

Example 2:

Sarah says the product of

$$\left(-\frac{1}{3}\right) \cdot \left(\frac{9}{8}\right) = -\frac{8}{27}$$

do you agree?

What was Sarah's error?

Example 3:

A car traveled at the same speed for 734.2 miles. The car drove for 12 hours. How fast was the car driving in mph? Round to the nearest tenth.

Example 4:

Tom bought $2\frac{1}{4}$ lbs of bananas. Each lb cost \$0.52. How much did Tom spend on bananas?
