

Draw a ~~simple~~ model that represents the solution to this equation: $15 \times 1\frac{1}{3}$

Example 2

a) $16 \cdot \frac{3}{4} =$

Plot the solution to each equation on the given number line. Then

b) $16 \cdot 1\frac{1}{4} =$

explain why one solution is greater than 16 and one is less than 16.
