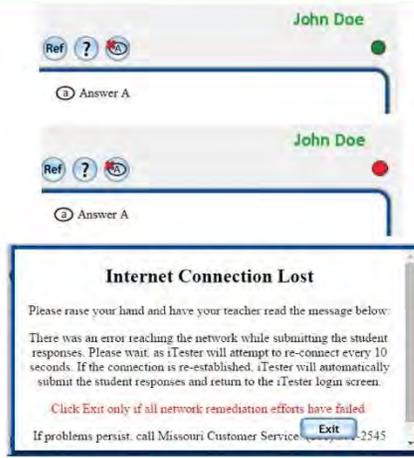

## Loss of Internet Connection

- Students test in iTester Student
- Tests download to a student's workstation
- In the event of a lost connection:
  - Do NOT turn off the student's device
  - Contact Questar at (800) 571-2545
  - Track student's status in iTester Admin and ensure they submit their tests for scoring following each test session

## Loss of Internet Connection-continued

- ❑ As a new feature this year, if Internet connection is lost, a small green dot on the corner of the screen will turn red
- ❑ If this happens, contact Questar’s customer service
- ❑ If you are using a portable device, do not close out, leave the testing platform open until connectivity is restored and then continue testing

## Invalidation

- ❑ Tests are not invalidated because of:
  - ❑ Students behavior
  - ❑ Judgment of student effort
- ❑ Only Invalidated because of cheating
  - ❑ Only the DTC can invalidate a test
  - ❑ Has to be done before the 7 day window closes

**Training #13: After Testing**

---

**END-OF-COURSE (EOC)  
ASSESSMENTS**

*Training #13:  
After Testing*

2016-2017 Missouri Department  
of Elementary and Secondary Education

## After Testing

102

- DTC responsibilities:
  - 100% return of all Paper/Pencil, Braille and Large Print
  - Questar will audit the returned shipments
  - Use the Test Book Accountability Form
  
- Securely Destroy Immediately
  - Test Tickets
  - Scratch paper

## After Testing

105

- Downloading results
  - Located in iTester Admin
    - Download, save, and print the Individual Student Reports (ISRs)
- Questar will send student score labels after the statewide window has closed
- Districts have 15 days to notify parents or guardians that ISRs are available

## After Testing

104

- Guide to Interpreting Results is available on DESE's website
- The Guide to Interpreting Results contains information regarding:
  - Scale scores
  - Achievement level descriptors
  - Standard error of measurement
  - Sample reports
  - Examples of student labels

## Appendix H: Accommodation Codes

### Accommodations

These accommodations for the End-of-Course Assessment are available only to students with an IEP/504 plan.

Please note:

- All accommodations need to be marked in iTester prior to the assessment.
- Some accommodations are only for use by English Language Learner (ELL) students with an IEP/504 plan (ELL students are those marked LEP-RCV or LEP-NRC in MOSIS).

Accommodation	Description	Code
<b>Abacus</b>	Students with this accommodation in their IEP/504 plan may have access to an abacus. This accommodation must be chosen in the iTester system under student accommodations prior to testing.	A391
<b>Alternate Response Options</b>	Students with this accommodation in their IEP/504 plan may respond to items using an alternate option, including but not limited to: Adapted Keyboards, StickyKeys, MouseKeys, FilterKeys, Adapted Mouse, Touch Screen, Head Wand, and Switches. This accommodation must be chosen in the iTester system under student accommodations prior to testing.	A441
<b>Braille</b>	Students with visual impairments with this accommodation in their IEP/504 plan may access the assessment via a Braille version. Tactile overlays and graphics tools may be used to assist the student in accessing the content. <i>Please Note: Answers from students who access the assessment using the Braille format must be entered into iTester prior to shipping the Braille assessment back. Please follow the instructions found in the Braille kit.</i> This accommodation must be chosen in the iTester Admin Students tab under special forms and also via the Test Sessions tab under student accommodations prior to testing. See page 38 for additional instructions.	A012
<b>Large Print</b>	Students with visual impairments with this accommodation in their IEP/504 plan may access the assessment via a Large Print version. <i>Please Note: Answers from students who access the assessment using the Large Print format must be entered into iTester prior to shipping the Large Print assessment back. Please follow the instructions found in the Large Print kit.</i> This accommodation must be chosen in the iTester Admin Students tab under special forms and also via the Test Sessions tab under student accommodations prior to testing. See page 38 for additional instructions.	A021
<b>Multiplication Table</b>	Students with this accommodation in their IEP/504 plan may have access to a single digit multiplication table. This accommodation must be chosen in the iTester Admin Test Sessions tab under student accommodations prior to testing.	A395

Accommodation	Description	Code
<b>Paper Based Assessment</b>	<p>Students with this accommodation in their IEP/504 plan may take the assessment using the paper/pencil format.</p> <p><i>Please Note: Answers from students who access the assessment using the Paper/Pencil format must be entered into iTester prior to shipping the Paper assessment back. Please follow the instructions found in the return kit.</i></p> <p>This accommodation must be chosen in the iTester Admin Students tab under special forms and also via the Test Sessions tab under student accommodations prior to testing. See page 38 for additional instructions.</p>	A102
<b>Read Aloud (ELA Reading Passages) – Human Reader</b>	<p>Students with this accommodation in their IEP/504 plan, taking the online, paper/pencil, Large Print, or Braille assessments may have the ELA Reading Passages read aloud by a human reader.</p> <p><i>Please Note: The Human Reader should be familiar to the student and have read aloud experience with the student in some capacity prior to the state assessment.</i></p> <p>This accommodation must be chosen in the iTester Admin Test Sessions tab under student accommodations prior to testing.</p>	A045
<b>Read Aloud (ELA Reading Passages) – Assistive Technology</b>	<p>Students with this accommodation in their IEP/504 plan, who use specific text-to-speech assistive technology software in the everyday classroom, may use that technology in conjunction with the iTester testing platform to have the ELA Reading Passages read aloud by the software. The software must be provided by the district.</p> <p><i>Please Note: The use of assistive technology software should be familiar to the student and should be software the student uses in the everyday classroom.</i></p> <p><i>Please Note: While the use of assistive technology software is not directly supported by Questar, the help desk will work with districts needing to use the software.</i></p> <p>This accommodation must be chosen in the iTester system under student accommodations prior to testing.</p>	A044
<b>Read Aloud (ELA Reading Passages) – Native Language</b>	<p>ELL students with this accommodation in their IEP/504 plan, taking the online, paper/pencil, Large Print, or Braille assessments may have the ELA Reading Passages read aloud to them in their native language by a human reader.</p> <p>This accommodation must be chosen in the iTester Admin Test Sessions tab under student accommodations prior to testing.</p>	A112
<b>Read-Aloud (ELA Reading Passages) – Blind Students</b>	<p>Blind students who do not yet possess adequate Braille skills with this accommodation in their IEP/504 plan may have the ELA Reading Passages read aloud by a human reader.</p> <p>This accommodation must be chosen in the iTester Admin Test Sessions tab under student accommodations prior to testing.</p>	A046
<b>Specialized Calculator</b>	<p>Students with this accommodation in their IEP/504 plan may have access to a specialized calculator. The specialized calculator can include a talking calculator or Braille calculator among others. The memory of the physical calculator must be cleared before and after testing by the test examiner.</p> <p>This accommodation must be chosen in the iTester Admin Test Sessions tab under student accommodations prior to testing.</p>	A396

Appendix H: Accommodation Codes

Accommodation	Description	Code
