

Use numbers 1 through 9, at most 1 time each, to make a true equation where "x" has the largest possible value

$$\square\square + x = \square\square$$

$$x = \square\square$$

Ans:

Example 2:

$2x + 6 > 12$ A set has the following values $\{2, 4, 6, 8\}$
Which of the values in this set make the inequality true?
