High School Algebra 1

Introduction

In 2014 Missouri legislators passed House Bill 1490, mandating the development of the Missouri Learning Expectations. In April of 2016, these Missouri Learning Expectations were adopted by the State Board of Education. Groups of Missouri educators from across the state collaborated to create the documents necessary to support the implementation of these expectations.

One of the documents developed is the item specification document, which includes all Missouri grade level/course expectations arranged by domains/strands. It defines what could be measured on a variety of assessments. The document serves as the foundation of the assessment development process.

Although teachers may use this document to provide clarity to the expectations, these specifications are intended for summative, benchmark, and large-scale assessment purposes.

Components of the item specifications include:

**Expectation Unwrapped** breaks down a list of clearly delineated content and skills the students are expected to know and be able to do upon mastery of the Expectation.

**Depth of Knowledge (DOK) Ceiling** indicates the highest level of cognitive complexity that would typically be assessed on a large scale assessment. The DOK ceiling is not intended to limit the complexity one might reach in classroom instruction.

**Item Format** indicates the types of items used in large scale assessment. For each expectation, the item format specifies the type best suited for that particular expectation.

**Text Types** suggests a broad list of text types for both literary and informational expectations. This list is not intended to be all inclusive: other text types may be used in the classroom setting. The expectations were written in grade level bands; for this reason, the progression of the expectations relies upon increasing levels of quantitative and qualitative text complexities.
High School Algebra 1

**Content Limits/Assessment Boundaries** are parameters that item writers should consider when developing a large scale assessment. For example, some expectations should not be assessed on a large scale assessment but are better suited for local assessment.

**Sample stems** are examples that address the specific elements of each expectation and address varying DOK levels. The sample stems provided in this document are in no way intended to limit the depth and breadth of possible item stems. The expectation should be assessed in a variety of ways.
# Number and Quantity

## A1.1

### Extend and use properties of rational exponents.

**Expectation Unwrapped** – the intent of this section is to describe the elements of the expectation, but are NOT additional standards or expectations.

The student will explain the properties of exponents, including rational exponents.

The student will articulate in words the properties of exponents using rational exponents.

### DOK Ceiling

2

### Item Format

- Selected Response
- Constructed Response
- Technology Enhanced

### Sample Stems

- \( \frac{1}{x^2} \cdot x^5 = x^{\frac{7}{10}} \)
- \( \frac{1}{x^2} = x^{\frac{1}{4}} \)
- \( \left( \frac{1}{x^5} \right)^5 = x \)

### Content Limits/Boundaries for State Assessment; However Should be Included in Classroom Instruction

Limit rational exponent numerators to one and rational exponent denominators to natural numbers less than or equal to ten in the prompt; however the response may have numerators greater than one.

Items may have algebraic or numeric expressions.

### Calculator Designation

YES – a calculator will be available for items

</tbody>
</table>

**Expectation Unwrapped** – the intent of this section is to describe the elements of the expectation, but are NOT additional standards or expectations.

The student will find the maximum value of a quadratic (the \( y \) coordinate of the vertex) function by completing the square.

The student will find the minimum value of a quadratic (the \( y \) coordinate of the vertex) function by completing the square.

The student will understand that the vertex of an equation in the form \( y = a(x - h)^2 + k \) is \((h, k)\).

---

**Content Limits/Boundaries for State Assessment; However Should be Included in Classroom Instruction**

Given \( ax^2 + bx + c \), Limit \( b \) to even integers.

---

**Calculator Designation**

YES – a calculator will be available for items
### Expectation Unwrapped

The intent of this section is to describe the elements of the expectation, but are NOT additional standards or expectations.

- The student will create linear equations in one variable and use them to model and/or solve problems.
- The student will create quadratic equations in one variable and use them to model and/or solve problems.
- The student will create exponential equations in one variable and use them to model and/or solve problems.
- The student will create linear inequalities in one variable and use them to model and/or solve problems.

### Content Limits/Boundaries for State Assessment; However Should be Included in Classroom Instruction

In exponential relationships when solving for the exponent, limit bases to 2, 3, 5, and 10, and limit exponents to 1, 2, 3, and 4.

Limited to linear inequalities.

