

TEAM

TRAINING EXPERTS IN AUTISM FOR MISSOURI

FREE Professional Development for Educators

What is the TEAM Education Program?

TEAM trainings offer support and tools for autism educators in Missouri to help you implement evidence-based interventions in your classrooms and improve student outcomes. We offer large-group and classroom-specific trainings, coached practice, feedback, and consultation — and it's free.

How much will the TEAM Education Program cost our school or district?

Trainings and follow-up visits are FREE to Missouri schools and districts.

What are the TEAM training options?

We develop tailored training plans based on the unique needs of your school district or classroom.

- District-level trainings build capacity for structuring autism programs and monitoring the success of classroom interventions.
- Classroom-level training plans address specific program needs with research-supported practices.
- One-on-one follow-up sessions with professionals ensure student outcomes and program quality meet your goals for improvement.

What can we expect from TEAM trainings?

We work directly with district personnel to assess current autism programming. In classrooms, we ask educators to get parental consent for videotaping and data collection so we can offer specific feedback. After initial training sessions, we continue to collect data on training content and staff evaluations of the trainings.

TEAM Program developers and trainers:

Dr. Stephen Kanne, PhD, ABPP
Executive Director

Dr. Jena K Randolph, Ph.D.
Assistant Research Professor

Dr. Karen O'Connor, Ph.D., BCBA
Assistant Research Professor

Thompson Center
For Autism & Neurodevelopmental Disorders
University of Missouri
