

## Computer Programming

| Unit                            | Objectives   |
|---------------------------------|--|
| Data Structure Concepts         | <ol style="list-style-type: none"><li>1 Create a program using a list</li><li>2 Create a program using one- and two-dimensional arrays</li><li>3 Create a program using a sort routine</li><li>4 Create file structures</li><li>5 Describe database structures (e.g., fields, records, files, and tables)</li><li>6 Write code to append, delete, and update a table or a file</li><li>7 Create a database file with one or more tables for manipulation by program code</li><li>8 Write code to search, sort, and query a data structure</li></ol>  |
| Logical Problem-Solving Skills  | <ol style="list-style-type: none"><li>1 Analyze a problem</li><li>2 Determine the steps needed to solve a problem</li><li>3 Create an algorithm to solve a problem</li><li>4 Illustrate the problem solution using a storyboard, flowchart or pseudocode</li><li>5 Build a program from a storyboard, flowchart, or pseudocode</li><li>6 Explain how to create and integrate reusable component into a program</li><li>7 Explain how a program is tested and accepted for release</li><li>8 Document code.</li></ol>   |
| Program Algorithms              | <ol style="list-style-type: none"><li>1 Use correct syntax and naming conventions of a given programming language</li><li>2 Create a program using internal documentation</li><li>3 Identify the use and limitations of different data types (integer, double, and constant)</li><li>4 Create programs that include: variables and constants; counters and accumulators; arithmetic operations and functions; conditional statement; loop instruction; required user input; input validation; opening, writing, and reading from a data file; producing formatted output; modular program using one or more methods; that passes data to methods using parameters</li><li>5 Identify type of errors (e.g. syntax, run-time and logic)</li><li>6 Create a program with a standard graphic user interface (GUI) that includes: objects and menus; and a custom GUI</li><li>7 Modify an existing program</li><li>8 Create a program in collaboration with a team</li><li>9 Describe and practice steps of troubleshooting and debugging</li></ol> |
| Additional Programming Concepts | <ol style="list-style-type: none"><li>1 Discuss considerations in programming for efficiency (e.g., computer time, programmer time, etc.)</li><li>2 Discuss how to create a user-friendly program</li><li>3 Describe event-driven programming</li><li>4 Describe error catching/handling</li><li>5 Compare object-oriented programming with structured programming</li><li>6 Describe and/or practice mobile application programming</li><li>7 Discuss handicap accessibility considerations in programming</li><li>8 Create a program using multimedia</li><li>9 Practice programming for efficiency</li><li>10 Practice error catching/handling</li></ol>  |

## Computer Programming

| Unit                   | Objectives   |
|------------------------|--|
| Computer Concepts      | <ol style="list-style-type: none"><li>1 Trace the development of computers and their impact on society</li><li>2 Describe the categories and evolution of programming languages</li><li>3 Explain the functions of computer hardware and architecture</li><li>4 Demonstrate an understanding of computer theory (e.g., bits, bytes, binary logic, memory, and storage)</li><li>5 Compare computer operating systems (e.g., DOS, Windows, Linux, Android)</li><li>6 Discuss legal/ethical issues related to computers</li><li>7 Identify the application environment/interface for the specific language being covered (e.g., JCreator, BlueJay, and Visual Studio)</li><li>8 Explain the concept of security and its relationship to programming</li><li>9 Identify components of the information system model (input, process, output, storage)</li><li>10 Identify types of Network (Internet, LANs, and Wireless)</li></ol> |
| Prepare for Employment | <ol style="list-style-type: none"><li>1 Demonstrate working as a team</li><li>2 Search the web and other places to locate career-planning information and job opportunities related to programming</li><li>3 Identify careers in the information technology field</li><li>4 Demonstrate communication skills</li><li>5 Demonstrate logical thinking</li><li>6 Demonstrate interpersonal skills</li><li>7 Create a resume</li><li>8 Demonstrate good interview skills</li><li>9 Exhibit leadership skills through a student organization (e.g. FBLA, PBL, ACM)</li></ol>  |