## Interpreting Functions

### A1.IF.C.7

<table>
<thead>
<tr>
<th>IF</th>
<th>C</th>
<th>7</th>
</tr>
</thead>
</table>

Analyze linear, quadratic and exponential functions using different representations.

Graph functions expressed symbolically and identify and interpret key features of the graph.

### Expectation Unwrapped

- **The student will graph linear functions expressed symbolically and identify and interpret key features of the graph by hand and by using technology.**
- **The student will graph quadratic functions expressed symbolically and identify and interpret key features of the graph by hand and by using technology.**
- **The student will graph exponential functions expressed symbolically and identify and interpret key features of the graph by hand and by using technology.**
- **The student will graph simple piecewise functions (linear, simple quadratic, and simple exponential) expressed symbolically and identify and interpret key features of the graph by hand and by using technology.**

### Content Limits/Boundaries for State Assessment; However Should be Included in Classroom Instruction

Do not assess piecewise functions.

### DOK Ceiling

2

### Item Format

- Selected Response
- Constructed Response
- Technology Enhanced

### Sample Stems

Do not assess piecewise functions.

### Calculator Designation

YES – a calculator will be available for items
## Interpreting Functions

Analyze linear, quadratic and exponential functions using different representations.

Translate between different but equivalent forms of a function to reveal and explain properties of the function and interpret these in terms of a context.

### Expectation Unwrapped

*the intent of this section is to describe the elements of the expectation, but are NOT additional standards or expectations.*

The student will translate between different but equivalent forms of a function to reveal and explain properties of the function.

The student will interpret different but equivalent forms of a function in terms of a context.

### Content Limits/Boundaries for State Assessment; However Should be Included in Classroom Instruction

Limit quadratics to forms that are factorable and Limited to cases where the $a$ value is one and the $b$ value is even when completing the square.

Limit exponentials to the form $y = ab^x$, where $b$ is rational and greater than zero.

### Calculator Designation

YES – a calculator will be available for item
## Interpreting Functions

**A1.IF.C.9**

Analyze linear, quadratic and exponential functions using different representations.

Compare the properties of two functions given different representations.

### Expectation Unwrapped – the intent of this section is to describe the elements of the expectation, but are NOT additional standards or expectations.

The student will compare the properties of two functions (both linear, both exponential, or both quadratic) given different representations.

The student will compare the properties of two different types of functions (linear, quadratic, and/or exponential) given different representations.

**Expectation Unwrapped** – the intent of this section is to describe the elements of the expectation, but are NOT additional standards or expectations.

The student will construct a scatter plot of bivariate quantitative data and determine the type of function that models the relationship.

The student will construct a linear function to model the bivariate data on a scatter plot that minimizes residuals (distance from the mean) using calculation and/or technology.

**Content Limits/Boundaries for State Assessment; However Should be Included in Classroom Instruction**
Outliers in the data should be obvious.
On a multiple choice question, there should not be more than one answer choice that is closely related to the distance from the mean.

**Calculator Designation**
YES – a calculator will be available for items
### Data and Statistical Analysis

#### A5.b

<table>

<td>Interpret the slope (rate of change) and the $y$-intercept (constant term) of a linear model in the context of the data.</td>
</tr>
</tbody>
</table>

**Expectation Unwrapped** – the intent of this section is to describe the elements of the expectation, but are NOT additional standards or expectations.

The student will interpret the slope (rate of change) of a linear model in the context of the data.

The student will interpret the $y$-intercept (constant term) of a linear model in the context of the data.

**DOK Ceiling**

| 2 |

**Item Format**

### A1.DS.A.8

<table>
<thead>
<tr>
<th>Data and Statistical Analysis</th>
<th>Summarize, represent and interpret data.</th>
</tr>
</thead>
</table>

#### Expectation Unwrapped

- The intent of this section is to describe the elements of the expectation, but are NOT additional standards or expectations.

- The student will distinguish between correlation and causation.

- The student will understand and explain that a strong correlation does not imply causation.

| DOK Ceiling | 2 |

#### Sample Stems

- Tall individuals tend to also have large feet. *(correlation)*

- When you exercise more minutes, the number of calories burned will increase. *(causation)*

#### Content Limits/Boundaries for State Assessment; However Should be Included in Classroom Instruction

- Limit assessment items to interpreting correlation coefficients given.

| Calculator Designation | YES – a calculator will be available for items |
